3363.TWO - FOCI (上詮)

Full investment research | Model assumptions and source evidence

Framework 8.0 update · Research cutoff: 12 October 2026 · Q3 revenue reported; profitability estimated

Status: Integrated original research and approved earnings model; evidence qualifications remain active.

Classification: OPTICAL-ASSEMBLY BOTTLENECK - qualified fiber attachment and manufacturing yield

Portfolio Excel Base: 78/100. Analytical Base: 78/100 (47/60).

Q4 2027 model price target: TWD 2,256.65 per share. Financial amounts: TWD millions unless stated otherwise. Price targets: TWD per share.

The price target uses one active operating case. New forward evidence is evaluated under Rule 16b; its probability is not applied again to the final price target. Portfolio Base and the analytical category score are distinct; the latter does not overwrite the former.

1. Thesis, products and competitive position

BOTTLENECK. FOCI supplies the physical fiber-to-chip interface, optical attachment and intra-system fiber connections. Its reflow tolerance and alignment expertise serve the DB1 optical transition. The opportunity extends from current scale-out deployments toward scale-up and higher-channel packaging. The relevant company wallet is FAU, attachment and fiber content, not the value of a complete optical engine or switch.

Fiber attachment as a physical production problem

FOCI supplies fiber-optic components and assemblies. Its silicon-photonics opportunity centers on precisely connecting fibers to photonic devices, including fiber-array units and related coupling/attachment processes. Alignment accuracy, insertion loss, thermal stability, reflow compatibility and automated throughput determine whether a design can be manufactured reliably.

The original research connects this work to RFA and COUPE-related integration. Those architecture references describe potential customer process roles; they do not establish that FOCI captures the value of a full optical engine. A qualified FAU, an engineering design-in, a customer production order and an accepted shipped assembly are distinct evidence levels.

Scale, substitution and the conditional revenue bridge

Thailand commissioning and customer-directed shipment schedules must be evaluated alongside yield and product gross profit. The current actual anchor shows why this matters: rising sales alone are insufficient when the photonics mix has not produced the modeled profitability. The very large later optical-packaging forecast remains conditional because a complete unit, ASP and line-throughput bridge is not disclosed.

Alternative coupling approaches, including glass-based integration and more automated attachment, could complement FOCI's process or displace some supplied content. The correct test is the actual customer design and supplier role, not a blanket assumption that every glass architecture bypasses fiber attachment. The model keeps captured assembly economics separate from the broader optical component and system TAM.

Research provenance: the product and competitive analysis in this section synthesizes the supplied original research. Dated market-share, process and channel claims retain their original evidence status; this integration is not a new independent verification of those claims. Current earnings and model assumptions are set out below.

2. Earnings, guidance and operating assumptions

Latest actual financial anchor

Q2 2026 revenue is TWD 429.188M, GP 0.979M and operating loss 91.973M, versus H1 revenue 811.157M, GP 8.176M and operating loss 248.050M. Q2 net loss 24.861M is smaller because of nonoperating income and tax; it is not operating profit. Source: FOCI-1. The reported Q2 product mix is 78% patch cord, 12% optical components, 9% SiPh/CPO packaging and 1% other. These percentages are rounded; only consolidated totals are exact.

Management sequence and near-term model

The May and September management decks both distinguish line construction from customer-required delivery. The September deck specifies small Q3 contributions, customer-led quarterly increases from Q4,3.2T and 6.4T(+) FAUs, more than five package designs delivered and more than five additional customer design-ins. Thailand small-volume commercial production is listed for Q4. These are technical and timing milestones; no revenue or OP guidance is supplied. Sources: FOCI-2,3.

