Q4 2027 model ceiling: JPY 7,462.27

Analytical Base 40/60 = 67 | Watchlist / qualified bottleneck within diversified manufacturer

20x rolling forward-four-quarter Japanese-GAAP operating profit attributable to common equity using a3% minority-OP reserve on reference and increments, divided by window-end modeled shares. No net-debt claim or excess-cash credit.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in JPY m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	75,846.4	20x	203.280	7,462.27

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Thesis

Research date: October 7, 2026. Framework v 8.0. TSE Prime 5991, JPY. NOT HELD: no ownership established. Classification: qualified bottleneck inside a diversified manufacturer. Analytical Base 40/60, **67%**, Watchlist. New-company valuation basis: 20x forward-four-quarter Japanese-GAAP operating profit, with the specific common-equity claims convention below. Draft submitted to the parent for adoption; no portfolio writes have occurred.

Thesis and position in the cycle

NHK supplies the small spring assemblies that position HDD read/write heads. Recording more tracks in a fixed area demands tighter mechanical positioning, while adding disks increases the number of heads and suspensions. Its existing CLA/TSA designs already support 10-11-disk, 26-28TB conventional drives and TSA suspensions for heat-assisted recording. This makes the company an engineering beneficiary of both more nearline drives and more demanding content per drive. It is not an HDD manufacturer and does not receive the finished drive's selling price.

The opportunity sits in the storage portion of DB6 and the qualified semiconductor-component portion of DB12. The DDS business is in a demand and capacity ramp; the automotive businesses are mature and competitive. This distinction matters: automotive suspension springs and seating account for more than half of guided sales. The highly profitable storage component business is diluted by the remainder of the company under Rule 10. A strong component does not make every division a chokepoint.

Latest actuals and guidance

The newest reported period is April-June 2026, fiscal Q1 of the year ending March 2027. Revenue was JPY216,159m and operating profit JPY14,356m. Gross profit was 32,175m and SG&A17,818m; the one-million difference when subtracting published rounded figures is a filing-rounding issue. Ordinary profit 20,644m contains non-operating items and is not the valuation numerator.

DDS revenue 37,637m and OP9,057m explain much of the improvement. Springs posted a 510m operating loss; seating earned 1,793m, precision components 1,304m and industrial/other 2,711m. The August release retained FY3/27 revenue 860,000m and OP59,000m. It raised DDS OP guidance to 31,000m and reduced springs to 3,000m, leaving consolidated guidance unchanged. The operating model allocates the remaining fiscal-year sales and OP after the reported June quarter exactly to that guidance; it does not turn an old estimate into an actual.

Calendar Q3 2026 is still labeled Model because no September-quarter financial result has been retrieved. November 12,2026 is the next indicated earnings date. The 2027 calendar-year forecast includes the final quarter of FY3/27 and three quarters of the new growth path; consequently it is not identical to a simple annualized 2027 input.

https://ssl4.eir-parts.net/doc/5991/tdnet/2864768/00.pdf | June 2026 quarter and unchanged FY3/27 consolidated guidance; JPY million.

[Industrial Machinery and Equipment, and Other Operations Business]

In the industrial machinery and equipment, and other operations business, due to an increase in production volumes of semiconductor process components and metal substrates, net sales increased by 16.2% year-on-year to 32,962 million yen, and operating profit increased by 66.7% year-on-year to 2,711 million yen.

(2) Explanation of Consolidated Financial Position

Total assets increased by 16,832 million yen from the end of the previous consolidated fiscal year to 755,282 million yen, mainly due to an increase in cash and deposits, as well as an increase in investment securities due to the market valuation of listed shares held.

Liabilities increased by 1,400 million yen from the end of the previous consolidated fiscal year to 286,815 million yen, mainly due to increases in the provision for bonuses and electronically recorded obligations - facilities, despite decreases in long-term borrowings and income taxes payable.

Net assets increased by 15,431 million yen from the end of the previous consolidated fiscal year to 468,466 million yen, mainly due to an increase in retained earnings resulting from profit attributable to owners of parent and an increase in valuation difference on available-for-sale securities.

(3) Explanation Regarding Future Projection Including Consolidated Financial Forecasts

The consolidated earnings forecasts for the full year ending March 31, 2027 remain unchanged from those announced on May 11, 2026. However, the earnings forecasts for each business segment have been revised as follows.

Business Segment	Net Sales			Operating Profit		
	Previous Forecast (May 11,2026) (A)	Latest Forecast (B)	Variance (B-A)	Previous Forecast (May 11,2026) (C)	Latest Forecast (D)	Variance (D-C)
	Million yen	Million yen	Million yen	Million yen	Million yen	Million yen
Automotive Suspension Springs	164,000	164,000	0	4,000	3,000	(1,000)
Automotive Seating	311,000	311,000	0	9,000	9,000	0
Precision Springs & Components	108,000	108,000	0	5,000	5,000	0
DDS	144,000	144,000	0	30,000	31,000	1,000
Industrial Machinery & Others	133,000	133,000	0	11,000	11,000	0
Consolidated Total	860,000	860,000	0	59,000	59,000	0

https://ssl4.eir-parts.net/doc/5991/tdnet/2864768/00.pdf | August segment revision: DDS OP rises to JPY31bn, offset by springs; total guidance unchanged.

