VisEra Technologies

6789.TW | TWSE | 2026-10-07

Q4 2027 model ceiling: TWD 197.11

Analytical Base 39/60 = 65 | Qualified optical-process option; commercial-capture watch

20x forward-four-quarter fully expensed IFRS operating profit including normalized rental/facility operating income, plus TWD7040.067m reserved opening net cash, divided by end-window diluted shares. Quarter plus next three.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in TWD m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: TWD 484.00 per share (2026-10-06 close); 318.299 million common shares (2026-06-30); estimated equity capitalization TWD 154,056.8 million. Dated quote and latest reported issued common shares across dates; no split assumed. This dated common-share snapshot is separate from forecast diluted shares.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	2,792.6	20x	319.064	197.11

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Standalone VisEra common equity. TSMC67.11% ownership is not minority leakage from VisEra earnings. Opening net claims1049.444 bank debt+954.897 declared dividend+353.535 equipment payable+2500 operating/growth reserve-11897.943 cash=-7040.067. No future cash, property value or interest-income add-on.. 20x forward-four-quarter fully expensed IFRS operating profit including normalized rental/facility operating income, plus TWD7040.067m reserved opening net cash, divided by end-window diluted shares. Quarter plus next three.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use TWD m unless a different unit is stated.

Thesis

The active Q4 2027 model ceiling is **TWD197.11 per diluted common share**, at 20 times forward-four-quarter fully expensed IFRS operating profit. The earnings window is Q4 2027 through Q3 2028, with TWD2,792.577 million of modeled OP, TWD7,040.067 million of reserved opening net cash and 319.0641 million end-window diluted shares. Analytical Base is **65/100**, or 39/60. The forecast is an independent operating model; it is not management guidance or a bank price target.

VisEra is an established optical wafer-processing business with emerging AI connectivity opportunities. Its core economic asset is repeatable microscopic optical geometry across a wafer, combined with process integration and qualification. The photonics opportunity is real enough to receive active probability-weighted revenue. It is not large enough, on disclosed evidence, to replace the entire consumer-sensing business with a datacenter forecast.

What the customer buys

A color filter selects wavelengths before light reaches the photodiode; a microlens directs available light into the useful sensing area. As pixels shrink, uncontrolled scattering, color mixing and loss at boundaries become more consequential. VisEra supplies these optical structures and related film processes at wafer scale. It does not automatically earn the value of the image sensor's underlying logic or photodiode wafer.

The same process skills can solve a different problem in optical communication. Light leaving a small source must enter a fiber or photonic device with acceptable alignment and loss. Microlens arrays, gratings, thin films and other microstructures shape, steer or couple that light. Better coupling can reduce laser power requirements or relax assembly tolerances, but the economic benefit depends on the customer's complete optical path and packaging yield. A favorable standalone optical specification is not a production order.

The annual report explicitly describes grating and edge coupling, microlens arrays and metasurfaces used between CW lasers, micro-LEDs or micro-VCSELs and fiber arrays. Those alternatives are possible applications of a common manufacturing platform. The model does not count each label as an independent market.

伍、營運概況

一、業務內容

(一) 業務範圍

1. 本公司所營業務之主要內容

A. 研究、設計、開發、製造及銷售下列產品：
a. 彩色濾光膜 (Color Filter)
b. 影像感測元件及模組
c. 發光二極體 (LED) 元件及模組
d. 微型光學元件及模組
e. 上述產品相關之設計、開發、製造與測試
B. 兼營與本公司業務相關之進出口貿易業務。

2. 營業比重

單位：新台幣仟元；%

項目 \ 民國年度	113 年度		114 年度	
	營收金額	百分比	營收金額	百分比
微型光學元件	3,036,810	30.36	1,941,232	21.72
影像感測器	6,743,515	67.42	6,804,712	76.13
其他	221,749	2.22	192,224	2.15
合計	10,002,074	100.00	8,938,168	100.00

