6510.TWO - Chunghwa Precision Test Tech (CHPT) | Full Deep Dive

Full active edition | Financial methods and portfolio Base overrides preserved.

October 5, 2026 update: September revenue reconciled

Active Q4 2027 price target: TWD 2,184.694118 per share, unchanged. Analytical Base 80/100; protected portfolio Excel Base 80/100, both unchanged.

Q3 monthly sales 1,904.677M, +0.25% vs forecast. Revenue anchor and dependent Q3 profit estimates updated; margins remain forecasts. Later-quarter inputs and Q4 2027 ceiling unchanged.

Q3 2026 prior forecast versus reported monthly-sales sum. TWD millions. Quarterly margins and OP are still modeled.

Reported monthly revenue	TWD millions
July 2026	614.606
August 2026	638.311
September 2026	651.760

Reported monthly revenue	TWD millions
Q3 monthly sum	1,904.677
Prior Q3 forecast	1,900.000
Q3 change	+0.2462%

Decision ledger (approved model treatment): Reported monthly revenue sum replaces Q3 forecast, probability100% for reported figure; product mix/margins/opex remain model assumptions. Do not infer actual OP. Future period input assumptions and existing custom multiple/share conventions retained. No unreported HBM or pricing addition. Q3 is outside Q4 2027 valuation window.

Source and dates: MOPS September consolidated revenue disclosure, company code 6510, ROC year 115, month 09; original monetary unit TWD thousands, divided by 1,000 for the table above. Retrieved October 5, 2026. MOPS table provides period but not first-publication timestamp; October 5 is retrieval date, not a proven initial-release date. The July/August figures retain their existing source provenance: Current artifact reported history; not freshly re-retrieved in this packet.

The company has reported monthly revenue, not a complete Q3 income statement. Product allocations, gross margins, operating expenses and OP remain explicitly modeled. The existing multiple, profit definition, share convention and protected Excel Base are retained. All later-quarter operating assumptions are retained.

Affected ceiling quarter	Previous target TWD	Updated target TWD	Change
Q3 2026	1,592.923529	1,593.788702	+0.0543%

September 21, 2026 | Framework 6.0.2 | NOT HELD | STRUCTURAL - advanced semiconductor test interfaces | High Conviction

Analytical Base: 48/60 (80%). Valuation: 20x forward four-quarter IFRS-style operating profit.

Snapshot: TWD 3,520.00 per share on September 18, 2026 TPEx close; 32.889 million shares, implying TWD 115,770.97 million equity value. Source [CHPT-9]. Price is a dated header snapshot, not a valuation input in the body.

Active horizon Q4 2027 ceiling: TWD 2,184.69/share. Q1 2028: TWD 2,308.68/share.

All financial model amounts are TWD millions, shares in millions, unless stated. Calendar-year reporting. User alias 6510.TW is TPEx-listed 6510.TWO. CHPT here is the Taiwan test-interface company, not the US ChargePoint ticker. Header shares are approximate, inferred from rounded Q2 net income/basic EPS.

1. Thesis, bottleneck and expanded TAM

CHPT makes test-interface hardware that connects increasingly complex chips to test systems. Higher pin counts, power and signal-integrity requirements can increase engineering and product content per design. AI/HPC has already become a major revenue contributor; this is more than a speculative future application.

The near-term constraint is qualified production throughput. The capacity roadmap creates room for additional designs and deliveries, but installed capacity is not revenue. Customer acceptance, product mix, equipment commissioning and labor productivity still govern conversion.