The original MOPS monthly statements report **July TWD 170.843M, August 204.482M and September 224.257M**, totaling **Q3 revenue 599.582M**. September grew 28.38% year over year. Nine-month revenue 1,410.739M less H1 811.157M independently reconciles to the same Q3 total. This is a monthly-sales disclosure, not a reported Q3 income statement. Product mix, gross margins and operating expenses remain model assumptions; July's preliminary net loss does not establish Q3 OP. [FOCI-7]

The existing Q4 formula remains August x 3 x 1.20, now **736.1352M** using the precise August input. This is an analytical delivery assumption, not company guidance. The higher reported Q3 sales also feed the existing 2026 legacy-product bases. In the retained reference trajectory, the higher legacy bases allocate slightly less of the total to the SiPh residual. The active case now also subtracts the explicit competitive-output risk below. The monthly revenue itself supplies no separate bearish optical forecast.

Rule 16b disposition: reported Q3 sales enter at 100%. For the narrower forward hypothesis that September's monthly rate persists through Q4, assign a subjective 60% probability, with a constant-rate conditional quarter of 672.771M. The existing 736.1352M quarterly case is already above that run rate, so modeled overlap is 100% and the additional revenue/cost/OP contribution from this persistence signal is zero. No extra optical premium or capacity gain is inferred from consolidated monthly sales. The next discriminating evidence is accepted optical shipments, product mix and Q3 gross profit. This signal does not validate the much larger, already conditional 2027-30 total-revenue path.

Competitive capacity and captured output

An October 12 foreign-broker roundup reports that FOCI's capacity and scale may lag Corning, TFC and Largan despite rapid market growth. It relays a projected share decrease from 15% in 2026 to 8% in 2028. The bank is unnamed and the relevant product, geographic and share denominator is unspecified. This is an attributed competitive-capacity breadcrumb. It is not a demonstrated 46.7% loss of FOCI sales and no broker target or rating is imported. [FOCI-8]

Source evidence beside the modeled case: the delivered Mandarin text says that demand grows quickly but FOCI's capacity may not keep pace, and compares its manufacturing scale with the named peers. No source image was attached to this post. The complete delivered text and immutable record are retained with the source package; this paragraph is a faithful paraphrase, not a fabricated screenshot.