3. 公司目前之商品 (服務) 項目：

產品別	項目	主要商品 (服務) 項目
影像感測器	晶圓級彩色濾光膜與微透鏡技術 超穎透鏡技術	光學影像感測器，主要用於手機、車用、監控、醫療、ARVR及其他消費性電子產品、人形機器人、無人機等
微型光學元件	晶圓級光學薄膜技術	3D 感測元件 多通道環境光感測器、接近光感測器、屏下光學指紋感測器
	整合性晶圓級彩色濾光膜與光學薄膜技術 超穎透鏡技術 表面浮雕光柵	3D 感測器 (ToF 飛時測距感測器)、光感測器、光學生物感測元件與 SRG 光波導、眼動追蹤感測器、DOE 衍射光學元件、光達
其他	其他服務 微型顯示器 Silicon Photonics 矽光子	低溫彩色濾光膜及微透鏡製程、影像感測器工程測試服務、晶圓級量子效率測試、晶圓級斜向入射光量測系統、光學模擬與設計、光罩設計服務、製程整合及光譜轉換效率分析。 用於光達、光通訊、資料中心與高速運算等矽光子結構之微透鏡製程技術與製程設計包 (PDK)。

4. 計劃開發之新產品 (服務)

本公司計劃開發下一代新產品及服務

開發項目	技術	應用	市場
彩色濾光膜與微透鏡	超穎透鏡結構 Nano light pillars 結合 PDLR 設計	高階畫素影像感測器	智慧型手機
晶圓級光學 – 生物感測元件	半導體光學整合技術	光學生物感測元件	生醫市場
晶圓級光學 – 光學元件	短紅外波段 超穎表面 (metasurface)	衍射光學元件 DOE 用於人臉辨識光學元件、眼動追蹤感測器、3D 感測器	行動裝置 AR/VR
晶圓級光學 – 光學元件	可見光波段 超穎表面 (metasurface)	影像感測器之鏡頭模組	行動裝置、 AR/VR
晶圓級光學 – Optical combiner	表面浮雕光柵光波導 (NIL, Litho)	擴增實境 (AR) 眼鏡的顯示元件	AR 眼鏡
晶圓級光學 – 矽光子元件	矽光子平台技術	光達、資料中心、血糖感測	高速運算與汽車
晶圓級光學 – 紅外光感測器	紅外光感測技術 (量子點)	生理訊號感測 紅外光感測器	醫療感測器、穿戴裝置、智慧家電

二、產業概況

1. 產業現況與發展

(1) 光學感測器產業之現況與發展

❶ 全球 CIS 產業概況：2025 年，全球 CMOS 影像感測器（CIS）產業走過庫存調整期，正式重回成長軌道。根據 Sigmaintell 統計報告顯示，2025 年全球 CIS 市場產值達 240 億美元，年增長率為 9%。展望中長期，隨著感測技術在各類應用領域的滲透率持續深化，預估至 2030 年，整體市場產值將突破 300 億美元大關，顯示產業具備堅實的長線成長基礎。

❷ 晶圓需求結構性轉變：規格升級驅動量能在產能需求方面，市場正經歷結構性的轉變。受惠於終端產品對極致影像品質的追求，感測器規格正朝向「高畫素（Higher Resolution）」與「大尺寸（Larger Sensor Size）」趨勢發展。此趨勢大幅增加了單顆晶片所需的晶圓面積，部份抵銷了終端裝置出貨量波動的影響。

VisEra original annual 2025 zh, PDF page 34. Read the product scope and units in the source.

奈米壓印技術與自製模具能力（Nano-imprint）：針對消費級、大規模量產需求，提供成本具競爭力的壓印方案。

光微影蝕刻技術（Litho-etching）：針對高階、高效能應用，利用高精度半導體蝕刻設備，製造高品質光柵。

同時擁有此兩項主流技術，使本公司能提供完整製程服務，全方位滿足不同市場取向的 AR 眼鏡需求。

綜上所述，就整體技術深度與製程廣度而言，本公司具備領先優勢，無論是在高階機台的資本投入，或是新技術節點的開發，本公司皆能與國際客戶保持緊密的合作關係，成為客戶在光學半導體領域不可或缺的技術合作夥伴。