What the two management discussions actually establish

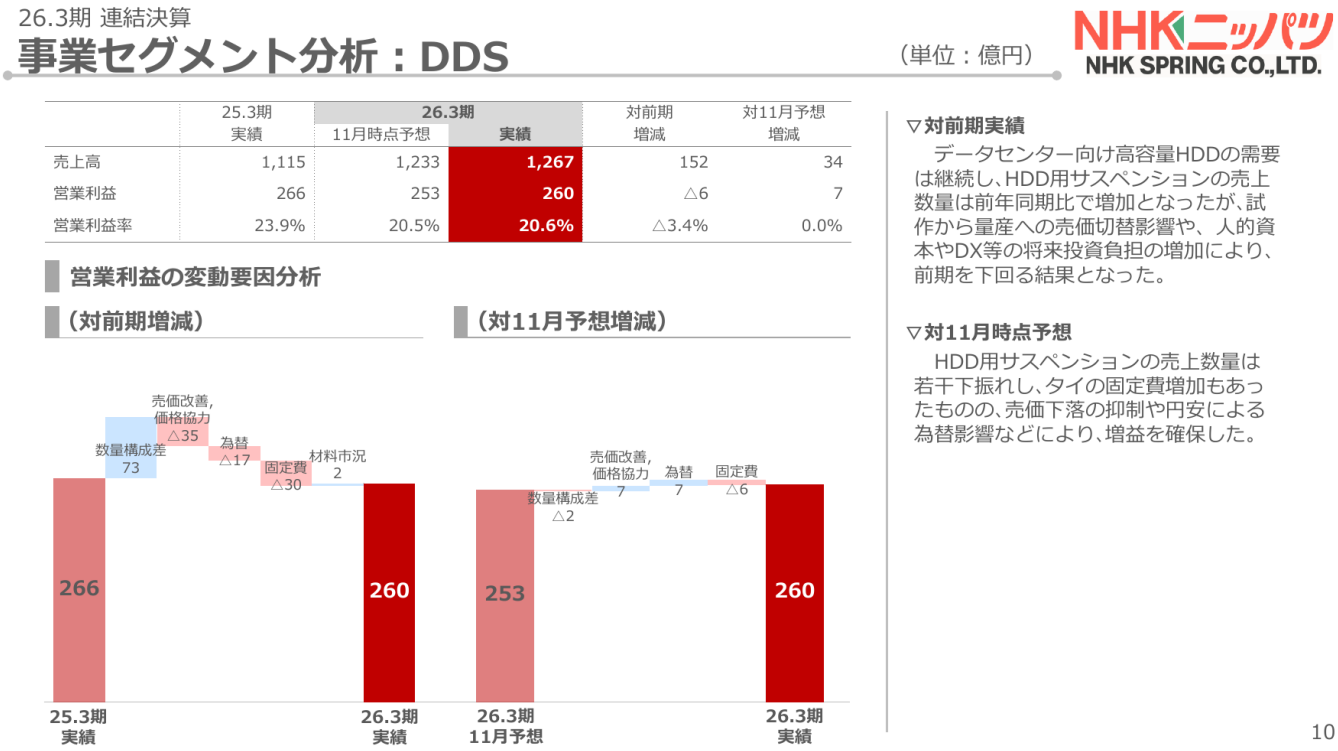

The latest available results call/Q&A is May 11,2026; the August financial release explicitly says there was no earnings briefing. In May, management described nearly fixed 2027 purchasing plans communicated from cloud operators to HDD manufacturers, strong demand beyond 2027, and suspension unit growth of 10-15% that it expected to persist for two to three years. It was adding and converting lines and said it would pursue selling-price improvements while discussing incurred costs with customers. This is evidence for demand and price opportunity, not an announced 3% price increase.

The preceding November 28,2025 Q&A supplies counter-evidence. Management then said it had little spare capacity but was satisfying customers, and did not consider suspensions the bottleneck. It distinguished prototype pricing from lower mass-production pricing and said HDD-maker price increases did not establish a corresponding suspension price rise. Both discussions are preserved as original Japanese files with translated findings in evidence.json. Analyst questions are context; the model rests on management answers.

Why unit growth does not equal margin growth

The DDS operating margin fell from 23.9% to 20.6% in FY3/26 even as sales increased. The issuer's profit bridge identifies higher volume/mix offset by prototype-to-volume price transitions, currency and fixed costs. The forward model therefore keeps product margin assumptions explicit. Reference DDS gross margin starts at 30% in the guidance allocation and moves only gradually toward 31%; this is a calibrated analytical gross-margin proxy, not a disclosed segment GM. Reported segment operating margin is the external cross-check.

Six revenue vectors separate automotive springs, seating, precision components, DDS, semiconductor process parts and other industrial products. Product gross margins are individually modeled; consolidated SG&A is calibrated to the current operating-profit guidance and later declines modestly as a share of sales. It includes expensed R&D, share compensation and administrative depreciation. Manufacturing R&D, depreciation and labor already included in product costs are not deducted a second time. The group reported JPY24,676m R&D in FY3/26, but that total must not simply be subtracted again from reported GP.

https://www.nhkspg.co.jp/hubfs/nhkspg.co.jp/pdf/ir/library/meeting/2026/2026_03.pdf | Issuer DDS profit bridge shows prototype-to-volume pricing, fixed costs and foreign exchange offsetting unit growth.

Capacity and recognition timing

There are two distinct DDS announcements. The July 16 plan contains approximately JPY15bn for a new Thailand building within approximately JPY35bn of phased investment. Moving and streamlining visual inspection can free space in the existing building. The **up-to 1.6x capacity increase applies to the Wellgrow site**, not NHK globally, and building completion is December 2027. Customer-qualified good units require equipment, trained production, stable yield and accepted specifications after that date.

September 17 adds approximately JPY5bn of manufacturing lines at several sites, with operation beginning sequentially in 2027. The release explicitly says this is outside July's 35bn plan. It can address nearer-term demand without waiting for the new building. Neither release publishes units per month or all-in unit economics. The model uses an equivalent JPY130 suspension ASP solely as a bridge, with JPY100-160 sensitivity, and a

40% Thailand share of reference output as a bounded site proxy. A60% expansion of that assumed site would create a 34,560m revenue-equivalent capacity ceiling at FY3/27 sales; the conditional above-reference 2028 sales increment is only 9,000m. Most capacity supports the reference rather than another independent TAM pool.

