3665.TW | Taiwan Stock Exchange | 2026-10-07

## Q4 2027 model ceiling: TWD 2,674.43

Analytical Base 46/60 = 77 | High Conviction

20x forward-four-quarter IFRS owner operating profit, less financial claims, with alternate convertible claims and diluted end-window shares

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in TWD m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: TWD 2,315.00 per share (2026-10-07); 199.578 million common shares (2026-10-07); estimated equity capitalization TWD 462,024.0 million. TWSE October 7 close and issued ordinary shares after the August 11 GDR issuance. This snapshot excludes modeled option and convertible dilution; no current treasury shares are deducted twice. This dated common-share snapshot is separate from forecast diluted shares.

## Decision in the model

| Active horizon | Earnings window | F4Q OP | Multiple | Diluted shares | Ceiling |
|---|---|---|---|---|---|
| Q4 2027 | Q4 2027 through Q3 2028 | 28,638.1 | 20x | 207.664 | 2,674.43 |

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

## Economic scope and matching claims

Consolidated operating profit less a TWD 2m quarterly minority reserve. Gross bank/lease and unpaid contingent claims deducted, no surplus-cash value added; cash is used in the funding bridge. Each convertible is debt OR shares, never both.. 20x forward-four-quarter IFRS owner operating profit, less financial claims, with alternate convertible claims and diluted end-window shares

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use TWD m unless a different unit is stated.

## Thesis

Research date: October 7, 2026. Security: BizLink Holding Inc., Taiwan Stock Exchange 3665, ordinary shares, valuation currency TWD. All financial tables use TWD millions unless labeled otherwise. The active Q4 2027 model ceiling is approximately TWD 2,674 per share, using 20x forward-four-quarter fully expensed operating profit with explicit financial claims and convertible dilution. The analytical Base is 77/100. These are independent model outputs, not management guidance or imported analyst targets.

## Investment thesis and what the customer buys

BizLink earns revenue by making difficult electrical and optical connections reliable, manufacturable and repeatable at scale. Its opportunity is broader than an optical connector: rack power, high-speed copper, fiber assembly, semiconductor-equipment wiring and increasingly integrated subassemblies all sit inside the company's existing business. Greater system complexity can raise engineering content and qualification costs even when the price of a basic connector falls.

The investment case begins with the established business. HPC represented 42% of Q2 2026 revenue, semiconductor equipment 14%, and the remaining industrial, mobility, medical and appliance portfolio 44%. The company has an operating history across many customers and production regions. That history can make it a useful engineering partner during a rushed platform transition. It does not establish monopoly pricing or guarantee that a prototype becomes a large program.

The September acquisition of Interplex Datacom adds mechanical and structural products used in server racks. The September ams OSRAM collaboration adds a possible route into parallel optical packaging. They are different events: Interplex is a closed transaction with immediate revenue consolidation; the optical collaboration is an early commercial possibility. The forecast gives the former a funded operating business and the latter a much smaller probability-weighted branch.

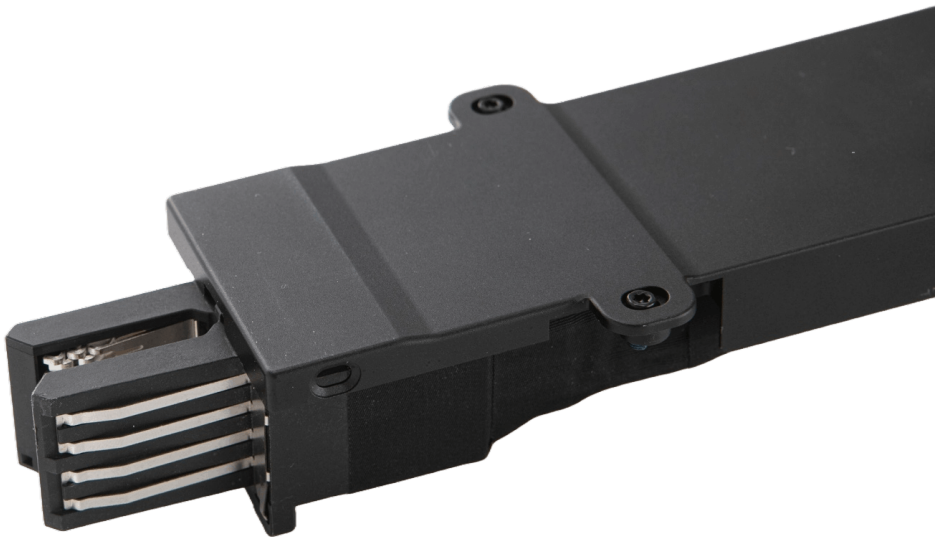

## Power, copper and optical economics

Increasing rack power raises current, resistive heating, connector contact requirements and the consequences of a weak termination. At a given delivered power, raising voltage reduces current, but that changes insulation, spacing, safety and qualification requirements. BizLink can sell busbars, power-shelf connectors, cable assemblies and the engineering work around them. It does not receive the entire power-shelf or rack invoice merely because its connector is essential.

The official MGX portfolio provides concrete examples. Its HPM busbar is specified for 48-54 VDC and maximum 300 A. The site also lists higher-current rack busbars and AC power whips. These are product-specific ratings. An existing low-voltage busbar photograph is not proof of a certified 800 VDC product. The June COMPUTEX release describes development supporting 800 VDC-related applications and future copper and optical interfaces; that is roadmap evidence, not a customer volume commitment. Official product specifications; MGX portfolio.

Copper remains valuable where its reach, power, latency and cost satisfy the channel budget. Active electrical cables add signal-conditioning silicon; BizLink's cable and assembly invoice must be kept separate from the retimer supplier's economics. Optics can improve reach and density but introduces alignment, cleanliness, test, laser coupling and repair requirements. A platform can therefore contain more copper, optical fiber and power connections at the same time. The model combines the power/copper deployment opportunity into one event to avoid treating each architecture discussion as another independent rack build.

The ams OSRAM demonstrator uses an addressable two-dimensional microVCSEL source at 850 nm with BizLink optical packaging and fiber-to-fiber connector capabilities. Its parallel architecture is a technical reason to investigate dense, repeatable assembly. It does not disclose a customer order, channel count, usable reach, BER target, package yield, assembly selling price or production ramp. BizLink's potential revenue is the qualified assembly and connector content. The laser die belongs to a different supplier wallet. September partnership announcement.