The user’s September 20 LIWEI post correctly highlights expansion and harder AI testing. The scale needs a precise denominator: contemporaneous management-call reporting describes three times year-end 2025 capacity by March 2027, following roughly twice that original base by August 2026. It does not imply tripling September

2026 capacity. [CHPT-4, CHPT-10]

FormFactor offers competing high-current and fine-pitch MEMS probe-card technologies for logic and advanced packaging. CHPT's integrated engineering and manufacturing can shorten customer iteration, but does not establish monopoly pricing. Test boards, wafer interfaces and complete probe cards are different content layers; revenue categories must be reconciled before comparing market shares. [CHPT-11]

TAM expansion and S-curve

Phase	Economic exposure	Model treatment
Phase 1 - current, 100% relevance	AI/HPC interfaces and existing AP/RF/other demand	Reported Q2 application and product mix
Phase 2 - 2027-2028, 50% conceptual weight	More complete HPC probe cards and ASIC designs	Qualified capacity and new-design conversion
Phase 3 - 2029 onward, 20% conceptual weight	Higher-power test, burn-in and optical-related interfaces	Included within existing vectors; no second CPO TAM add-on

The July company deck cites a MEMS probe-card market of USD2.656B in 2026, USD3.101B in 2027 and USD3.533B in 2029. [CHPT-2] These are external forecasts reproduced by management, not CHPT guidance. The model grows faster initially through capacity and mix, then slows. HPC semiconductor sales and total hyperscaler capex are demand context, not directly capturable test-interface revenue. No disclosed unit/ASP data supports a precise capex-to-customer revenue allocation, so capacity-index and shipment-value proxies are used.

2. Latest evidence and financial anchor

The July issuer release reports Q2 sales of about TWD1,640M, gross margin 57.5%, operating margin 34.7% and net profit 494M. HPC represented more than half of sales, with strong US-related demand. [CHPT-1]

The April Chinese release and conference deck show Q1 revenue 1,357M, GM56.8% and complete probe-card revenue 405M. The third-factory total investment budget was raised to 4,087M, including construction of 2,506M. That multiyear plant project is separate from the near-term leased-space expansion. [CHPT-3, CHPT-5]

July revenue of TWD 614.606M, August 638.311M and reported September 651.760M sum to Q3 revenue of TWD 1,904.677M. This replaces the prior TWD 1,900.000M forecast (+0.25%). Monthly sales do not disclose quarterly product mix, gross margins or operating profit; those remain model assumptions. [MONTHLY-202609] The H1 exact monthly sum remains TWD 2,996.984M. [CHPT-6]

Management's July call, as reported by CNA, retained a 50-55% longer-term and H2 gross-margin range despite the stronger Q2 outcome. It described quarterly H2 growth and equipment/leased-space expansion. [CHPT-4] This model resets forward GM toward that range rather than permanently extrapolating Q2's unusually strong margin.

Period	Status	Revenue	Gross profit	Operating profit	Source
Q1 2026	Reported rounded revenue; GP/OP derived	1,357.00	770.78	397.78	CHPT-3

Period	Status	Revenue	Gross profit	Operating profit	Source
Q2 2026	Reported rounded revenue; GP/OP derived	1,640.00	943.00	569.00	CHPT-1 / CHPT-2

Actual GP above is rounded revenue times reported GM. OP uses that GP less disclosed rounded operating expenses of 373M/374M, so derived OP is approximately 397.8M/569M rather than an assertion of exact filing-line values. Q2 deck separates wafer-interface products from the complete probe-card subset. Total HPC at 56.3% of 1,640M is about 923.3M; HPC complete cards at 30.4% of 381M are about 115.8M, already inside that total. [CHPT-2] The forecast splits those exposures once, not twice.

There is no exact full-year revenue or EPS guide. The Q3 monthly-sales sum of 1,904.677M plus the unchanged Q4 forecast of 2,050M yields FY2026 revenue of 6,951.661M. The H2 margin mix stays around 54%, within management's stated range. R&D remains 12% of sales and SG&A 10.5%, close to Q2's combined expense intensity. Larger profit requires delivered shipments, not capacity announcements alone.