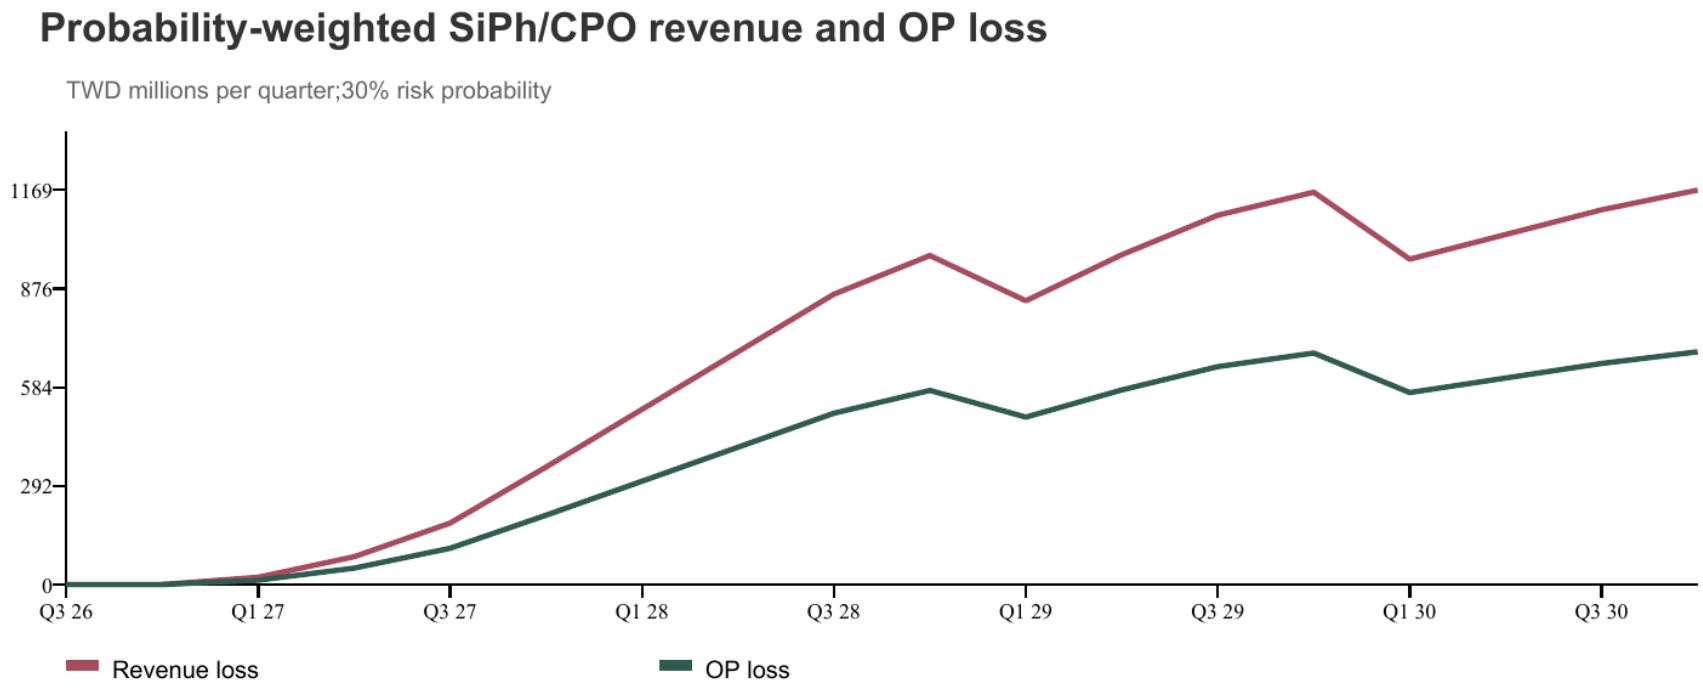

Delivered Mandarin excerpt (unaltered):

3363上詮：美系降評

美系大行表示儘管市場需求成長速度非常快，但觀察上詮的產能恐怕難以追上需求成長速度，因為其產能與生產規模無法與康寧、TFC，甚至大立光等同業相比。預估市占率將從2026年的15%下降至2028年的8%，降評至EW。

Probability: 30%. One credible local report supports a nonzero competitive-output risk before confirmation. The bank identity, product-share scope, supplier allocation and qualified output remain unresolved. The outcome is lower captured SiPh/CPO output relative to the retained reference, beginning in 2027. Conditional lost output is 5%, 10%, 15% and 20% in Q1-Q4 2027, 25% throughout 2028, 20% in 2029 and 15% in 2030. The full-phase diagnostic range is 10-35%. These rates and timing are ASTRA's bounded proxy assumptions, not the source's numerical revenue forecast. Q4 2026 operating revenue and profit receive no loss because the claim concerns later relative expansion rather than a demonstrated reduction in initial shipments. Its forward-four-quarter target nevertheless includes the affected 2027 quarters.

Incremental bridge: reference SiPh revenue × conditional captured-output loss × 30% probability × (1 - 0% overlap). Production costs saved equal 35% of that lost revenue, leaving a 65% gross-profit loss. Variable operating expenses saved equal the existing 6% of lost revenue, leaving a 59% operating-profit loss. Fixed operating costs and depreciation remain on their existing schedules. Legacy patch-cord, optical-component and other revenue, FX, share count, valuation window, 20x multiple and both Base scores stay unchanged. This is a new explicit competitive output risk; no separate GlassBridge, broad TAM or peer-benefit shock is added on top.

Competitive-output risk. TWD millions per quarter. ASTRA probability and loss-rate assumptions; no bank revenue forecast is imported.