Original issuer exhibit | Official HPM busbar illustration. Published specifications are 48-54VDC and maximum 300A; it is not an 800V qualification certificate. The invoice is a power interconnect, not the complete rack.

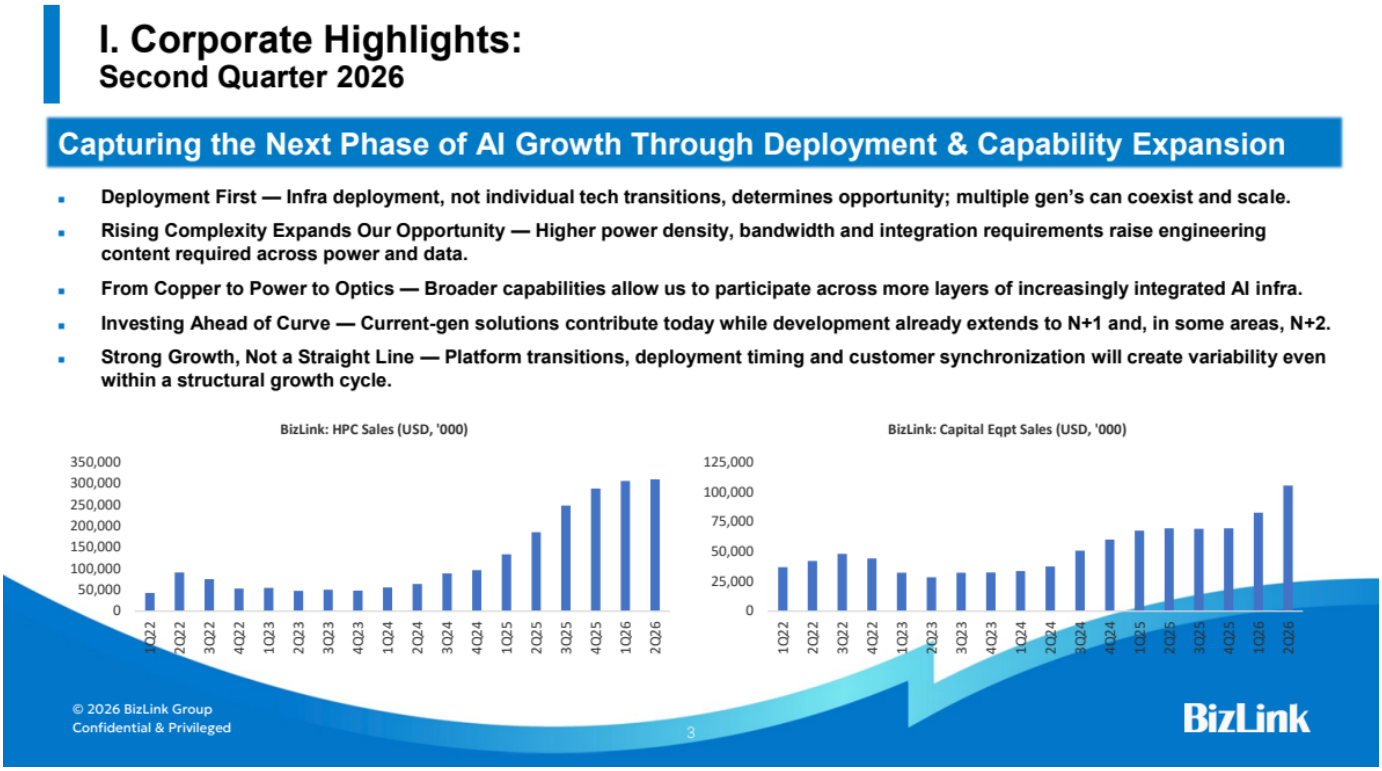

## The observed business and the reference model

The reviewed Q2 accounts reported revenue of TWD 23,281.188m, gross profit of TWD 7,154.196m, operating expense of TWD 3,144.254m and operating profit of TWD 4,009.942m. Gross margin was 30.73% and operating margin 17.22%. H1 operating profit was TWD 7,118.303m. The May discussion described platform-transition costs and raw-material pressure; the August discussion described better mix, utilization and efficiency. The recovery is already represented in the starting economics.

September monthly sales were US$294.199m, including only seven days of Interplex from September 23. July through September sum to US$872.120m. The current TWSE profile independently reports monthly TWD sales of 9,630.165m, 8,891.805m and 9,332.402m, totaling TWD 27,854.372m. This is the Q3 sales anchor. Q3 gross profit and operating profit are still estimates. Subtracting reviewed H1 sales from monthly year-to-date sales would produce a different result because the H1 monthly aggregate and reviewed accounts differ by TWD 34.284m; that reconciliation is retained as a gap. Issuer September release; TWSE profile.

The reference forecast is already a strong growth case. Existing HPC sales rise from the modeled TWD 13.0bn in Q3 2026 to TWD 61.4bn for 2027 and TWD 74.0bn for 2028. Equipment sales reach TWD 18.05bn in 2027. Other activities grow more slowly, while Interplex receives a separate revenue path anchored to its disclosed US$392m trailing sales through March 2026. Q3's small Interplex allocation is a seven-day revenue-rate estimate inside the observed consolidated total, not an additional amount added on top.

Quarterly revenue is also expressed as equivalent completed customer programs multiplied by an assumed invoice wallet. The HPC wallet proxy is TWD 250,000 per equivalent program, equipment TWD 500,000 and acquired mechanical kits TWD 200,000. These normalizations expose the economic driver; they are not reported rack shipments, actual prices or market share. A change in those proxies must preserve the observed revenue calibration and be checked against paid customer throughput.