(三) 技術及研發概況

本公司作為全球少數具備晶圓級光學整合能力的專業代工廠，憑藉獨特的光學設計與整合製程，持續在高階市場保持領先。以下為四大核心技術之研發成果與佈局：

1. 影像感測器（CIS）：深化高階製程，突破微縮極限

- 透過精密奈米級光學結構，大幅提升了微小像素的集光效率與訊號處理能力，使其性能能與大尺寸像素並駕齊驅。這意味著裝置不再需要龐大的鏡頭模組，即可在維持極致纖薄的同時，擁有媲美專業級的感光與解析力。

2. 晶圓級光學元件：技術和應用佈局

- 多通道環境光感測器（Multi-Channel）：整合微透鏡與窄帶濾光多層膜技術，幫助薄型化。本公司「新一代金屬薄膜製程（Metallic Film）」已成功開發，將可望逐步導入智慧手機環境光感測器應用。

- 超穎表面技術（Meta-surface）：本公司聚焦於 3D 感測、醫療感測器及光通訊市場應用，技術涵蓋可見光至不可見光波段。

3. 矽光子技術平台（Silicon Photonics Platform）

- 高效光耦合：具備 CPO 所需的 Grating Coupling（光柵耦合）與 Edge Coupling（邊緣耦合）之高階製程能力。另外我們利用 Microlens Array（微透鏡陣列）與 Meta-lens（超透鏡）技術，針對不論 CW Laser、Micro-LED、Micro-VCSEL 等微型光源與 FAU（光纖陣列）間光的耦合進行精準的光束準直，能降低光損耗並提升整體傳輸效率。

4. AR 眼鏡 SRG 表面浮雕光柵技術

- 完整製程與新材料開發佈局：針對 AR 智慧眼鏡的顯示技術，本公司積極研發完整的製程解決方案，涵蓋奈米壓印（Nano Imprint）與光微影蝕刻（Litho-etching）製程。同時，為因應次世代光波導需求，針對高平坦度玻璃晶圓（Glass Wafer）與碳化矽（SiC）基板進行相關製程開發，期能掌握不同材料特性的最佳化參數。

- 垂直整合能力建置：本公司開發自製壓印模具（Master Mold）能力，並逐步建置專屬的高階光學測試平台，目標是建立從製造到光學檢測的一站式開發能力。

最近五年度每年投入之研發費用

單位：新台幣仟元；%

項目 \ 民國年度	110 年度	111 年度	112 年度	113 年度	114 年度
研發費用	542,020	671,886	726,535	933,673	977,982
營業收入淨額	9,029,178	9,077,148	7,236,928	10,002,074	8,938,168

資料來源：經會計師查核簽證之財務報告。

VisEra original annual 2025 zh, PDF page 37. Read the product scope and units in the source.

The useful moat is process control, materials integration, design rules and accumulated customer qualification. A customer evaluates uniformity, optical efficiency, alignment tolerance, thermal stability, contamination and repeatability across accepted wafers. The annual report says VisEra introduced a 193 nm DUV tool for R&D at the end of 2025 and began the second phase of Longtan cleanroom construction. A cleanroom is preparation for tools; installed tools are preparation for qualified output. Neither is saleable capacity by itself.

VisEra competes with customers' internal manufacturing and alternative specialist processes. Sony and Samsung are examples of image-sensor IDMs with internal capability. The issuer describes Chinese suppliers expanding lower-end capacity and argues its small-pixel and nano-light-pillar processes remain more difficult to replicate. That is the issuer's competitive assessment, not proof that competitors cannot qualify.

The existing business is the anchor

Calendar 2025 sales were TWD8,938.168 million: CIS TWD6,804.712 million, MOE TWD1,941.232 million and other masks/NRE test services TWD192.224 million. MOE declined 36.1%, while CIS grew only 0.9%. Total OP fell to TWD1,334.779 million from TWD2,007.339 million in 2024. A photonics narrative must explain this real starting point rather than ignore its cyclicality.

The 2025 annual letter reports nearly two million eight-inch-equivalent wafers of output, including different product scopes. That does not disclose the available capacity or fee for a newly qualified optical coupling flow. Mature CIS invoice equivalents in this model use TWD4,500 per eight-inch equivalent solely as an operational bridge. The complex new optical-process fee proxy is different and is never multiplied by all company wafers.