Balance sheet and capital allocation

The July deck reports 7,426M cash and other current financial assets, not all unrestricted cash. Q2 operating cash flow was 257M, capex89M and free cash flow168M. [CHPT-2] A January convertible had 2,000M face value and was issued at 128.43%, raising approximately 2,568.6M; the premium proceeds are not the face amount converted into shares. [CHPT-7] The broader third-factory budget consumes part of this liquidity. No net-cash bonus is added to the framework ceiling.

3. Base score and evidence ledger

Category	Score	Evidence
Core Thesis	16	Qualified interfaces gain complexity and content with advanced chips
Cycle Stage	9	Reported HPC revenue and monthly shipments already accelerating
TAM Expansion	9	MEMS, ASIC and higher-power test requirements broaden applications
Catalysts	5	March 2027 capacity target and customer qualification milestones
Macro	9	AI/HPC capex and test intensity are supportive
Alpha	4	Capacity-adjusted conversion is more useful than headline chip TAM
Risks	-4	Customer/design timing, capacity yield, margin cost, dilution/capex
Total	48/60 = 80%	High Conviction

4. Quarterly operating model

HPC interface revenue excludes the separately modeled complete HPC probe cards. The third vector holds all non-HPC and residual revenue, including non-HPC complete cards. Therefore the vectors reconcile to total company revenue without double-counting product and application disclosures. Functional expense allocations and vector GM are estimates; depreciation remains in IFRS-style OP.

Revenue vector	Driver and source	Confidence
HPC interfaces excluding complete HPC cards	CHPT-2 application mix less complete-card subset	MEDIUM near-term; LOW customer, capacity and out-year allocations
Complete HPC probe cards	CHPT-2 complete-card base; CHPT-4 qualification ramp	MEDIUM near-term; LOW customer, capacity and out-year allocations
Non-HPC and other revenue	CHPT-2 remaining company revenue	MEDIUM near-term; LOW customer, capacity and out-year allocations

Capacity index: year-end2025=1; August2026 target=2; March2027 target=3. The original September 21 forecast calibration used H2 shipment annualization of (1,900+2,050)*2=7,900M. It remains the dated reference for the unchanged 2027 forecast; it is not the updated Q3 actual revenue. Using average H2 capacity index1.9, 2027 average2.875 (Q1 ramp2.5, then3), relative yield/utilization factor0.796 and mix/ASP factor1.03 gives approximately9,801M, calibrating the 9,800M vector sum. The utilization factor already embeds conversion uncertainty; no further probability haircut is applied. The 3% mix factor is analyst-selected content improvement, not a reported list-price hike. Later revenue is 11,850/13,750/15,450M, implying 20.9%/16.0%/12.4% growth; it requires better product mix and the later plant, not another automatic tripling. Complete HPC cards rise from a small base as projects mature; exact customer allocations are undisclosed. CPO, TPU and automotive opportunities are inside these totals, not incremental stacked TAMs.

Physical and commercial drivers

Year	HPC interfaces	HPC complete cards	Non-HPC / other	Total
2027	5800	1500	2500	9800
2028	7000	2200	2650	11850
2029	8050	2900	2800	13750
2030	9000	3500	2950	15450

Vector revenue, gross margin and gross profit

For each row: vector gross profit = vector revenue x its own gross margin. The following tables expose the inputs; they are analyst model assumptions unless explicitly identified as reported or guided.

HPC interfaces excluding complete HPC cards

Quarter	Revenue	Gross margin	Gross profit
Q3 2026	1,102.71	56.00%	617.52

Q3 2029	Model	3,575.00	1,937.65	429.00	321.75	0.00	1,186.90	33.20%
Q4 2029	Model	3,850.00	2,086.70	462.00	346.50	0.00	1,278.20	33.20%
Q1 2030	Model	3,399.00	1,845.91	407.88	305.91	0.00	1,132.12	33.31%
Q2 2030	Model	3,708.00	2,013.72	444.96	333.72	0.00	1,235.04	33.31%
Q3 2030	Model	4,017.00	2,181.53	482.04	361.53	0.00	1,337.96	33.31%
Q4 2030	Model	4,326.00	2,349.34	519.12	389.34	0.00	1,440.88	33.31%