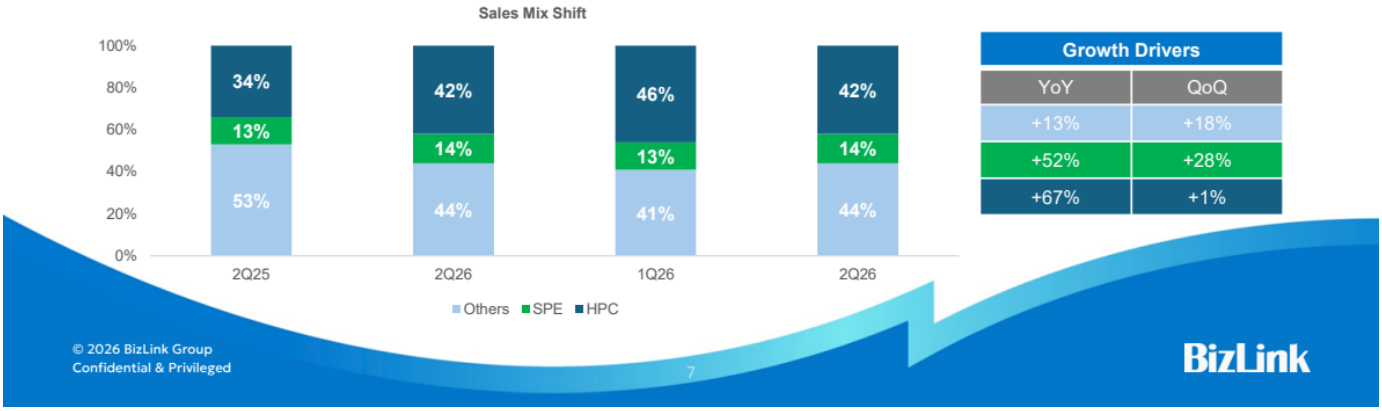

Original issuer exhibit | Issuer HPC and capital-equipment sales in USD thousands through Q2 2026. Their different trajectories constrain the forecast; no future values are implied by the chart.

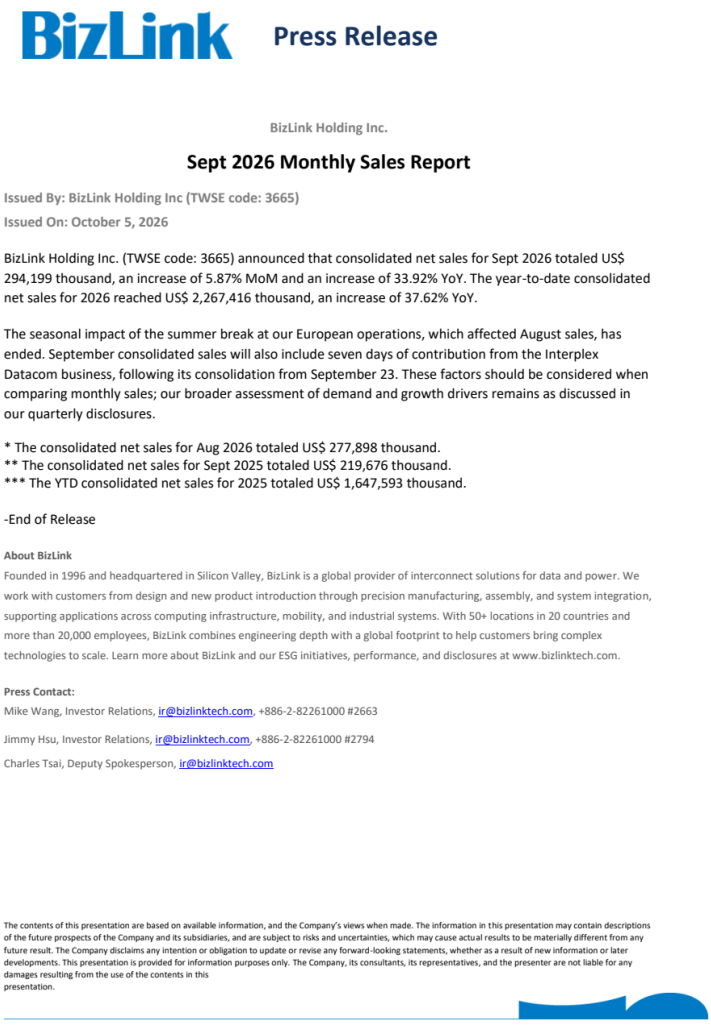

# II. Financial Highlights:
## Second Quarter 2026

### Broad-Based Growth & Disciplined Capital Allocation Drive Long-Term Value Creation

- **Broad-Based Growth — Q2 recovery extended across HPC, SPE and our broader portfolio, demonstrating the resilience of our multi-engine business model.**
- **Higher-Value Mix — HPC and SPE continue to increase their contribution as we expand into more complex, higher-value opportunities across the portfolio.**
- **Disciplined Capital Allocation — We invest selectively behind customer demand, strategic fit and expected returns, while maintaining the financial flexibility to pursue long-term opportunities.**

Original issuer exhibit | Q2 revenue mix was42% HPC, 14% SPE and 44% other. These are overlapping recategorizations of the ordinary business segments, not additional sales pools.

BizLink Press Release

BizLink Holding Inc.

**Sept 2026 Monthly Sales Report**

Issued By: BizLink Holding Inc (TWSE code: 3665)

Issued On: October 5, 2026

BizLink Holding Inc. (TWSE code: 3665) announced that consolidated net sales for Sept 2026 totaled US$ 294,199 thousand, an increase of 5.87% MoM and an increase of 33.92% YoY. The year-to-date consolidated net sales for 2026 reached US$ 2,267,416 thousand, an increase of 37.62% YoY.

The seasonal impact of the summer break at our European operations, which affected August sales, has ended. September consolidated sales will also include seven days of contribution from the Interplex Datacom business, following its consolidation from September 23. These factors should be considered when comparing monthly sales; our broader assessment of demand and growth drivers remains as discussed in our quarterly disclosures.

* The consolidated net sales for Aug 2026 totaled US$ 277,898 thousand.
** The consolidated net sales for Sept 2025 totaled US$ 219,676 thousand.
*** The YTD consolidated net sales for 2025 totaled US$ 1,647,593 thousand.

-End of Release

About BizLink

Founded in 1996 and headquartered in Silicon Valley, BizLink is a global provider of interconnect solutions for data and power. We work with customers from design and new product introduction through precision manufacturing, assembly, and system integration, supporting applications across computing infrastructure, mobility, and industrial systems. With 50+ locations in 20 countries and more than 20,000 employees, BizLink combines engineering depth with a global footprint to help customers bring complex technologies to scale. Learn more about BizLink and our ESG initiatives, performance, and disclosures at www.bizlinktech.com.

The information in this presentation may contain descriptions of the future prospects of the Company and its subsidiaries, and are subject to risks and uncertainties, which may cause actual results to be materially different from any future result. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information or later developments. This presentation is provided for information purposes only. The Company, its consultants, its representatives, and the presenter are not liable for any damages resulting from the use of the contents in this presentation.

Original issuer exhibit | September issuer monthly release is in USD thousands and includes only seven days of Interplex. Q3 profit was not yet released on the research date.