Quarter	Reference SiPh	Conditional output loss	Weighted revenue loss	GP loss	OP loss
Q3 2026	71.95	0.0%	0.00	0.00	0.00

Q2 2030	23,044.78	15.0%	1,037.02	674.06	611.84
Q3 2030	24,669.78	15.0%	1,110.14	721.59	654.98
Q4 2030	25,969.78	15.0%	1,168.64	759.62	689.50

Revision tests: revise the probability and loss ramp on named customer allocations, qualified saleable units per line, accepted volume, reliable unit/ASP economics and matching competitor capacity. Retained or expanded FOCI awards and throughput sufficient to match the reference weaken this downside case. Missed output milestones, price concessions or displacement by an integrated competing assembly strengthen it. These tests concern captured units and company costs, not stock-price moves.

Risk probability	Q4 2027 target TWD
0.0%	2,504.58
15.0%	2,380.61

Risk probability	Q4 2027 target TWD
30.0%	2,256.65
50.0%	2,091.37
100.0%	1,678.17

The zero-probability row is a diagnostic control at the same quarter, currency, shares and 20x method. The active row uses 30%; probability is applied once to operating inputs, never again to the final target.

Revenue model and its limits

The long-range revenue trajectory before the competitive-output adjustment is a conditional portfolio Plan-B assumption. It is not presented as a fresh independent customer-order forecast. Patch cord grows 10% per year from the modeled 2026 base, optical components 15%, and other revenue is flat. Reference SiPh/CPO packaging is the residual required to reach that total. The active revenue line then subtracts probability-weighted competitive-output losses from that vector alone, leaving legacy products unchanged.

The retained 2028 reference total of USD 1,317M corresponds to TWD 42,802.5M at the frozen 32.5 translation factor. After the competitive-output loss, the active 2028 total is TWD 39,759.16M (USD 1,223.36M). Against the unchanged user-provided DB1 CPO ecosystem pool of USD 70.9B, the reference requires 1.86% of total system spending. The risk adjustment changes company capture, not ecosystem TAM. That calculation is a required-wallet check, not evidence of actual FOCI market share. The much wider optical-engine/FAU category cannot all be credited to FOCI. A complete unit/ASP/order bridge remains missing.

The disclosed TWD 1.538B equipment program does not state throughput or annual sales per invested dollar. It therefore cannot validate or mechanically cap this revenue path. Further line additions, customer allocation, yields, attachment fees and financing must be established. The current price target remains conditional until that bridge is available.

Margins and operating costs

The model separates the four disclosed product categories. The actual calibration uses group GP and OP, with proxy line margins because product GMs are not disclosed. Forward patch-cord GM reaches 20%, optical components 30% and other 10%. The reference SiPh/CPO GM path is 35%, 40%, 45%, 50% through 2027, 50% in 2028, then 48% and 45% in 2029-30. The active gross margin below also includes the capture-risk branch: only 35% of lost revenue is saved in production costs, so the loss of gross profit is 65% of lost revenue. Fixed production costs and depreciation do not disappear when output is lost. All forward margins are model assumptions, not reported economics.

Operating expense has a fixed component anchored to Q2 expense 92.952M with 20% annual growth, plus 6% of revenue for expanding engineering and commercial support. This makes cost growth visible and produces operating profit from product GP. Depreciation remains an operating cost; no EBITDA substitution is made.

Shares and valuation

June issued capital implies 113.6406M shares. The filing separately discloses 1.385M outstanding employee options. The forward all-option denominator is 115.0256M, with a visible issued-only sensitivity. This is a fully distributed proxy, not the reported diluted EPS denominator in a loss quarter. The February 10M-share capital raise is already inside issued shares and is not added again.

Price targets use forward four-quarter OP×20 divided by this share proxy, in TWD. The new evidence ledger separates probability, overlap and active economic contribution. Base is a thesis-quality score, not the probability of a contract or a discount applied to the price target. Future capital raises and new awards are not yet quantified.