壹、致股東報告書

各位股東女士先生大家好：

一百一十四年度營運結果

・營業計畫實施成果

民國一百一十四年度，對采鈺而言充滿機會與挑戰，受惠於手機拍攝規格升級與電動車擴大感測應用，帶動影像感測器需求持續成長，采鈺在影像感測器產品和汽車應用領域，皆分別創下營收歷史新高，全公司年度晶圓產出持續成長，達到近 200 萬片 (約當 8 吋) 的產量紀錄。然而，匯率的波動及微型光學元件產品短期需求的放緩，仍為采鈺整體營收和獲利帶來挑戰。

即便如此，采鈺對未來發展的耕耘沒有停歇，持續投入研發技術、製程能力和新興應用市場的拓展。公司發展奈米光學引進 193 奈米深紫外光 (DUV) 曝光機台，已在年底順利裝機投入研發；龍潭廠第二期無塵室也陸續開始建設，提前為產線的使用空間做準備，支持公司掌握未來營運成長的機會。

・財務收支及獲利能力分析

民國一百一十四年度，采鈺營收為新台幣 89 億 3 千 8 百萬元，因不利的匯率影響及微型光學元件需求放緩，營收較前一年減少 11%，毛利率較前一年下降至 25%；營業費用為新台幣 12 億 4 千 3 百萬元，較前一年增加 4%，主要投入研發核心技術；稅後淨利為新台幣 12 億 7 千 4 百萬元，較前一年稅後淨利減少 27%，每股盈餘為 4.01 元。

・研究發展狀況

民國一百一十四年度，采鈺研發費用達新台幣 9 億 7 千 8 百萬元，較前一年成長 5%，持續強化在半導體光學技術的領先地位。

在影像感測器方面，手機 5 千萬畫素搭配像素尺寸 1.2 及 1.6 微米的高階產品順利量產；LnG(Low N Grid) 微結構適用於小尺寸像素，幫助強化光效能表現，也已成功量產出貨。接下來，采鈺配合客戶需求開發手機 2 億畫素影像感測器，以及搭配的奈米光柱 (Nano Light Pillar) 微結構，鞏固發展次世代影像感測器的關鍵技術，吸引大客戶新一代的產品採用。

在微型光學元件濾波感測方面，采鈺的第一個使用超穎表面 (Metasurface) 技術感測器產品成功出貨，應用在消費性穿戴裝置，提供全平面、超薄化的光學元件整合。接著，重點將放在金屬層環境光感測器的產出爬升 (ramp up)，以及未來 8 吋往 12 吋幫助客戶成本效益升級、朝屏下感測發展。

在微型光學元件矽光子 (Silicon Photonics) 技術方面，采鈺積極發展 AI 運算光傳輸相關應用，插拔式 (Pluggable) 架構中，應用在檢光器 (PD) 產品已逐步導入量產；未來研發首要重點將會是共同封裝光學元件 (CPO) 架構。采鈺的矽基微透鏡 (Microlens) 陣列及各式微結構，可應用在光纖陣列 (FAU)、連接器、積體光路 (PIC)、光源 (Light source) 等傳輸節點，幫助串接對準、光耦合、光強化等功能，能有效提升光傳輸效率，符合 AI 運算技術市場需求方向。

在微型光學元件光波導 (Waveguide) 的技術開發，采鈺主力發展 AI/AR 眼鏡的鏡片顯示應用，在製程上，無論是黃光蝕刻與奈米壓印，采鈺可提供全方位的光罩、材料與製程方案，標準技術平台能夠幫助客戶產品快速量產問市，以及後續鏡片顯示技術的升級。