# Qualification, capacity and competition

The latest two complete prepared-remarks documents were read, dated May 12 and August 21. Management emphasized early engineering involvement, qualification across generations and work on next-generation programs. Equipment visibility extended into H2 2027, with some customer discussions beginning for 2028. Neither discussion supplied a consolidated numerical revenue forecast or guaranteed orders for every architecture. The published question prompts are not a transcript of live management answers; full live Q&A remains a source gap.

Useful capacity is trained people, qualified processes, functioning test and customer acceptance, not just floor area. The May discussion identifies scaling and staffing constraints in Penang and work across Batam, Tainan, Malaysia and Vietnam. The August discussion warns that mature programs can decline while new programs ramp. The model therefore funds capex and working capital and also applies a shared execution downside to the same HPC and equipment output pool.

Competition takes several forms: large diversified interconnect manufacturers, specialist cable and connector firms, optical assemblers, local lower-cost alternatives and customers integrating more assembly work

themselves. BizLink's advantage is its accumulated application knowledge, qualification history and ability to support programs across regions. Its own annual report warns that customized products can become standardized and face pricing pressure. This is a durable engineering advantage, not proof of an exclusive technology. The important evidence is a retained qualified socket or assembly scope, not a broad label such as AI supplier.

Original issuer exhibit | Management describes N+1/N+2 engineering involvement. This establishes product-development depth, not a guaranteed paid design win or monopoly.

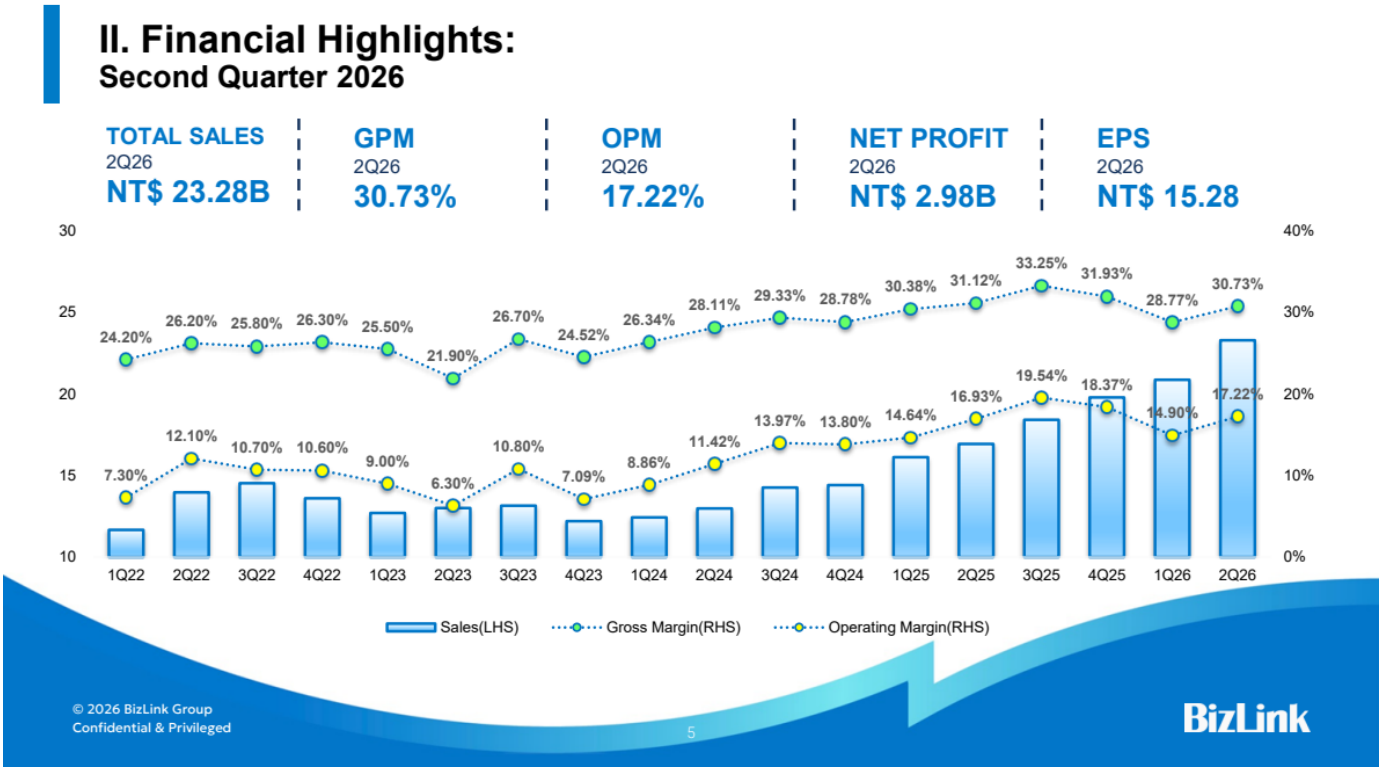

## Margins and operating-profit construction

The modeled reference gross margins are approximately 34.7-35% for established HPC, 31% for equipment, 26% for the broad remaining portfolio and 22% for acquired Interplex. These are allocation assumptions calibrated around the observed group result; the issuer does not disclose those segment margins. Legacy selling/support, administration and R&D together consume 12.25% of legacy revenue. Existing depreciation and share-based compensation remain expensed. The acquired business adds 7% revenue operating expense, TWD 200m quarterly purchase-accounting amortization and explicit transition expenses. That amortization reserve corresponds to roughly TWD 8bn of finite-life acquired intangibles over ten years; final allocation is unknown.

A TWD 2m quarterly reserve represents small outside ownership claims. Reported H1 noncontrolling net income was a loss of TWD 1.109m, immaterial beside parent net income of TWD 5,255.609m. No consolidated profit is attributed to a large outside owner. The reserve is deliberately visible and should be replaced if the acquisition or later filings reveal material minority earnings.

Four events generate 16 coherent outcomes. Deployment acceleration has a 55% probability, small retained repricing 45%, incremental microVCSEL packaging 25%, and execution disruption 25%. These are analyst probabilities. The deployment branch adds only to the already growing reference. Incremental gross profit is reduced by selling and engineering expense; a common execution event also cuts incremental deployment units. The pricing branch applies a 1.5% increase to only 40% of existing HPC revenue in 2027-28, with 80% of the invoice increase consumed by cost and support. It fades thereafter.