The Toshiba capacity headline is relevant demand context but does not prove a new NHK award. The same drive additions already support the HDD demand/reference and good-output branch; there is no separate Toshiba revenue addition. Conversely, greater suspension output can help competing HDD manufacturers deliver drives and may reduce the downstream scarcity benefit for STX/WDC.

NHK SPRING CO.,LTD.
July 16, 2026
Company Name: NHK SPRING CO., LTD.
Securities Code: 5991 (TSE Prime Market)

NHK SPRING to Construct New Production Building for HDD Suspensions at Thailand Base
– Strengthening Production Capacity in Anticipation of Future Demand Growth –

NHK SPRING CO., LTD. (Head office: Yokohama, Japan; President and COO: Kazuhisa Uemura; the "Company") has decided to construct a new production building at the Wellgrow Plant of NHK SPRING (THAILAND) CO., LTD., its production base in Thailand, in anticipation of future demand growth for HDD(Hard Disk Drive) suspensions.

1. Background of the Investment
In recent years, the high-capacity HDD market is expected to see expanding demand, driven by AI-related applications and growing data center needs. In light of these market trends and in preparation for future demand, the Company has decided to construct a new production building.
The new building is intended to consolidate and streamline the visual inspection processes, which will enable the effective use of space in the existing production building. As a result, HDD suspension production capacity at this site can be expanded up to 1.6 times.

2. Details of the Investment
Approximately 15 billion yen will be invested in the new production building at the Wellgrow Plant. Going forward, including this investment, the Company plans to make phased capital investments totaling approximately 35 billion yen for manufacturing equipment to strengthen production capacity in preparation for future demand growth.

3. Overview

(1)	Target Site:	NHK SPRING (THAILAND) CO., LTD., Wellgrow Plant
(2)	Location:	Bangpakong District, Chachoengsao Province, Kingdom of Thailand
(3)	Investment Amount:	Approximately 15 billion yen (phased investment of approximately 35 billion yen in total planned.)
(4)	Site Area:	Approximately 6,000 square meters
(5)	Products:	HDD Suspensions
(6)	Scheduled Completion:	December 2027

Rendering of the new production building

NHK SPRING to Expand Production Capacity for HDD Suspensions in Response to Growing Demand

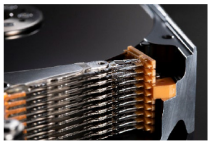

NHK SPRING CO., LTD. (Head Office: Yokohama, Japan; President & COO: Kazuhisa Uemura) has decided to expand its production capacity to meet growing demand for HDD suspensions, driven primarily by AI applications and data centers.

1. Background of the Investment
Demand for data storage is growing rapidly with the expansion of AI applications and data centers. Meanwhile, the increasing storage capacity of HDDs requires more suspensions per drive.
Against this backdrop, demand for HDD suspensions is growing, particularly for high-capacity HDDs.
To respond promptly to the growing demand, the Company will add manufacturing lines at multiple DDS Business production sites in Japan and overseas.

2. Details of the Investment
The Company will make an additional investment of approximately 5 billion yen in its DDS Business to add HDD suspension manufacturing lines at multiple production sites in Japan and overseas.
This investment is intended to address the recent increase in demand and is not included in the approximately 35 billion yen investment plan announced on July 16, 2026, in the news release titled "NHK SPRING to Construct New Production Building for HDD Suspensions at Thailand Base."

3. Overview

(1)	Business Segment	DDS (Disk Drive Suspension) Business
(2)	Purpose of Investment	Expansion of production capacity to meet the recent increase in demand
(3)	Investment Amount	Approximately 5 billion yen*
		*The above investment amount is not included in the approximately 35 billion yen investment plan announced on July 16, 2026, in the release titled "NHK SPRING to Construct New Production Building for HDD Suspensions at Thailand Base."
(4)	Investment Details	Addition of HDD suspension manufacturing lines
(5)	Products	HDD suspensions
(6)	Start of Operations	Operations are scheduled to begin sequentially from 2027

Installation Inside the HDD

HDD Suspension

[Inquiries regarding this announcement]
NHK SPRING CO., LTD. Corporate Communications Dept, Corporate Planning & Control Division
Tel: (+81) 45-786-7513

https://www.nhkspg.co.jp/hubfs/nhkspg.co.jp/en/pdf/news/management_business/2026/20260917_en.pdf | September JPY5bn lines are explicitly separate from July plan and begin operation sequentially in2027.

Process components and the TAM expansion lens

NHK also makes stage heaters, cooling plates and showerheads for deposition and etching equipment. Complex internal cooling channels, diffusion bonding, coating purity and thermal uniformity affect wafer processing and contamination. Customer qualification and integrated machining/joining create switching costs. This is the component wallet inside a process chamber, not the complete equipment system or customer capex dollar.

The May issuer table gives process-component sales of JPY25.4bn in FY3/26,38.2bn guidance for FY3/27 and 64.3bn ambition for FY3/31. August's initial 6bn investment installs equipment from FY2027; an eventual doubling includes additional land/building phases still under consideration. The model's reference CY2030 process revenue is 60bn. A55% weighted 4.3bn conditional increment places the active outcome between that reference and the order of magnitude of management's ambition. It does not double 64.3bn again.