3. Analytical score

The category arithmetic gives **47/60 = 78/100** after the -4-point risk deduction. The portfolio Excel Base remains **78/100**. Risk-class detail appears in section 7.

Category	Points	Maximum	Basis
Core thesis	16	20	Reflow-tolerant FAU integration, precision alignment and company patents; universal sole-source claim unverified.
Cycle stage	8	10	Q3 small shipments and customer-led Q4 ramp, before large-scale acceptance.
TAM expansion	9	10	Scale-out, scale-up and high-channel optical packaging share the alignment capability.
Catalysts	5	5	3.2T delivery, 6.4T qualification, automated line and Thailand commercial production.
Macro	9	10	AI interconnect and optical density demand.
Alpha	4	5	Local filing and September roadmap resolve facts missing from the model.
Risks	-4	0	Customer/program concentration; yield and commissioning; alternative coupling architectures; capture and financing uncertainty.

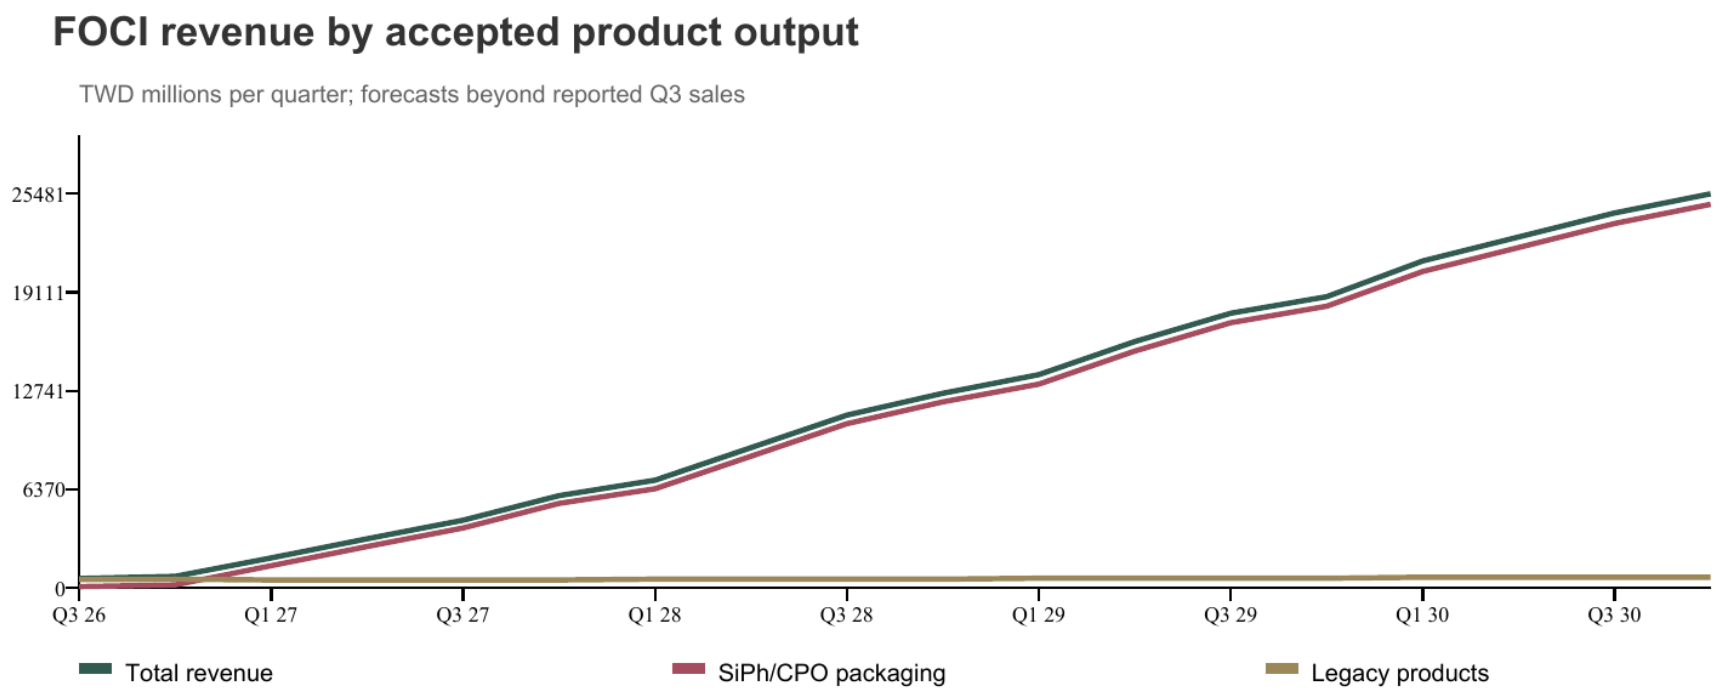

4. Product economics and quarterly operating model

Forecasts distinguish reported anchors from guidance and analyst assumptions. Where the model uses segment OP or an adjusted profit proxy rather than product GP less opex, the stated basis applies; do not treat those proxies as a newly disclosed GAAP decomposition.

Vector evidence

Vector	Source / derivation	Confidence
Patch cord	Q2 disclosed 78% mix; latest monthly revenue; analytical 10% annual growth	HIGH group/mix anchor; LOW forecast
Optical components	Q2 disclosed 12% mix; analytical 15% annual growth	HIGH rounded mix; LOW forecast
SiPh/CPO packaging	Q2 disclosed 9% mix and September roadmap; residual required to deliver the portfolio forward revenue trajectory	LOW; not an independently verified order forecast
Other	Q2 disclosed 1% mix; flat annual proxy	LOW

Product revenue build

FOCI active product-revenue path. TWD millions; quarterly forecasts retain the legacy-product assumptions and include only the stated captured-output risk.