The optical branch assumes a gross conditional assembly wallet of TWD 100m in Q4 2027, TWD 700m in 2028, TWD 1.8bn in 2029 and TWD 3.0bn in 2030. Forty percent is removed for overlap with generic optical growth already included in HPC. The remaining wallet earns a 30% gross margin, pays 8% incremental operating expense and TWD 15m per quarter of development cost from 2027. The first commercial period can therefore make little money even when the event succeeds. No official award is required for a nonzero probability, but the available evidence does not support a large unconditional ramp.

Original issuer exhibit | Reported Q2 margin recovered from Q1. Mix, utilization and transition costs all matter; the model does not add the same recovery as a new pricing windfall.

## Acquisition, financing and ownership

Interplex closed on September 23 at US$850m enterprise value plus up to US$50m contingent consideration. The acquired operation brought precision mechanical products and manufacturing in several Asian countries. The model does not assume that its entire business is optical or high-margin AI. Standalone margin, acquired net debt, final equity cash payment and purchase-accounting allocation are not disclosed in the retrieved originals. Closing announcement.

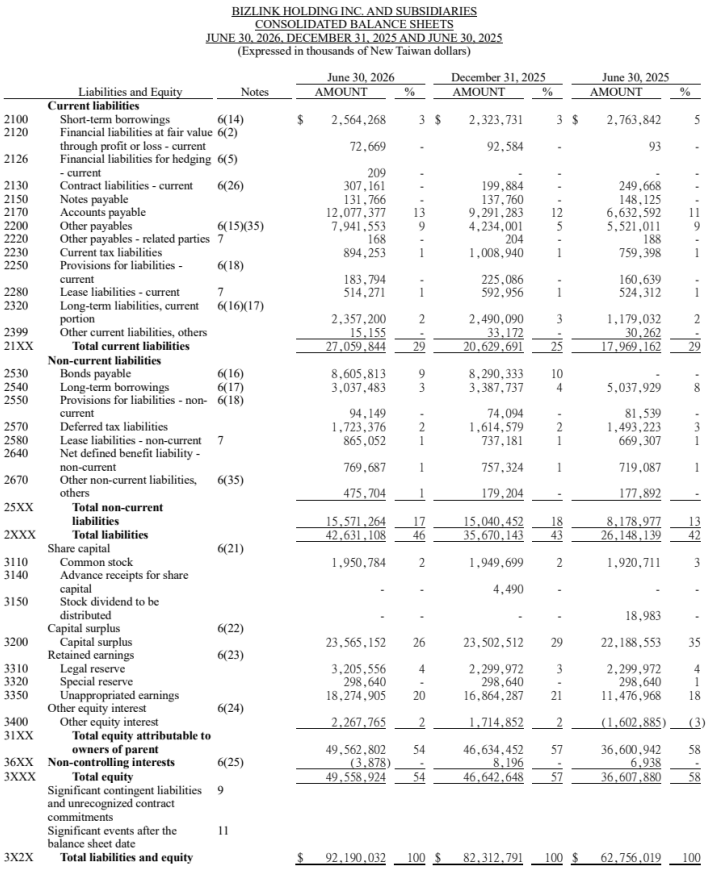

Funding begins with June unrestricted cash and time deposits of TWD 19,276.862m, excluding pledged deposits. August added US$315.135m from 4.5m new GDR-represented ordinary shares and US$500m from a new convertible. At the modeled TWD 32/USD planning rate, the bridge reserves TWD 27.2bn for the acquired enterprise, TWD 300m issuance fees, transaction costs through operating expense, the already declared TWD 2,925.051m dividend and an expected TWD 800m contingent payment. This is an enterprise-consistent funding reserve; it is not presented as the undisclosed final cash settlement. Target net debt is not deducted again on top of the enterprise purchase reserve.

Current issued ordinary shares are 199.578405m. The model reserves another 1.44m outstanding employee options without exercise-cash credit and a small future compensation-share allowance. It does not mistake authorized share capital for shares outstanding. The sixth convertible can create about 6.383m shares, while the seventh can create about 4.958m at their stated fixed exchange rates and conversion prices. A July

announcement proposing a lower sixth-bond strike was corrected on July 21: the TWD 1,423.50 strike remained in force because the adjustment did not meet the contractual threshold.

The sixth bond gives holders a September 2028 put at 106.15% of US$300m face value. The seventh has an August 2029 put at 100% of US$500m. Each outcome checks cash redemption as well as conversion. A bond is either a financial claim or additional shares; it is never both. Before the modeled put date, the evaluator chooses the holder-favorable debt/conversion alternative. At the put, the forecast settles the election and carries the resulting shares or cash use forward. This is a valuation convention based on modeled value, not a prediction of a particular trading-day conversion.

Gross financial claims are deducted from capitalized operating profit; surplus cash is not separately credited. This conservative convention avoids turning projected cash accumulation into another source of valuation expansion. Cash still funds the business and scheduled repayments. The bridge pays bank maturities, funds capex at 4.8% of sales through 2028, funds organic working capital and pays dividends. Even the stress that pays both convertible puts in cash remains above TWD 14.1bn cash in the modeled states, before unknown closing adjustments or trapped-cash constraints. That is a modeled feasibility result, not a current cash balance.

~8~

Original issuer exhibit | June 30 balance sheet in TWD thousands, before the August GDR/ECB and September acquisition. It is the opening funding snapshot, not a post-acquisition debt balance.

**THE OFFERING**

*The following is only a summary and a more complete description of the terms and conditions of the Bonds is set out in "Description of the Bonds." Capitalized terms used in this summary and not otherwise defined shall have the meanings given to them in "Description of the Bonds."*