The first TAM phase is established HDD and semiconductor manufacturing demand. The second phase is motor cores, thermal substrates and qualified electrification parts; the model admits only a 30% probability on a modest extra commercial path because management cited delays and no confirmed Indian customer program. These opportunities share engineering capabilities but are not limitless new markets. A third-phase robotics/space option

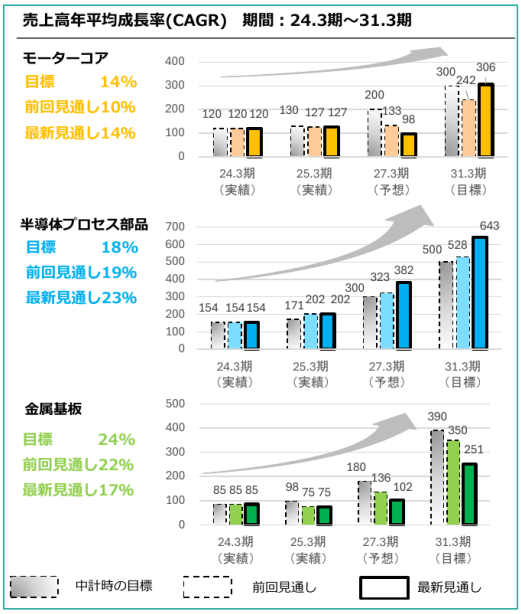

lacks a specific qualified company wallet; no extra revenue is layered on the already broad precision/industrial growth. This zero is an overlap and unsupported-capture disposition, not zero probability that the markets develop.

補足資料

製品紹介：半導体プロセス部品（産業機器ほかセグメント）

NHKニッパツ NHK SPRING CO.,LTD.

■成膜装置用マルチゾーン制御ステージヒータ

■エッチング装置用溶射付冷却板

半導体はシリコンの基板上に導線および絶縁物が微細かつ複雑なパターンで描かれ、回路が形成されています。ニッパツの半導体プロセス部品は半導体製造の主要工程である“成膜”および“エッチング”の工程で用いられています。

ニッパツのステージヒータはCVD、ALD*などの成膜工程で広く採用されています。主にアルミ合金、ステンレスなどの金属製で、長年培ってきた高度な接合技術により、複雑な内部構造の実現が可能です。

*CVD；Chemical Vapor Deposition（化学気相成長）の略
*ALD；Atomic Layer Deposition（原子層堆積）の略

ヒータエレメントの設計技術、シミュレーションのための解析技術を駆使し、複数のヒータエレメントや冷媒用チャンネル、断熱空間を配置し、均一な温度分布のみならず、部分的に数十度の範囲で差を生み出す、積極的な温度分布制御を可能にしています。

一方エッチング装置向けにおいては、冷却板と呼ばれる、プロセス中のシリコンウエハが載荷される、重要なステージ部品を製造しています。多くはアルミ合金で造られており、ヒータ同様高度接合技術を核に、材料調達から精密加工、セラミクス溶射施工までの一貫生産を強みとしています。

近年では、チャンバ下部でウエハを支持するヒータ、冷却板に加え、チャンバ上部に設置され、プロセスに必要なガスを供給するための部品であるシャワーヘッドの開発にも注力しており、売上を伸ばしております。

NHK SPRING CO.,LTD.

August 6, 2026
Company Name: NHK SPRING CO., LTD.
Securities Code: 5991 (TSE Prime Market)

NHK SPRING to Expand Production Capacity for Semiconductor Process Components in Response to Growing Demand

NHK SPRING CO., LTD. (Head Office: Yokohama, Japan; President & COO: Kazuhisa Uemura) has decided to make additional capital investments at its Isehara Plant and Miyada Plant to expand production capacity for semiconductor process components for semiconductor manufacturing equipment, in anticipation of medium- to long-term demand growth.

1. Background of the Investment
Since establishing the Miyada Plant in April 2019, the Company has progressively expanded production capacity in response to growing demand. In 2024, the Company further expanded the Miyada Plant to strengthen its supply capabilities.

The semiconductor market has continued to grow in recent years, supported by the widespread adoption of generative AI and increased investment in data centers. Demand for semiconductor process components has also been expanding as a result.

In light of these market conditions, the Company has decided to make the additional investments described below to further strengthen its production capacity.

2. Details of the Investment
The Company will increase production capacity at both the Isehara Plant and the Miyada Plant by expanding manufacturing equipment. The total investment amount is expected to be approximately 6 billion yen, and equipment installation will be carried out sequentially beginning in fiscal year 2027.

In addition, the Company is also considering phased investments to expand capacity, including land acquisition and the construction of new production facilities, to accommodate further growth in future demand. Including such future investments, the Company aims to double its overall production capacity for semiconductor process components from the current level.

3. Overview

(1)	Target Sites	Isehara Plant and Miyada Plant
(2)	Locations	Isehara City, Kanagawa Prefecture, Japan Miyada Village, Nagano Prefecture, Japan
(3)	Investment Amount	Approximately 6 billion yen
(4)	Equipment Installation	Sequential implementation beginning in fiscal year 2027
(5)	Products	Semiconductor process components (Cooling Plates, Shower Heads, and Stage Heaters)

(Cooling Plate) (Shower Head) (Stage Heater)

[Inquiries regarding this announcement]
NHK SPRING CO., LTD. Corporate Communications Dept, Corporate Planning & Control Division
Tel: (+81) 45-786-7513

https://www.nhkspg.co.jp/hubfs/nhkspg.co.jp/en/pdf/news/ir/2026/20260806_01_en.pdf | August JPY6bn equipment phase starts FY2027; doubling ambition includes future, uncommitted expansions.