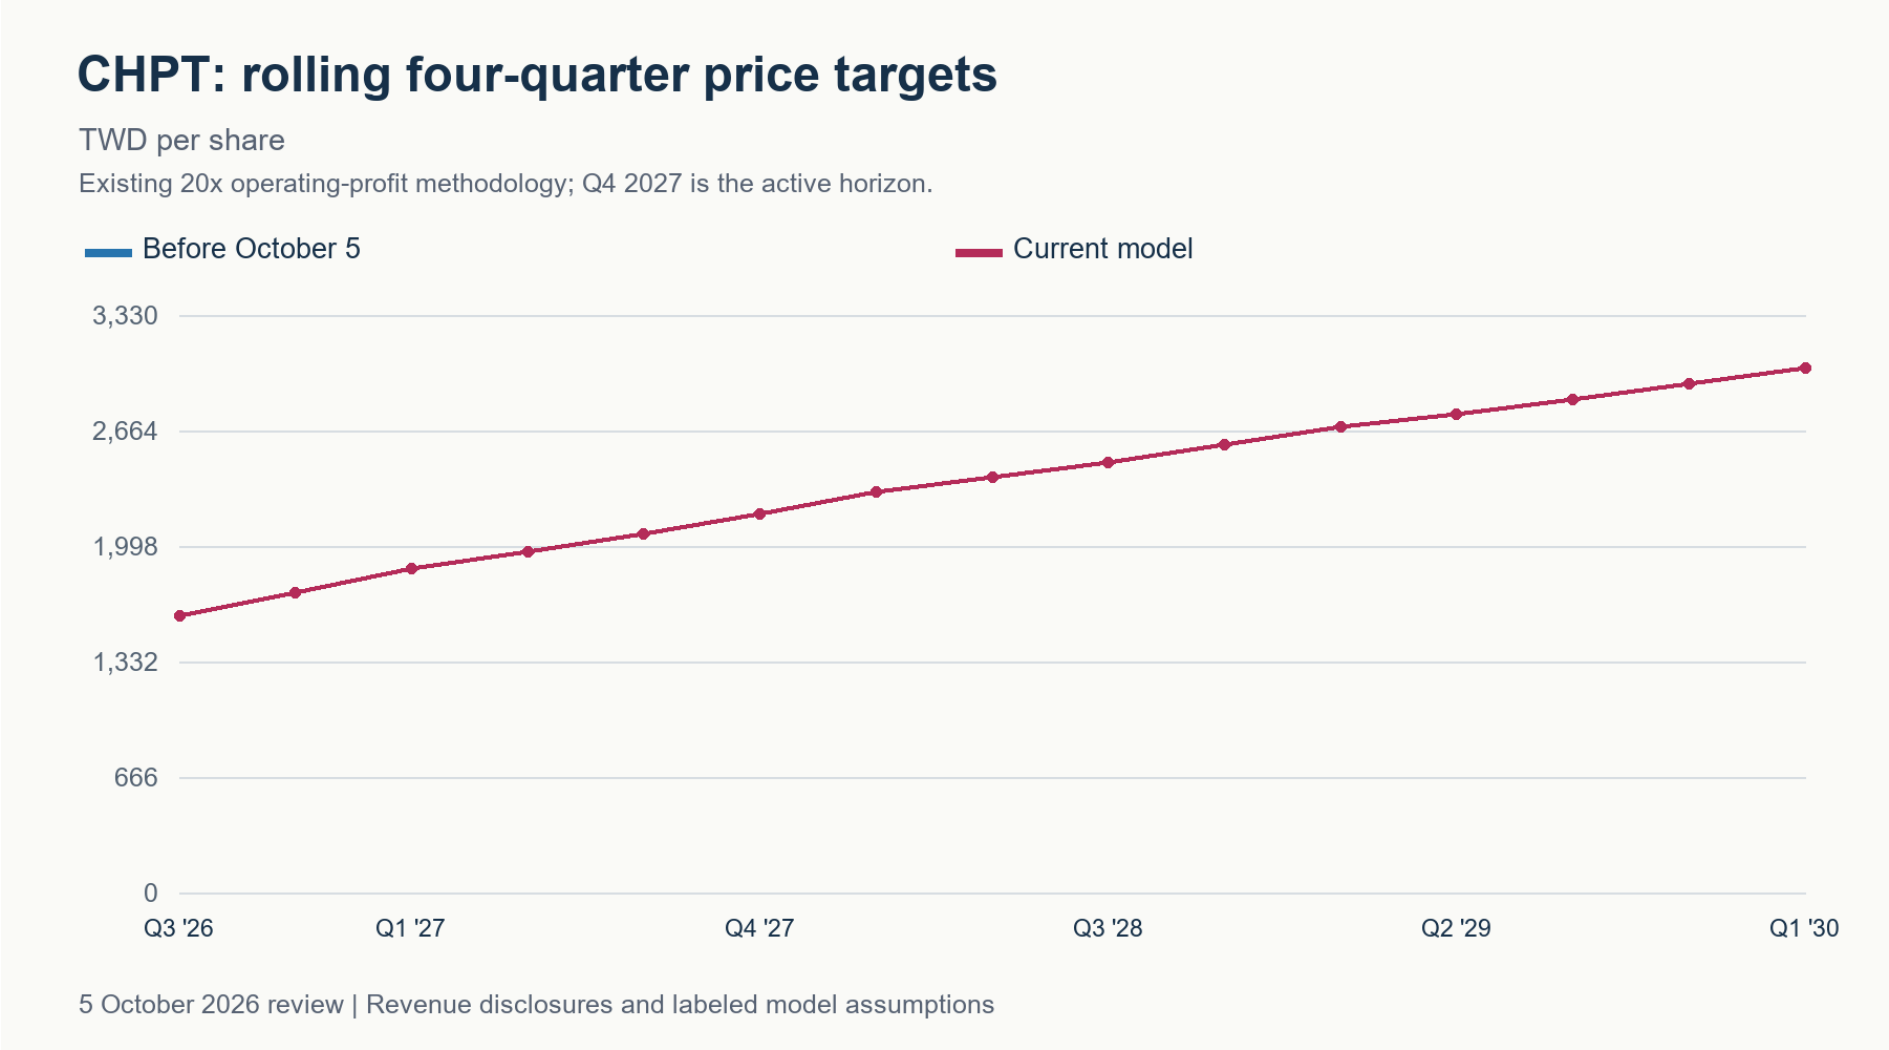

Annual trajectory cross-check

The calendar-bucket sums below are a capacity and demand cross-check; quarterly windows remain the live valuation method. Years beyond the latest guidance are model extensions, not company guidance.

Year	Revenue	Operating profit	OP margin
2027	9,800.00	3,172.00	32.37%
2028	11,850.00	3,924.75	33.12%
2029	13,750.00	4,565.00	33.20%
2030	15,450.00	5,146.00	33.31%

Forecast group GM remains near54-55%, despite rising AI mix, allowing for new-product yield and material costs. SG&A improves gradually with scale; R&D remains12%. A10% revenue miss at54% gross margin costs roughly5.4% of forecast revenue in GP before expense flex. Capacity-index arithmetic is a feasibility test, not proof that all products share one bottleneck or identical throughput.

5. Forward four-quarter ceiling and derivations

Rolling four-quarter price targets before and after October 5. TWD/share.

20x forward operating profit is an analyst-selected quality-growth test-interface multiple. Qualification, technical content and profitable growth support a premium to commodity manufacturing, while cyclicality and concentration restrain it. At16x/24x the same operating case generates80%/120% of the displayed ceilings. No automatic premium is added for a named customer rumor.