| | |
|---|---|
| **Issuer** | BizLink Holding Inc. |
| **Bonds** | US$500,000,000 in aggregate principal amount of zero coupon convertible bonds due 2031. |
| **Conversion Shares** | Ordinary shares with a par value of NT$10.00 each in the capital stock of the Issuer. |
| **Issue Price** | 100% of the principal amount of the Bonds. |
| **Issue Date** | August 13, 2026 |
| **Initial Conversion Price** | NT$3,249.07 per Conversion Share with a fixed exchange rate applicable on conversion of Bonds of NT$32.219 = US$1.00. The price determining the number of Conversion Shares to be delivered upon conversion will be subject to adjustment in the manner provided in "*Description of the Bonds—Adjustments to the Conversion Price.*" |
| **Interest** | No interest shall be payable on the Bonds. |
| **The Offering** | The Bonds and the Conversion Shares are being offered by the Initial Purchasers outside the U.S. in accordance with Regulation S under the U.S. Securities Act. |
| **Status of the Bonds** | The Bonds constitute the direct, unsubordinated, unconditional and unsecured obligations of the Issuer, and shall at all-time rank *pari passu* and without any preference or priority among themselves. |
| **Use of Proceeds** | The Issuer plans to use the net proceeds of this Offering for the purposes of procurement of raw materials outside of Taiwan. See "*Use of Proceeds.*" |
| **Conversion Right** | The Conversion Right attaching to any Bonds (in denominations of US$200,000 and integral multiples thereof) may be exercised, at the option of the holder thereof, at any time on or after November 14, 2026 up to the close of business (at the place where such Certificate evidencing the Bond is deposited for conversion) on August 3, 2031, or if such Bond shall have been called for redemption then up to the close of business (at the place aforesaid) on a date no later than five Business Days (at the place aforesaid) prior to the date fixed for redemption thereof.<br><br>Subject to the Indenture, the Issuer will pay cash amounts relating to any fractional entitlements at the same time as the Conversion Shares are delivered. |
| **Final Redemption** | Unless previously redeemed, converted, or repurchased and cancelled in the circumstances referred to in "*Description of the Bonds*," the Bonds will be redeemed at 100.00% of the principal amount, in U.S. dollars on August 13, 2031 (the "Maturity Date"). |

5

Original issuer exhibit | Original seventh ECB summary: US$500m, TWD 3,249.07 initial strike, fixed conversion FX 32.219 and August 2031 maturity. Separate put terms on the next page bring potential cash repayment forward to August 2029.

# Valuation, falsification and next evidence

The active 2027 model produces approximately TWD 140.35bn revenue and TWD 24.71bn owner operating profit. In 2028 it produces TWD 163.61bn and TWD 29.96bn respectively. These are independent forecasts. Long-range growth slows as supplier capacity responds and ordinary interconnect competition returns. The Q4 2027 ceiling uses that quarter through Q3 2028, not the next calendar year or an annualized single quarter.

The analytical Base of 77 is built from Core 17/20, Cycle 8/10, TAM 8/10, Catalysts 4/5, Macro 8/10, Alpha 4/5 and Risk -3. The company earns credit for established customers, qualification knowledge, operating profitability and broad participation in power and data connections. It loses points for diversification away from the strongest AI demand, acquisition disclosure gaps, customer timing and execution, and the absence of a demonstrated exclusive optical position. A higher score would require more evidence of durable profit capture, not simply higher market growth.

The thesis would weaken if HPC sales grow mainly through low-margin pass-through, Interplex's acquired margin is much lower than assumed, inventories expand faster than accepted output, or skilled labor and qualification delay the forecast. The optical option weakens if the architecture cannot meet system reach and reliability

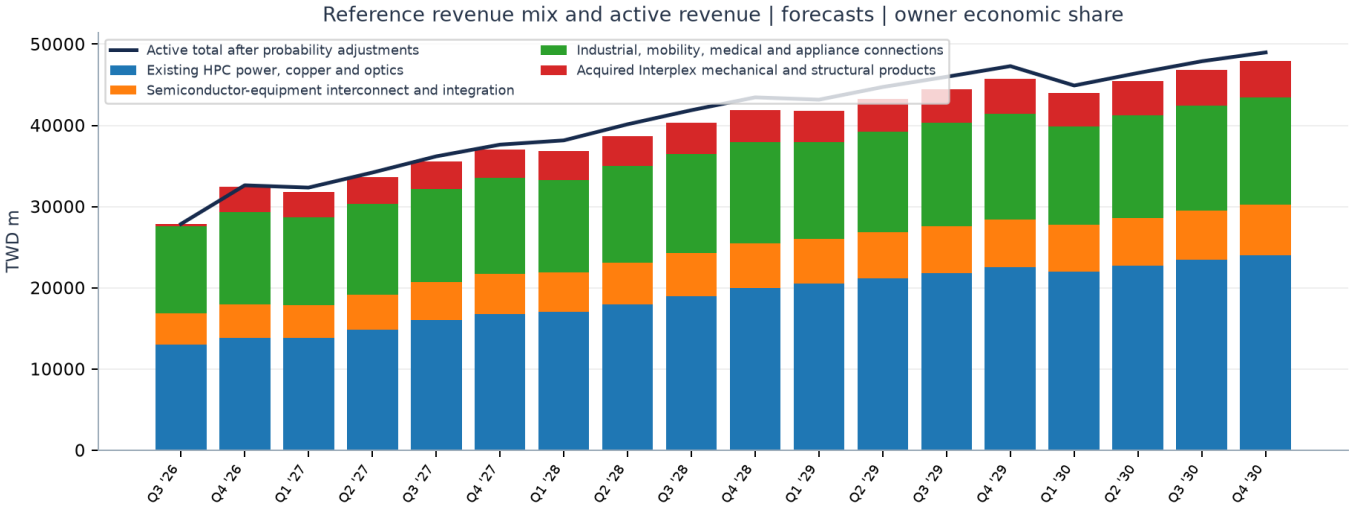

requirements at an attractive assembled cost, or if qualification moves beyond the modeled ramp. Stronger evidence would be paid optical programs, repeatable assembly yields, disclosed capacity accepted by customers and demonstrated profit through a platform change.

The next essential check is the Q3 financial release: revenue reconciliation, actual post-acquisition cash and debt, the first purchase-price allocation, and any bond conversions. The next two quarters should also test whether the equipment visibility and HPC content increase turn into recognized sales at the modeled margin. Announced partnerships, demonstrations and engineering engagement remain valuable forward evidence, but they must keep passing those commercial tests.