一百一十五年度營業計畫概要

・經營方針

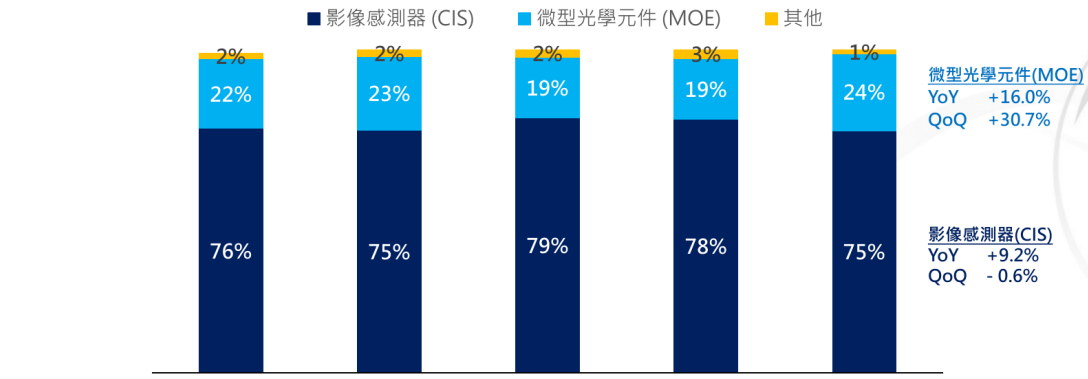

民國一百一十五年度，采鈺將更加專注於產品技術價值的提升，發展奈米光學技術，提供高效能感測、薄型化的半導體光學整合解決方案，拓展高成長潛力應用。同時，公司將持續強化營運效率與公司治理，以穩健經營為原則，增進經營績效。

VisEra original annual 2025 zh, PDF page 4. Read the product scope and units in the source.

Q2 2026 sales were TWD2,442.088 million, with GP TWD745.449 million and reported OP TWD471.880 million. Reported revenue mix was approximately TWD1,833 million CIS, TWD581 million MOE and TWD28 million other services. Model calibration using 29%, 35% and 45% respective GMs produces TWD747.520 million GP, within 0.3% of actual. Those product margins are allocation assumptions because VisEra discloses consolidated, not segment, profitability.

Applications cut across these product categories. Q2 mobile/security/automotive shares were 68%/20%/12%. Security increased 114.6% year on year, while automotive declined 18.5%. Adding security or automotive sales to CIS and MOE would double count revenue.

依產品別之季營收比重

(新台幣百萬元)	2Q25	3Q25	4Q25	1Q26	2Q26

VisEra original Q2 2026 deck, PDF page 5. Read the product scope and units in the source.

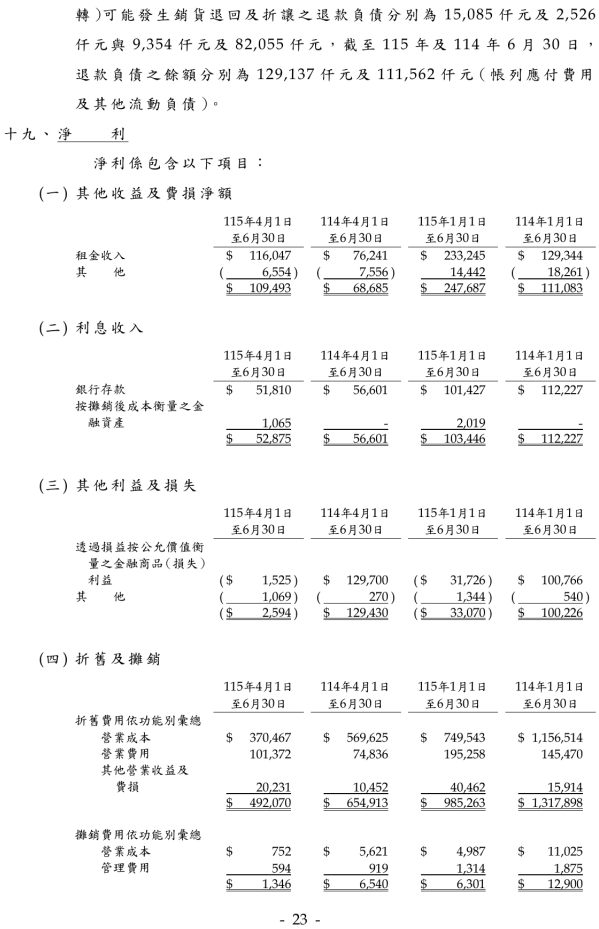

The official monthly table reports July TWD914.690 million and August TWD918.686 million. September remains blank at the October 7 research cutoff. The Q3 model of TWD2,750 million therefore includes an assumed September TWD916.624 million; it is not an announced Q3 result. Q4 is TWD2,860 million. These two quarters imply H2 product sales above H1 TWD4,790.531 million, with the uplift grounded in the newer monthly data.