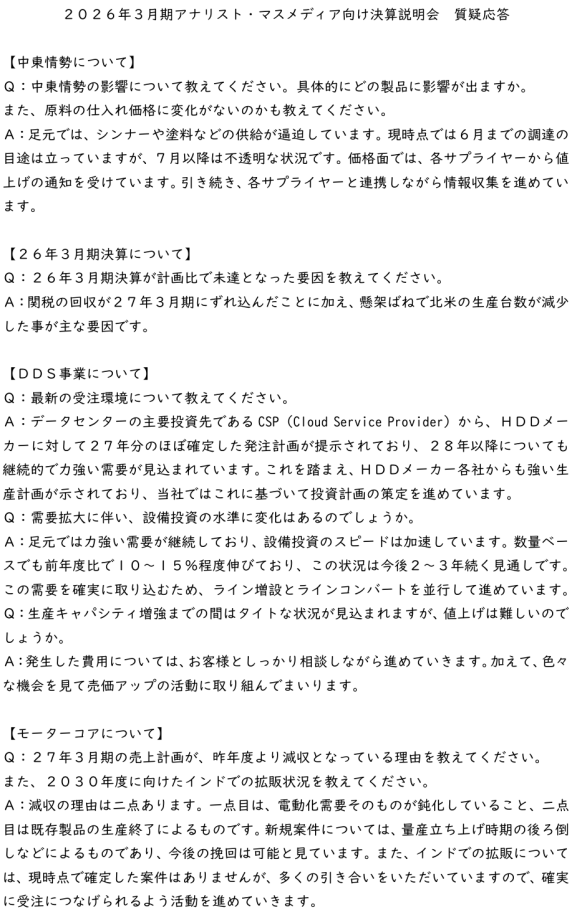

Probability-weighted opportunities

The model contains five independent economic adjustments, with correlations handled through non-overlapping revenue pools. Probabilities are subjective judgments about the specified incremental outcomes, not source-authenticity scores.

Signal	Probability	Conditional economic increment and timing	Cost treatment
Qualified DDS output above reference	65%	3.6/9/14/16bn additional sales in CY2027/28/29/30, after reference 10% near-term growth	35% incremental GP,6% extra engineering/SG&A;29%OP
DDS renewed/new-order price	55%	3% increase on 50% of reference DDS revenue; gradual 2027 acceptance, full 2028, then fade	35% absorbed by extra production costs and 5% commercial/qualification costs;60%OP conversion

Signal	Probability	Conditional economic increment and timing	Cost treatment
Process-component qualified capacity	55%	1/2.5/4/4.3bn sales above reference in 2027-30	36%GP less 8%SG&A;28%OP
Electrification recovery beyond reference	30%	0.5/1.5/3/5bn incremental sales in 2027-30	25%GP less 10%SG&A;15%OP
Currency/cost shortfall	25%	Additional 0.5% reference-revenue GP drag fromQ2/27	Direct OP cost; no duplicate revenue haircut

The pricing premium excludes output-branch revenue, so price and volume are not multiplied into an unmodeled extra interaction. Existing contracts need not reprice. Higher utilization is already in reference/product margins and the 35% output contribution, not another blanket margin bonus. Demand management guidance and capacity releases are related evidence for the same output realization, not multiple independent shocks.

２０２６年３月期アナリスト・マスメディア向け決算説明会　質疑応答

【中東情勢について】
Ｑ：中東情勢の影響について教えてください。具体的にどの製品に影響が出ますか。
また、原料の仕入れ価格に変化がないのかも教えてください。
Ａ：足元では、シンナーや塗料などの供給が逼迫しています。現時点では６月までの調達の目途は立っていますが、７月以降は不透明な状況です。価格面では、各サプライヤーから値上げの通知を受けています。引き続き、各サプライヤーと連携しながら情報収集を進めています。

【２６年３月期決算について】
Ｑ：２６年３月期決算が計画比で未達となった要因を教えてください。
Ａ：関税の回収が２７年３月期にずれ込んだことに加え、懸架ばねで北米の生産台数が減少した事が主な要因です。

【ＤＤＳ事業について】
Ｑ：最新の受注環境について教えてください。
Ａ：データセンターの主要投資先である CSP（Cloud Service Provider）から、ＨＤＤメーカーに対して２７年分のほぼ確定した発注計画が提示されており、２８年以降についても継続的で力強い需要が見込まれています。これを踏まえ、ＨＤＤメーカー各社からも強い生産計画が示されており、当社ではこれに基づいて投資計画の策定を進めています。
Ｑ：需要拡大に伴い、設備投資の水準に変化はあるのでしょうか。
Ａ：足元では力強い需要が継続しており、設備投資のスピードは加速しています。数量ベースでも前年度比で１０～１５％程度伸びており、この状況は今後２～３年続く見通しです。この需要を確実に取り込むため、ライン増設とラインコンバートを並行して進めています。
Ｑ：生産キャパシティ増強までの間はタイトな状況が見込まれますが、値上げは難しいのでしょうか。
Ａ：発生した費用については、お客様としっかり相談しながら進めていきます。加えて、色々な機会を見て売価アップの活動に取り組んでまいります。

【モーターコアについて】
Ｑ：２７年３月期の売上計画が、昨年度より減収となっている理由を教えてください。
また、２０３０年度に向けたインドでの拡販状況を教えてください。
Ａ：減収の理由は二点あります。一点目は、電動化需要そのものが鈍化していること、二点目は既存製品の生産終了によるものです。新規案件については、量産立ち上げ時期の後ろ倒しなどによるものであり、今後の挽回は可能と見ています。また、インドでの拡販については、現時点で確定した案件はありませんが、多くの引き合いをいただいていますので、確実に受注につなげられるよう活動を進めていきます。

https://www.nhkspg.co.jp/hubfs/nhkspg.co.jp/pdf/ir/library/meeting/2026/2026_03_QA.pdf | Management says suspension units growing 10-15%; expects strength for 2-3 years and will pursue higher selling prices. Japanese original; translated in narrative.

Financial resilience, shares and common-equity claims

At June 30, cash/deposits were 125,891m; borrowing and bonds totaled 57,270m, with 2,221m lease liabilities. The group remains net cash on these reported definitions, but deposits are not all necessarily distributable surplus. No cash or security-portfolio uplift is added to the operating ceiling. FY3/26 operating cash flow 77,446m included non-recurring retirement-trust flows; it is not an unqualified recurring funding run rate. May's FY3/27 capex plan 58,700m predates the July/September programs, whose full multiyear amounts are not all expensed in one year.