## Score arithmetic

| Category | Points | Evidence / treatment |
|---|---|---|
| Core thesis | 17 | See the scoring evidence and distinct risk classes in the analysis. |
| Cycle | 8 | See the scoring evidence and distinct risk classes in the analysis. |
| TAM | 8 | See the scoring evidence and distinct risk classes in the analysis. |
| Catalysts | 4 | See the scoring evidence and distinct risk classes in the analysis. |
| Macro | 8 | See the scoring evidence and distinct risk classes in the analysis. |
| Alpha | 4 | See the scoring evidence and distinct risk classes in the analysis. |
| Risk classes | -3 | See the scoring evidence and distinct risk classes in the analysis. |
| Total | 46/60 | Rounded Base 77. Both artifact and new workbook row use this score; this is not a manual override. |

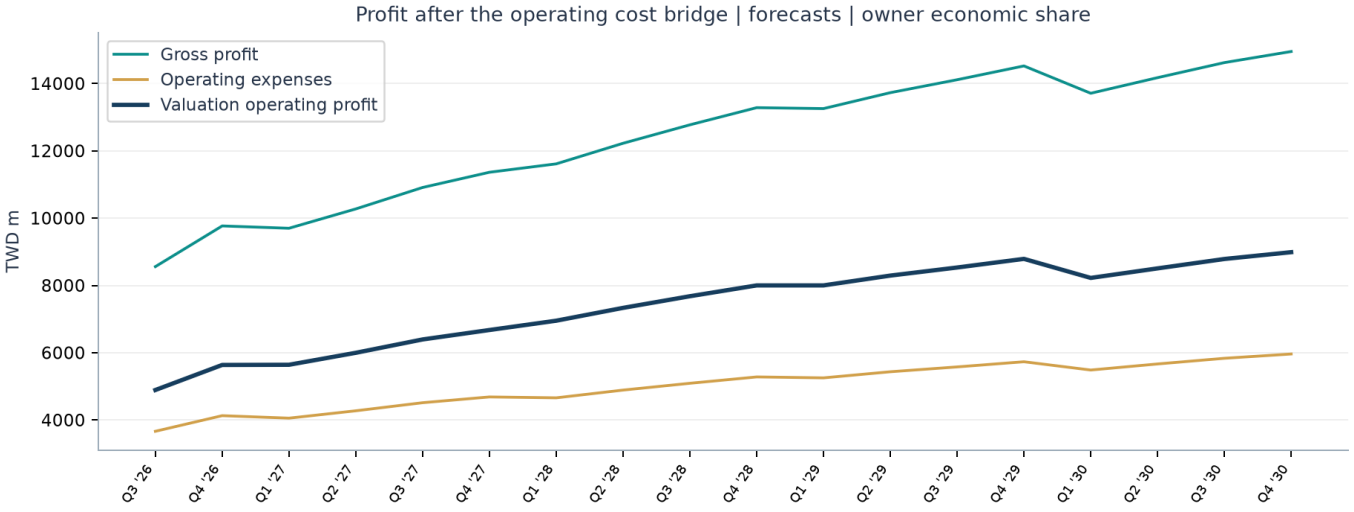

# Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

| Quarter | Reference revenue | Weighted net change | Active revenue |
|---|---|---|---|
| Q3 2026 | 27,854.4 | 0.0 | 27,854.4 |
| Q4 2026 | 32,486.0 | 136.7 | 32,622.7 |
| Q1 2027 | 31,836.0 | 505.7 | 32,341.7 |

# The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

| Quarter | Equivalent qualified HPC invoice programs; modeled, not reported units | Status |
|---|---|---|
| Q3 2026 | 52,000.000 | Reported monthly sales; margins and product allocation modeled |
| Q4 2026 | 55,200.000 | Model assumption, not issuer guidance |
| Q1 2027 | 55,200.000 | Model assumption, not issuer guidance |
| Q2 2027 | 59,200.000 | Model assumption, not issuer guidance |
| Q3 2027 | 64,000.000 | Model assumption, not issuer guidance |
| Q4 2027 | 67,200.000 | Model assumption, not issuer guidance |
| Q1 2028 | 68,000.000 | Model assumption, not issuer guidance |
| Q2 2028 | 72,000.000 | Model assumption, not issuer guidance |
| Q3 2028 | 76,000.000 | Model assumption, not issuer guidance |
| Q4 2028 | 80,000.000 | Model assumption, not issuer guidance |
| Q1 2029 | 82,000.000 | Model assumption, not issuer guidance |
| Q2 2029 | 84,800.000 | Model assumption, not issuer guidance |
| Q3 2029 | 87,200.000 | Model assumption, not issuer guidance |
| Q4 2029 | 90,000.000 | Model assumption, not issuer guidance |
| Q1 2030 | 88,000.000 | Model assumption, not issuer guidance |
| Q2 2030 | 90,800.000 | Model assumption, not issuer guidance |
| Q3 2030 | 94,000.000 | Model assumption, not issuer guidance |
| Q4 2030 | 96,000.000 | Model assumption, not issuer guidance |

# Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

| Quarter | Revenue vector | Revenue | Gross margin | Gross profit |
|---|---|---|---|---|
| Q3 2026 | Existing HPC power, copper and optics | 13,000.0 | 34.7% | 4,511.0 |
| Q3 2026 | Semiconductor-equipment interconnect and integration | 3,900.0 | 31.0% | 1,209.0 |
| Q3 2026 | Industrial, mobility, medical and appliance connections | 10,713.8 | 26.0% | 2,785.6 |
| Q3 2026 | Acquired Interplex mechanical and structural products | 240.6 | 22.0% | 52.9 |
| Q4 2026 | Existing HPC power, copper and optics | 13,800.0 | 34.7% | 4,788.6 |
| Q4 2026 | Semiconductor-equipment interconnect and integration | 4,150.0 | 31.0% | 1,286.5 |
| Q4 2026 | Industrial, mobility, medical and appliance connections | 11,400.0 | 26.0% | 2,964.0 |
| Q4 2026 | Acquired Interplex mechanical and structural products | 3,136.0 | 22.0% | 689.9 |
| Q1 2027 | Existing HPC power, copper and optics | 13,800.0 | 34.7% | 4,788.6 |
| Q1 2027 | Semiconductor-equipment interconnect and integration | 4,100.0 | 31.0% | 1,271.0 |
| Q1 2027 | Industrial, mobility, medical and appliance connections | 10,800.0 | 26.0% | 2,808.0 |
| Q1 2027 | Acquired Interplex mechanical and structural products | 3,136.0 | 22.0% | 689.9 |
| Q2 2027 | Existing HPC power, copper and optics | 14,800.0 | 34.7% | 5,135.6 |
| Q2 2027 | Semiconductor-equipment interconnect and integration | 4,350.0 | 31.0% | 1,348.5 |
| Q2 2027 | Industrial, mobility, medical and appliance connections | 11,200.0 | 26.0% | 2,912.0 |
| Q2 2027 | Acquired Interplex mechanical and structural products | 3,300.0 | 22.0% | 726.0 |
| Q3 2027 | Existing HPC power, copper and optics | 16,000.0 | 34.7% | 5,552.0 |
| Q3 2027 | Semiconductor-equipment interconnect and integration | 4,700.0 | 31.0% | 1,457.0 |
| Q3 2027 | Industrial, mobility, medical and appliance connections | 11,500.0 | 26.0% | 2,990.0 |
| Q3 2027 | Acquired Interplex mechanical and structural products | 3,400.0 | 22.0% | 748.0 |

| Quarter | Revenue vector | Revenue | Gross margin | Gross profit |
|---|---|---|---|---|
| Q4 2027 | Existing HPC power, copper and optics | 16,800.0 | 34.7% | 5,829.6 |
| Q4 2027 | Semiconductor-equipment interconnect and integration | 4,900.0 | 31.0% | 1,519.0 |