The August 6 and February 12 official replay pages are archived, as are the full Q2, Q1 and Q4 financial decks and the prior management performance report. The replay pages expose audio rather than a readable transcript in this environment. Full spoken Q&A remains a disclosed source gap. Reported August remarks about late-2026 1.6T processes and H2 2027 high-density coupling are treated as attributed timing, supported by the issuer's annual technical roadmap, not as a fully verified verbatim call transcript.

Rental income is part of OP, not optical revenue

H1 reported OP of TWD1,007.959 million includes TWD247.687 million of other operating income. Within that number, gross rental income was TWD233.245 million. TSMC and GUC together contributed TWD161.598 million of rent; VisEra also supplied TSMC with facility-operation and engineering services. Other operating costs include property depreciation and personnel.

This explains why Q2 GP less disclosed operating expense does not equal reported OP: TWD745.449 million less TWD383.062 million plus TWD109.493 million equals TWD471.880 million. Excluding this income would understate the existing business, while misclassifying it as photonics sales would exaggerate commercial adoption.

轉）可能發生銷貨退回及折讓之退款負債分別為 15,085 仟元及 2,526 仟元與 9,354 仟元及 82,055 仟元，截至 115 年及 114 年 6 月 30 日，退款負債之餘額分別為 129,137 仟元及 111,562 仟元（帳列應付費用及其他流動負債）。

- 23 -

VisEra original Q2 2026 financials zh, PDF page 23. Read the product scope and units in the source.

The June filing lists minimum future fixed rent of TWD314.906 million in the next year, TWD231.916 million in each of years two and three, and TWD212.589 million in year four. These commitments are below a simple

annualization of H1 gross rent. The model therefore carries net operating rental/facility income of TWD100 million and TWD95 million in H2 2026, then TWD75/65/60/50 million per quarter in 2027/28/29/30. The future path allows some service continuity and renewals but does not assume today's gross rent lasts forever. Depreciation and staff costs are included in these net figures. There is no separate property NAV credit, interest-income capitalization or FX gain in OP.

The active revenue and earnings bridge

The reference case grows annual CIS/MOE/other revenue to TWD8.2/3.0/0.24 billion in 2027 and TWD9.9/4.4/0.30 billion in 2030. CIS growth combines modest wafer-volume growth with product content and high-end mix. MOE growth includes recovery in established sensing products and limited existing optical work. It does not assume a named CPO production win.

The five incremental branches are explicit and fully costed:

- **Optical coupling, 55% probability.** Gross candidate optical invoice volumes are 6,000/18,000/30,000/42,000 eight-inch equivalents in 2027/28/29/30 at an assumed TWD100,000 process fee. After excluding 50% already represented in reference MOE growth, conditional incremental revenue is TWD300/900/1,500/2,100 million. The fee sensitivity is TWD80,000-120,000; accepted invoice volume can range from half to one and a half times the central path. Recognition starts H2 2027, split 35%/65% between Q3 and Q4. Incremental GM is 45% after yield loss and depreciation, with 15% of sales for applications, qualification and R&D. The 2027 probability-weighted OP contribution is TWD49.5 million. - **Nanoscale sensing and AR, 40%.** Beyond-reference commercial invoices contribute a conditional TWD250/650/1,100 million in 2028/29/30. This uses 5,000/13,000/22,000 process invoice equivalents, the same TWD100,000 fee proxy and 50% overlap deduction. The 43% GM and 18% development/support charge leave 25% incremental OP. No 2027 revenue is pulled forward simply because the process exists. - **Security and qualified twelve-inch migration, 60%.** An additional 8% volume on half of eligible CIS revenue produces a 4% conditional uplift in 2027/28 beyond the reference recovery. It fades to 2% in 2029 and 1% in 2030. The cost bridge is 42% GP less 10% variable operating support. Q2's existing security mix is already in the starting base. - **Qualified pricing, 40%.** New or repriceable high-end CIS invoices are assumed to represent 25% of sales. A 3% premium, bounded at 2-4%, receives a further 50% overlap reduction. The net conditional sales increment is 0.375% of reference CIS revenue in 2027/28 and fades later. GP retention is 80%, less 10% extra qualification and service cost. The resulting 2027 weighted OP is only TWD8.61 million. There is no claim that management announced a price increase, and fixed-price backlog is not repriced. - **Customer-cycle shortfall, 30%.** A 7% shortfall in reference CIS and MOE revenue is charged at 40% lost GP, offset by 5% saved operating costs. Added optical branches are excluded from this separate baseline loss pool. The 2027 weighted OP reduction is TWD82.32 million. A larger disruption remains possible.