The framework convention applies the operating-profit multiple directly to diluted equity shares. It is neither a net-income P/E nor an enterprise-value bridge. No separate net-cash addition, tax conversion, probability haircut or price-dependent ranking enters this ceiling. Any probability-weighted revenue is already included once in its operating vector.

Ceiling quarter	Exact earnings window	Forward-4Q OP	Multiple	Diluted shares	Ceiling/share
Q3 2026	Q3 2026 to Q2 2027	2,709.44	20x	34.000	1,593.79
Q4 2026	Q4 2026 to Q3 2027	2,935.19	20x	34.000	1,726.58
Q1 2027	Q1 2027 to Q4 2027	3,172.00	20x	34.000	1,865.88
Q2 2027	Q2 2027 to Q1 2028	3,337.61	20x	34.000	1,963.30
Q3 2027	Q3 2027 to Q2 2028	3,518.27	20x	34.000	2,069.57
Q4 2027	Q4 2027 to Q3 2028	3,713.98	20x	34.000	2,184.69
Q1 2028	Q1 2028 to Q4 2028	3,924.75	20x	34.000	2,308.68
Q2 2028	Q2 2028 to Q1 2029	4,065.61	20x	34.000	2,391.53
Q3 2028	Q3 2028 to Q2 2029	4,219.27	20x	34.000	2,481.92
Q4 2028	Q4 2028 to Q3 2029	4,385.73	20x	34.000	2,579.84
Q1 2029	Q1 2029 to Q4 2029	4,565.00	20x	34.000	2,685.29
Q2 2029	Q2 2029 to Q1 2030	4,692.82	20x	34.000	2,760.48
Q3 2029	Q3 2029 to Q2 2030	4,832.26	20x	34.000	2,842.51
Q4 2029	Q4 2029 to Q3 2030	4,983.32	20x	34.000	2,931.36
Q1 2030	Q1 2030 to Q4 2030	5,146.00	20x	34.000	3,027.06

Complete derivation for every ceiling quarter

Q3 2026: OP window Q3 2026 to Q2 2027: (598.970793 + 651.350000 + 697.840000 + 761.280000) x 20 / 34.000000 = TWD 1,593.788702 per share. Revenue for Q3 2026 is a reported monthly-sales sum; product mix, gross profit and operating costs remain model assumptions. The existing valuation basis is unchanged.

Q4 2026: OP window Q4 2026 to Q3 2027: (651.35 + 697.84 + 761.28 + 824.72) x 20 / 34.000 = TWD 1,726.58 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2027: OP window Q1 2027 to Q4 2027: (697.84 + 761.28 + 824.72 + 888.16) x 20 / 34.000 = TWD 1,865.88 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2027: OP window Q2 2027 to Q1 2028: (761.28 + 824.72 + 888.16 + 863.45) x 20 / 34.000 = TWD 1,963.30 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2027: OP window Q3 2027 to Q2 2028: (824.72 + 888.16 + 863.45 + 941.94) x 20 / 34.000 = TWD 2,069.57 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2027: OP window Q4 2027 to Q3 2028: (888.16 + 863.45 + 941.94 + 1,020.43) x 20 / 34.000 = TWD 2,184.69 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2028: OP window Q1 2028 to Q4 2028: (863.45 + 941.94 + 1,020.43 + 1,098.93) x 20 / 34.000 = TWD 2,308.68 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2028: OP window Q2 2028 to Q1 2029: (941.94 + 1,020.43 + 1,098.93 + 1,004.30) x 20 / 34.000 = TWD 2,391.53 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2028: OP window Q3 2028 to Q2 2029: (1,020.43 + 1,098.93 + 1,004.30 + 1,095.60) x 20 / 34.000 = TWD 2,481.92 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2028: OP window Q4 2028 to Q3 2029: (1,098.93 + 1,004.30 + 1,095.60 + 1,186.90) x 20 / 34.000 = TWD 2,579.84 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2029: OP window Q1 2029 to Q4 2029: (1,004.30 + 1,095.60 + 1,186.90 + 1,278.20) x 20 / 34.000 = TWD 2,685.29 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q2 2029: OP window Q2 2029 to Q1 2030: (1,095.60 + 1,186.90 + 1,278.20 + 1,132.12) x 20 / 34.000 = TWD 2,760.48 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q3 2029: OP window Q3 2029 to Q2 2030: (1,186.90 + 1,278.20 + 1,132.12 + 1,235.04) x 20 / 34.000 = TWD 2,842.51 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q4 2029: OP window Q4 2029 to Q3 2030: (1,278.20 + 1,132.12 + 1,235.04 + 1,337.96) x 20 / 34.000 = TWD 2,931.36 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