Issued shares 231.066144m less treasury 28.470909m equal 202.595235m at June 30. That is a point-in-time net common count, not a future diluted forecast. The model adds 0.15% a year for awards, uses the end of each four-quarter earnings window and gives no credit for hypothetical buybacks. No split has been identified on the current reporting/quote basis.

Consolidated OP includes earnings belonging to minority holders. FY3/26 minority net profit was JPY768m out of JPY28,630m group profit (2.68%); the latest quarter was JPY426m out of JPY16,152m (2.64%). The model applies a 3% minority attribution reserve to both reference consolidated OP and every probability-weighted increment. This is a net-profit-share proxy for operating attribution, not a claim that subsidiary-level OP is disclosed. It avoids valuing consolidated earnings entirely for parent common holders. No fixed book-NCI claim is also deducted. Tax, interest and securities gains are excluded from the operating model.

Valuation and model cross-check

Q4 2027 prices Q4 2027 through Q3 2028. Active consolidated F4Q OP is JPY78,192.176833m; after the 3% minority reserve, common-attributable OP is **JPY75,846.411528m**. Applying 20x and dividing by 203.279635m modeled shares gives **JPY7,462.273485 per share**. The no-increment reference on the same attribution, window and share basis isJPY7,315.124409. This is a model ceiling, not a broker target or guaranteed trading price.

Calendar year	Active revenue, JPYm	Common-attributable OP, JPYm	Reference common OP, JPYm
2027	884,443.717	65,018.604	64,711.836
2028	938,352.480	78,583.520	76,789.080
2029	985,543.559	89,265.635	86,478.446
2030	1,027,557.766	97,322.418	94,285.056

Near-term guidance is anchored exactly. Beyond 2027, forward margins, foreign exchange, auto stabilization and customer acceptance become increasingly consequential assumptions. The original 18 quarterly rows, all six revenue/GP vectors, every conditional branch and 15 exact rolling ceilings are in model.json for the parent to publish with the final artifact. The October 7 exchange close isJPY3,942; it is a ranking snapshot, not part of the operating thesis.

Score, competition and risks

Category	Score	Reason
Core thesis	14/20	Precision positioning and process qualification; diversified-company dilution and alternative qualified supply prevent monopoly classification.
Cycle stage	8/10	Demand ramp with 2027/28 deliverable capacity, not just a distant invention.
TAM expansion	7/10	Storage and process parts extend content; electrification requires new wins.
Catalysts	4/5	Results, new-line operation and Thai completion are dated.
Macro	8/10	AI storage/process spending offsets only part of automotive cyclicality.
Alpha	4/5	Japanese calls reveal price mix, site scope and component-level growth.
Risks	-5	Five classes below.
Total	40/60 =67%	Watchlist.

Risk 1: HDD-customer concentration and competing suspension/head-stack ecosystems. Toshiba gains are not automatically NHK gains; changes in head technology, platter count and supplier qualification can change content. Risk 2: precision yield, acceptance and new-facility execution can turn nameplate output into unsaleable inventory. Risk 3: auto production, tariff recovery and customer concentration can absorb DDS earnings. Risk 4: yen/baht, material and wage costs can offset a contractual price increase. Risk 5: capital allocation/governance, overlapping investment programs and minority claims make consolidated growth an imperfect proxy for per-share returns. Each class is separately deducted once.

Competing supply is concrete: TDK-owned Magnecomp and Hutchinson both market HDD suspension assemblies; Hutchinson also supplies micro-actuators. SAE Magnetics separately manufactures recording heads and assembles them onto suspensions as HGA/HSA. These are different steps, so Toshiba adding heads does not establish a matching NHK suspension award. The competitor product pages establish alternatives and qualification complexity, not current market shares. Magnecomp, Hutchinson, SAE.

The annual filing's risk and development sections explicitly discuss price competition, customer changes and technology obsolescence; no source establishes NHK as sole supply. Do not import a high HDD margin into the auto divisions. The main cross-book watches are STX/WDC drive output versus suspension content, TDK's head/assembly ecosystem, and qualified component demand from major process-equipment manufacturers. All are research links, not newly asserted customer awards.