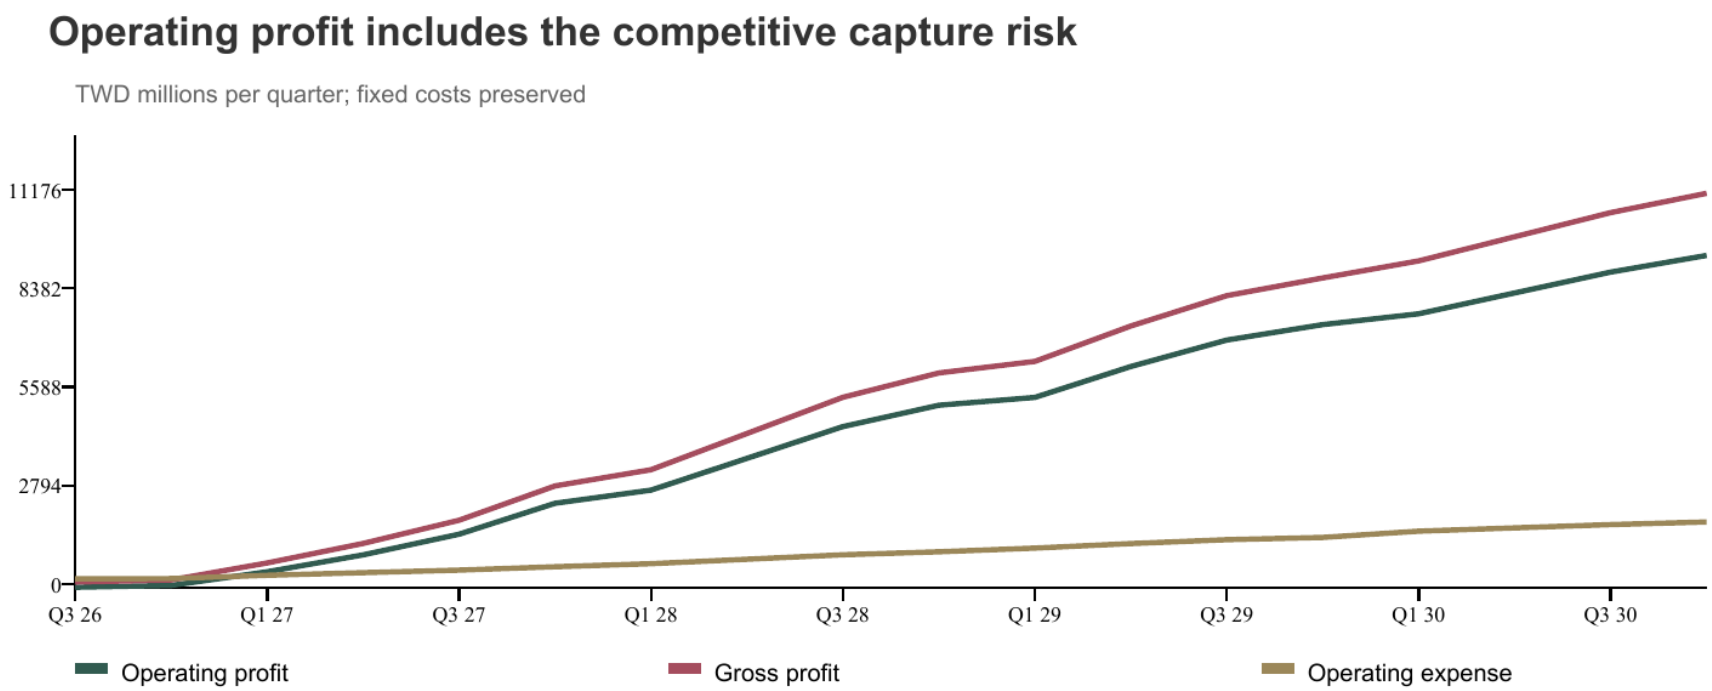

Quarter	Patch cord	Optical components	SiPh/CPO packaging	Other	Total

Q4 2028	Q4 2028 to Q3 2029	23,437.41	20	115.025600	4,075.16
Q1 2029	Q1 2029 to Q4 2029	25,722.08	20	115.025600	4,472.41
Q2 2029	Q2 2029 to Q1 2030	28,090.79	20	115.025600	4,884.27
Q3 2029	Q3 2029 to Q2 2030	30,175.15	20	115.025600	5,246.68
Q4 2029	Q4 2029 to Q3 2030	32,100.13	20	115.025600	5,581.39
Q1 2030	Q1 2030 to Q4 2030	34,060.12	20	115.025600	5,922.18

Q4 2027 exact chain: forward OP 12,978.648699979 × 20 ÷ 115.0256 = **TWD 2,256.653944857**. The probability-weighted OP loss in this same four-quarter window is 1,425.866976311M.

Mechanical share sensitivity

Holding the active Q4 2027 operating case fixed:

Economic denominator	TWD price target
Approved denominator	2,256.65
5% more shares	2,149.19
10% more shares	2,051.50

This is a denominator sensitivity, not a forecast of issuance or a different valuation method.

6. Industry relationships and read-throughs

WIN processes compound-semiconductor wafers, Soitec supplies engineered substrates and FOCI attaches optical components. Improvements in one layer do not prove another layer's margins. Use customer qualifications and accepted assembly volumes to connect the industry chain.

7. Risks and falsification tests

The four risk classes below account for the analytical risk deduction.

Risk class	Deduction
Customer and program concentration	-1
Yield, automation and commissioning	-1
Alternative coupling architectures	-1
Revenue capture, financing and diluted shares	-1
Total	**-4**

Cross-company learning, risks and triggers

FOCI, ShunSin and Nextronics capture different portions of optical-system content. Their revenues cannot each equal the complete system TAM. FOCI's later customer-acceptance dates should inform packaging and materials timing without assuming these companies supply one another.