Q1 2030: OP window Q1 2030 to Q4 2030: (1,132.12 + 1,235.04 + 1,337.96 + 1,440.88) x 20 / 34.000 = TWD 3,027.06 per share. Each OP above is the corresponding vector GP total plus any disclosed GP adjustment, less R&D, SG&A and other opex.

The final three operating quarters support earlier four-quarter windows and have no standalone ceiling. Arithmetic uses unrounded inputs; displayed components are rounded for readability.

Model34.0M diluted shares flat. Pre-conversion common shares were32.789022M; converting the full original2,000M face amount at the revised2,008.1TWD conversion price adds about0.996M, giving33.785M before a modest employee/rounding allowance. This construction avoids adding a full convertible again to a post-conversion share count. It is a planning denominator, not the latest audited diluted-share average. Conversion terms and issuance disclosures are sourced to

issuer announcements. [CHPT-7, CHPT-8, CHPT-12]

Mechanical share sensitivity

Q1 2028 denominator	Ceiling/share
Current model	2,308.68
5% more shares	2,198.74
10% more shares	2,098.80

6. Cross-book relationships and monitoring

Ardentec sells test services; CHPT sells interfaces consumed in testing. Both can benefit from more complex chips, but a service revenue dollar and its embedded interface spend are not separate industry TAM additions.

AMKR is already covered and is skipped in this batch. Advanced packaging can increase known-good-die requirements without guaranteeing CHPT wins.

Higher optical-module volumes can add testing requirements, but the Goldman module-sales forecast is not CHPT sales guidance and does not justify applying module ASPs to probe cards.

7. Scored risks and re-rate tests

Risk class	Score	Failure channel
Customer and design timing	-1	Large projects delay tape-outs, qualification or acceptance
Capacity and yield	-1	Equipment lead times and new-site yield limit sellable output
Margin and input costs	-1	New-product costs or competitive pricing keep GM below the model
Capital and dilution	-1	Factory spending, working capital and convertibles reduce per-share economics

Dated triggers and counters

Checkpoint	Positive evidence	Counter / model action
October 2026 Q3 release	Reported monthly sales sum to 1,904.677M; test quarterly margin conversion	Reassess Q4 if October shipments, customer acceptance or quarterly margins weaken
March2027 capacity checkpoint	Qualified throughput approaches three timesYE2025 baseline	Do not multiply current capacity by three again
2027 project conversion	HPC complete cards increase as accepted designs ship	Remove unqualified programs rather than using full chip TAM
2028-2030 third-factory ramp	Production and cash returns justify additional capacity	Reassess depreciation and capex if loading lags

Both April and July issuer reporting packages were reviewed, with local-language call reporting for management Q&A. Complete independent verbatim transcripts were not obtained; no claim is made that the full recordings were transcribed. The full interim financial PDF could not be retrieved, so GP/OP exactness and dilution are explicitly proxied from issuer decks and announcements. There is no assumption that an unnamed AI customer is a confirmed sole-source design win.