Tests that change the model

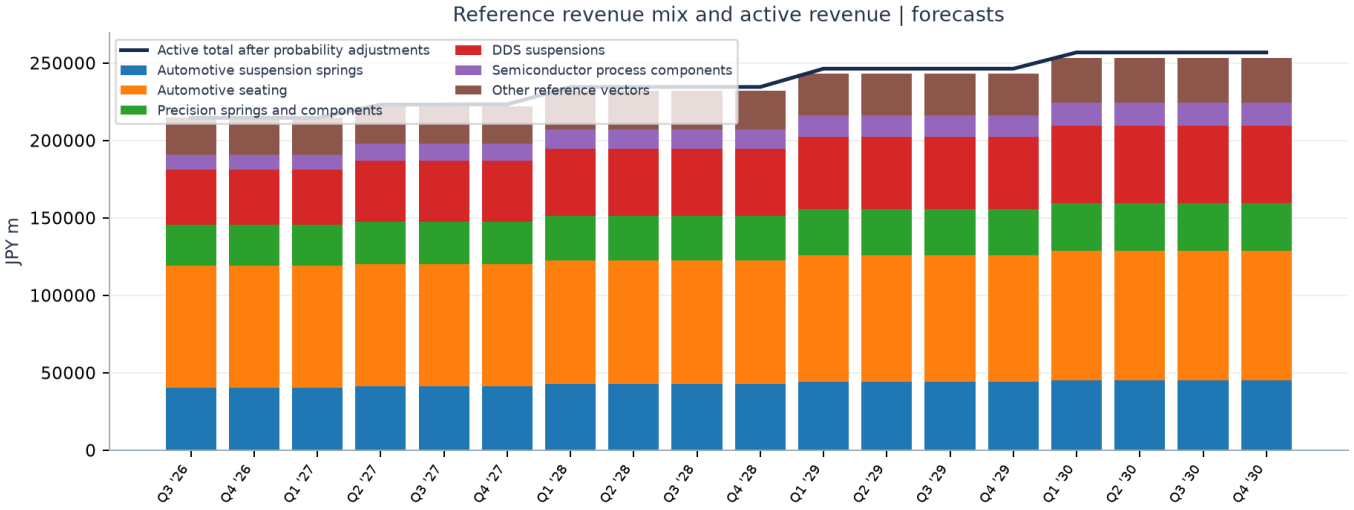

Raise DDS realization probability only when added lines produce accepted units, with demand and unit margins matching the plan. Cut it if the additional lines or Thailand qualification slip by two quarters. Price realization requires a net price/cost bridge, not a higher blended ASP caused by prototypes. Process upside requires production utilization and customer equipment acceptance; a later plant shell alone is insufficient. Remove the small electrification increment after a sustained two-year program delay. Revisit costs when FX and wage recovery are demonstrated.

Sources, original PDFs, hashes, nine point-of-use exhibits and outstanding gaps accompany evidence.json. All figures are JPYm unless specified. Long-range values are low-confidence model assumptions.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	14	High-precision DDS oligopoly and qualified process parts, diluted by large competitive automotive businesses.
Cycle	8	High-capacity HDD demand is ramping; accepted output from2027/28 expands the earnings window.
TAM	7	Storage and semiconductor process content are established; motor-core/thermal adjacencies remain qualified opportunities, not universal monopoly.
Catalysts	4	November2026 results,2027 extra-line starts and December2027 Thai building completion.
Macro	8	Data-center storage and wafer-process investment support demand; automotive offset remains material.
Alpha	4	Japanese issuer QA, product tables and site-specific capacity permit differentiated analysis.
Risk classes	-5	Five separate classes: concentrated HDD customers/competitive alternatives; qualification/yield and new-facility execution; auto demand/tariffs; FX/input costs; capital allocation/governance and minority claims.
Total	40/60	Rounded Base 67. Both artifact and new workbook row use this score; this is not a manual override.

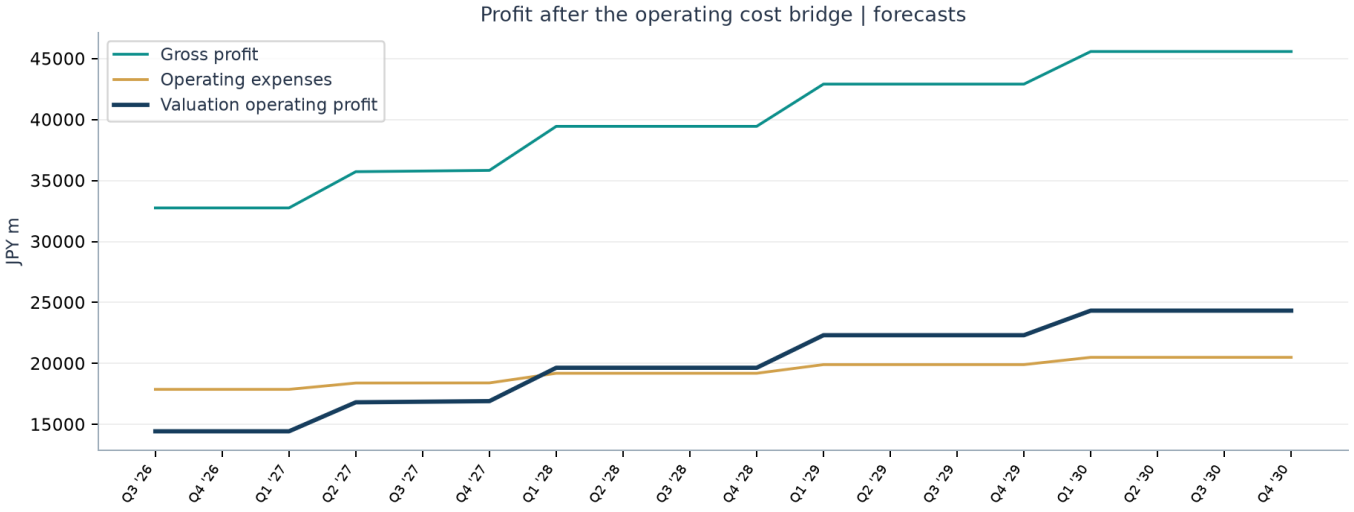

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	214,613.7	0.0	214,613.7
Q4 2026	214,613.7	0.0	214,613.7

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	Automotive suspension springs	40,193.0	10.0%	4,019.3
Q3 2026	Automotive seating	78,975.0	11.0%	8,687.2

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Weighted OP below is after the stated minority operating-profit attribution. Conditional gross profit and expenses remain consolidated figures.

Claim decisions, overlap and triggers

NHK-DDS-GOOD-OUTPUT

date: 2026-09-17

source ids: FY26_QA Thailand_expansion DDS_incremental_lines

p: 0.65

hypothesis: Additional qualified DDS output beyond the reference 10% 2027/28 unit growth, using phased lines and Thailand capacity; no whole-company 1.6x assumption.

reference: FY3/27 DDS144000; CY2027 reference154254.333 JPYm because Q1 retains fiscal guidance, while April-December annualized reference is158400; CY2028 reference174240. Flat reference realized ASP means revenue growth is the unit/mix proxy.