Four risk classes are scored: concentrated customer programs, yields/commissioning, coupling substitution, and uncertain capture/financing. Triggers are Q3 product mix and GM, Q4 accepted customer shipments, 6.4T design-ins converting to orders, unit throughput per automated line, and named evidence that alternative glass coupling either includes or displaces FOCI. The counter-test is higher sales without SiPh GP improvement.

Numbered monitoring tests

#	Checkpoint	Evidence supporting the operating case	Counter-test / failure signal
1	Production shipments	Track accepted customer shipments and Q4 conversion against the model.	Engineering deliveries or design-ins alone do not prove a volume ramp.
2	Throughput and margin	Require units per line, utilization and optical-product GP evidence.	Higher revenue with weak SiPh GP fails the operating-leverage test.
3	Capture	Build an explicit FAU/assembly unit and ASP bridge to the later forecast.	A residual allocated from full-engine TAM leaves the revenue forecast unverified.
4	Substitution	Identify FOCI's role in a named alternative coupling design.	Demonstrated bypass reduces captured content; a generic glass announcement does not.

8. Sources, evidence gaps and model snapshot

Sources below document the reported financial anchors, management roadmap and attributed competitive-capacity claim. LOW-confidence product allocations, future margins, capacity bridges and incomplete management-call records remain unresolved where stated.

- **FOCI-1** · 2026-08-06 · Company H1 financial statements. Q2/H1 reported revenue, GP, OP; issued shares and 1.385M outstanding options.
- **FOCI-2** · 2026-09-02 / presented Sep 3-4 · Company Q2 investor presentation. Product mix, small Q3 shipments, Q4 customer-led ramp, technical roadmap and Thailand Q4 small-volume commercialization.
- **FOCI-3** · 2026-05-28 · Company Q1 investor presentation. Prior-period management comparison: automation, qualification and customer programs.
- **FOCI-4** · 2026-09-04 · Monthly revenue and July preliminary earnings report. August revenue around TWD 204M and July net loss 33M; rounded revenue anchor, net loss is not OP.
- **FOCI-5** · 2026-09-03 · Local report on disclosed FAU investment plan. TWD 1.538B equipment program, including 1.08B FAU equipment; no unit/hour throughput disclosed.
- **FOCI-6** · 2026-09-01 · User-provided framework and quarterly model - User upload: FOCI_Q_Model and Framework 6.0 DB1. Conditional long-range revenue path, 20x multiple and ecosystem TAM; historical pricing/capture assumptions not independently verified.

The unchanged original source document is retained separately for full research provenance. It is an archive, not an additional active valuation case. Superseded score/price target tables are not incorporated into this active artifact.

Model snapshot: current at 12 October 2026; 15 quarterly target endpoints from Q3 2026 through Q1 2030. Q4 2027 = TWD 2256.653944857; Q1 2028 = TWD 2739.601479134. Portfolio Excel Base 78 and analytical Base 78 are unchanged. Revenue, margin, cost and target calculations reconcile to FOCI_Q_Model.

- **FOCI-7 | Original MOPS monthly revenue statements**, retrieved October 6, 2026: MOPS, company 3363, ROC year 115, months 06/07/08/09. Reported in TWD thousands, divided by 1,000 for this artifact. The September event is TPEX-3363-REVENUE-202609 in DOT-EARNINGS-20261006 revision 2. Independent original retrieval exactly matched the submitted September HTML hash. Publication time is unknown; retrieval time is not a release timestamp.
- **FOCI-8 | October 12, 2026 broker roundup**, posted October 11 at 20:11 EDT: QQ_Timmy delivered post, run XDATA-20261012-0201-ET-QG3C revision R0. Unnamed U.S. bank competitive-capacity claim and 15% to 8% share forecast. Original bank note and share scope not obtained. No source image accompanied the post.