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

# Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

# Matched operating outcomes, financial claims and conversion

Four events generate sixteen persistent combinations. Each put follows its holder-value-consistent cash or conversion path. Before settlement, convertible cash claims and contractual shares are alternatives. The table values common equity in each outcome before weighting. Expected shares do not reproduce the weighted ceiling by a simple division.

Bit order: deployment, price, microVCSEL packaging, execution risk. The last bit is an adverse event.

| Q4 2027 bits | Probability | F4Q OP | Matched claims | Matched shares | Ceiling |
|---|---|---|---|---|---|
| 0000 | 13.92% | 27,682.3 | 17,379.3 | 207.664 | 2,582.38 |
| 0001 | 4.64% | 24,618.4 | 17,379.3 | 207.664 | 2,287.30 |

# Claim decisions, overlap and triggers

## DEPLOY

p: 0.55

source: Q2 prepared remarks Aug21 and deck pp3-4; MGX June4

signal: Qualified power/copper and integrated-equipment content grows faster than the already growing reference.

Conditional: Additional HPC revenue 3% in Q4 2026, 10% in 2027, 16% in 2028, 14% in 2029 and 10% in 2030; SPE +2%, +8%, +10%, +6%, +3% respectively.

overlap: Existing HPC and SPE growth, XFS acquisition, current platform demand and reported Q3 sales are fully in reference. One combined deployment event prevents adding rack power and copper transitions as independent volume shocks.

cost bridge: 32% incremental HPC GP and 30% SPE GP, less 6% incremental operating expense; common execution state clips these same units. 4.8% revenue capex and 28% incremental organic working capital also funded.

bounded rationale: 55% reflects observed installed business and management visibility into H2 2027, reduced by undisclosed program awards, throughput and customer timing.

## PRICE

p: 0.45

source: May12 prepared remarks: selective copper/PVC price adjustments

signal: Qualified new terms retain a small portion of scarce integration value after material inflation.

Conditional: 1.5% price increment on only 40% of existing HPC revenue in 2027-28, halved in 2029, zero by 2030.

overlap: 2026 adjustments and higher Q2 gross margin already in reference; zero new 2026 increment. This affects reference units only, not deployment branch units.

cost bridge: 75% of incremental invoiced revenue consumed by input/manufacturing cost, 5% selling/support, 20% OP capture. Fixed or legacy terms outside the 40% pool unchanged.

bounded rationale: 45% because management confirms repricing mechanics but no quantified customer premium or open contract pool.

## MICROVCSEL

p: 0.25

source: September21 ams OSRAM partnership and ECOC demonstrator

signal: Wide-and-slow optical packaging produces paid assembly invoices after qualification.

Conditional: Gross conditional wallet TWD 100m in Q4 2027, TWD 700m in 2028, TWD 1,800m in 2029 and TWD 3,000m in 2030; subtract 40% overlap. Equivalent TWD 3,000 assembly invoice proxy, not a disclosed ASP.

overlap: 40% removed for generic optics/XFS content already included in HPC. BizLink gets only assembly/fiber-connector content; OSRAM laser dies and complete optical modules are excluded.

cost bridge: 30% GP on remaining revenue, 8% selling/support plus TWD 15m per quarter incremental development from 2027. No separate photonics TAM multiplier.

bounded rationale: 25% for a demonstrated architecture with an identified technology partner but no disclosed paid program, qualification deadline, yield, target reach or unit economics.

## EXECUTION

p: 0.25

source: May12 platform-transition and Penang scaling discussion; Aug21 variable deployment timing

signal: Qualification, staffing, yield or customer deployment restrict saleable output.

Conditional: HPC/SPE output down3% in Q4 2026, 10% in 2027, 8% in 2028, and 6% in 2029-30 from the same state-specific qualified output pool.

overlap: One shared risk applies to reference and incremental deployment units; not multiplied again as an unrelated demand or utilization penalty.

cost bridge: 35% lost contribution on deferred output plus 0.4% of reference HPC/SPE sales in expediting and requalification expense.

bounded rationale: 25% recognizes actual Q1 margin variability and scarce ramp skills without assuming all market demand vanishes.

## Remaining bounded uncertainties

- Q3 is a monthly sales aggregate, not reported quarterly earnings. The TWD monthly H1 aggregate differs from reviewed H1 by TWD 34.284m; monthly Q3 is TWD 27,854.372m.

- Interplex standalone margin, purchase-price allocation, exact equity cash consideration/net-debt adjustment and final transaction costs are not disclosed in retrieved originals. Model uses enterprise-consistent cash reserve and explicit PPA amortization; no acquired earnings without funding.

- No microVCSEL customer award, accepted units, channel count, reach, BER, reliability yield, assembly ASP or production schedule is public in the partnership release.

- HPC/SPE invoice-equivalent units and margins are calibrated assumptions, not issuer segment earnings or shipment guidance. Qualified site capacity and labor throughput are not quantified.

- Full live Q&A audio was not transcribed; the latest two issuer prepared remarks and decks were read completely. Their question prompts do not substitute for management answers.

- Post-June ECB conversions/options could change exact live shares. Current TWSE capital verifies199.578405m issued shares; 1.44m options are reserved without exercise-cash credit. Future anti-dilution adjustments are not forecast because record-date inputs are unknown.

- Contingent acquisition consideration has an expected TWD 800m reserve (50% of the US$50m cap); exact earnout criteria/timing unknown. Full-cap sensitivity is separately required.

- Cash outside Taiwan may face remittance or covenant restrictions. The model excludes pledged deposits; unrestricted time deposits are treated as available on maturity.

- Independent outcome probabilities are analytical assumptions. Shared execution haircuts explicitly reduce deployment upside; they are not unrelated new demand shocks.

## Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