Conditional: Incremental DDS revenue 2027:3600; 2028:9000; 2029:14000; 2030:16000 JPYm. At JPY130 per equivalent suspension, 27.7/69.2/107.7/123.1m incremental units. ASP is a calibration proxy, not disclosed.

bounds: JPY100-160 per equivalent suspension; 2027 incremental 1800-5400 and 2028 4500-13500 JPYm.

overlap: Reference already absorbs most announced demand/capacity. Indicative Thai40% site share x60% expansion gives34,560m revenue capacity at FY3/27 runrate; only9000m above-reference revenue by2028 conditional. Toshiba orders are not added separately.

cost bridge: Conditional revenue x35% incremental gross profit after materials, labor, yield loss and depreciation; incremental launch/engineering SG&A6% of revenue. Net conditional OP29%; p applied once.

timing: 2027 starts small before Thailand completion; new Thailand building December2027, meaningful qualified output2028 onward.

why p: Management 10-15% volume-growth expectation plus committed incremental sites, tempered for head availability, qualification and actual customer demand.

counter: Reduce to35% if incremental lines miss two quarters or new accepted units fail to rise; increase to80% on two successive quarters of accepted volume at plan.

NHK-DDS-REPRICE

date: 2026-05-11

source ids: FY26_QA H1_FY26_QA FY26_deck

p: 0.55

hypothesis: A3% gross price increase on50% of reference DDS sales becomes realizable on renewed/new terms from2027.

reference: No general scarcity premium in reference; reference includes normal product transitions and FY3/27 guide.

Conditional: Reference DDS sales x50% eligible x3% gross premium xtiming ramp. Extra materials/wages/expediting consume35% of added sales; commercial/qualification SG&A5%.

bounds: 1-5% premium on25-65% eligible sales; not a claim that all backlog reprices.

overlap: Premium applies only to reference revenue, excluding output-branch revenue. No additional blanket GM uplift. Existing DDS margins remain below historical prototype-rich peak.

cost bridge: Conditional GP=65% premium revenue; incremental SG&A=5%; conditional OP=60%.

timing: Q2/27 25%, Q3/27 50%, Q4/27 75%, 2028 full; 2029 75%,2030 50% as capacity responds.

why p: Specific management intention to seek price increases and high customer cost of missed HDD supply; prototype-to-volume price declines and bargaining power limit conversion.

counter: Reduce if reported price bridge remains negative beyond mix; increase only with realized terms and cost reconciliation.

NHK-PROCESS-EXPANSION

date: 2026-08-06

source ids: Process_components_expansion FY26_deck

p: 0.55

hypothesis: Part of announced additional process-component capacity monetizes beyond reference, while preserving a separate reference path below the FY3/31 sales ambition.

reference: FY3/27 process sales38200; CY2027 reference41983.333 because Q1 retains fiscal guide, April-December annualized43000; CY2028 49000,2029 55000,2030 60000 JPYm.

Conditional: Above-reference revenue1000/2500/4000/4300 in CY2027/28/29/30. CY2030 upper endpoint64300 matches the order of magnitude of issuer FY3/31 ambition; different periods are explicitly not equated.

bounds: Additional2028 sales1000-4000 JPYm; installation fromFY2027 requires customer tool qualification.

overlap: The announced doubling is not another2x on top of64300; most expansion supports the reference. Process and HDD products are distinct pools.

cost bridge: Conditional GP36%, additional engineering/SG&A8%, OP28%, with production depreciation already in GP.

why p: Issuer funded initial6bn equipment phase and a specific sales ambition; future land/building phases are not yet committed and NAND cyclicality matters.

counter: Cut if equipment acceptance slips or customer tool orders retreat; raise with utilization and margin confirmation.

NHK-AUTO-RECOVERY

date: 2026-05-11

source ids: FY26_QA FY26_deck

p: 0.3

hypothesis: Partial recovery of motor-core/metal-substrate revenue toward stated long-term aspirations beyond modest reference growth.

reference: All existing auto, precision and residual industrial growth remains in reference; explicit product opportunity only adds small demand above it.

Conditional: Extra revenue500/1500/3000/5000 in CY2027/28/29/30 JPYm; 25%GP less10%SG&A.

bounds: Zero to5000m CY2030 increment vs much larger management ambitions; no assumption of confirmed Indian customer award.

overlap: No extra physical-AI or EV TAM addition; this one branch covers those overlapping aspirations.

why p: Credible inquiries but no confirmed Indian program and documented motor-core delays; single management opportunity starting weight30%.

timing: Small2027 qualification, gradual2028-30 conversion.

counter: Remove increment after a two-year qualification miss; increase on named program production.

NHK-FX-COST

date: 2026-08-06

source ids: Q1_FY27_financials FY26_deck

p: 0.25

hypothesis: Persistent adverse currency, wages and automotive recovery costs erode an additional0.5% of total revenue from2027Q2.

reference: Reference retains current cost base and only measured margin recovery.

Conditional: GP reduction=0.5% of reference revenue; no revenue reduction or duplicate utilization penalty.

bounds: 0-1% of sales cost drag.

overlap: Separate residual macro risk after modeled branch costs; avoids counting2026 realized FX losses twice.

cost bridge: Negative GP directly reduces OP; this is not an earnings multiple haircut.

why p: Documented FX/Thai labor sensitivity and weak auto profitability, bounded rather than a collapse case.

timing: Q2/27 onwards.

counter: Remove when hedging and recovered customer pricing offset costs for two quarters.

Remaining bounded uncertainties

- DDS unit shipments, ASP, site share and new-line good-unit capacity are not disclosed; JPY130 and40% Thai contribution are bounded calibration proxies.

- Q2 2026 process-component sales within industrial segment are not separately disclosed; JPY9000m proxy affects intra-segment quarterly allocation, not reported total or FY guide.

- The3% minority OP reserve uses FY3/26 minority net profit768/28630=2.68% and Q1FY3/27 minority426/16152=2.64%; net-profit shares are an imperfect OP proxy. Subsidiary-level OP attribution is not disclosed.

- Gross margins by product are not reported; proxies calibrate total OP to current guidance.

- No future buybacks assumed.0.15% annual dilution reserve covers awards, not an issuer forecast.

- Process-capacity doubling requires future phases in addition to the announcedJPY6bn; no fixed completion date disclosed.

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