The implied probability-weighted annual sales/OP are TWD11,578.9/2,470.8 million in 2027, TWD13,172.6/2,886.0 million in 2028, TWD14,556.9/3,253.3 million in 2029 and TWD15,959.1/3,603.2 million in 2030. The far years are lower-confidence conditional paths. They are not evidence of a contracted multiyear order book.

The pricing branch is deliberately smaller than the volume branches. Customers buy lower total optical-system cost and acceptable production yield. A change from eight-inch to twelve-inch processing can give customers a cost reduction; it need not become a permanent supplier price increase. More process steps may increase revenue per wafer while simultaneously reducing good-wafer throughput and increasing capex.

Shares, common claims and funding

VisEra's June issued common stock is 318.2991 million shares. TSMC owns 67.11%; that holding is not a noncontrolling-interest deduction from VisEra's standalone earnings. Every VisEra common share participates in the same company economics.

The 2025 restricted-share award left 0.630 million unvested shares in June. Those shares are already issued and are not added a second time. The model reserves the remaining 0.205 million authorization and adds 0.080 million hypothetical new shares per quarter from 2027. Quarterly SBC of TWD25 million remains inside projected product/operating costs; the H1 actual was TWD48.730 million. Future grant sizes and valuations are assumptions, not approved awards.

年度財務報表之會計年度，指標是否達成則以指標要求期間所對應經會計師查核簽證之財務報表為計算基礎。

獲配新股後未達既得條件前受限制之權利：

1. 限制員工權利新股發行後，應立即將之交付信託／保管，且於既得條件未成就前，員工不得以任何理由或方式向受託人請求返還限制員工權利新股。
2. 各該既得期間未屆滿前員工不得將該限制員工權利新股出售、質押、轉讓、贈與他人、設定，或作其他方式之處分。
3. 除前述限制外，員工依本辦法獲配之限制員工權利新股，於未達既得條件前之其他權利，包括但不限於：股息、紅利及資本公積之受配權、現金增資之認股權等，與本公司已發行之普通股股份相同，相關作業方式依信託／保管契約執行之。
4. 員工未達既得條件前尚在信託／保管之股份，有關本公司股東會之出席、提案、發言、表決權及其他相關股東權益事項皆委託信託／保管機構代為行使之。
5. 既得期間如本公司辦理現金減資、減資彌補虧損等非因法定減資之減少資本，限制員工權利新股應依減資比例註銷。如係現金減資，因此退還之現金須交付信託／保管，於達成既得條件後始交付員工；惟若未達既得條件，本公司將收回該等現金。
6. 本次發行之限制員工權利新股，相關資訊如下：

	114年計畫
期初餘額	$ 630
本期給與	-
本期已註銷	-
期末餘額	$ 630

本公司認列之限制員工權利新股酬勞成本請詳附註十九。

(二) 員工認股權計畫

本公司於 109 年 4 月暨 108 年 7 月及 12 月分別給與員工認股權 460 單位、5,424 單位及 72 單位，每一單位可認購普通股一仟股。給與對象為符合特定條件之員工。認股權之存續期間均為 6 年，憑證

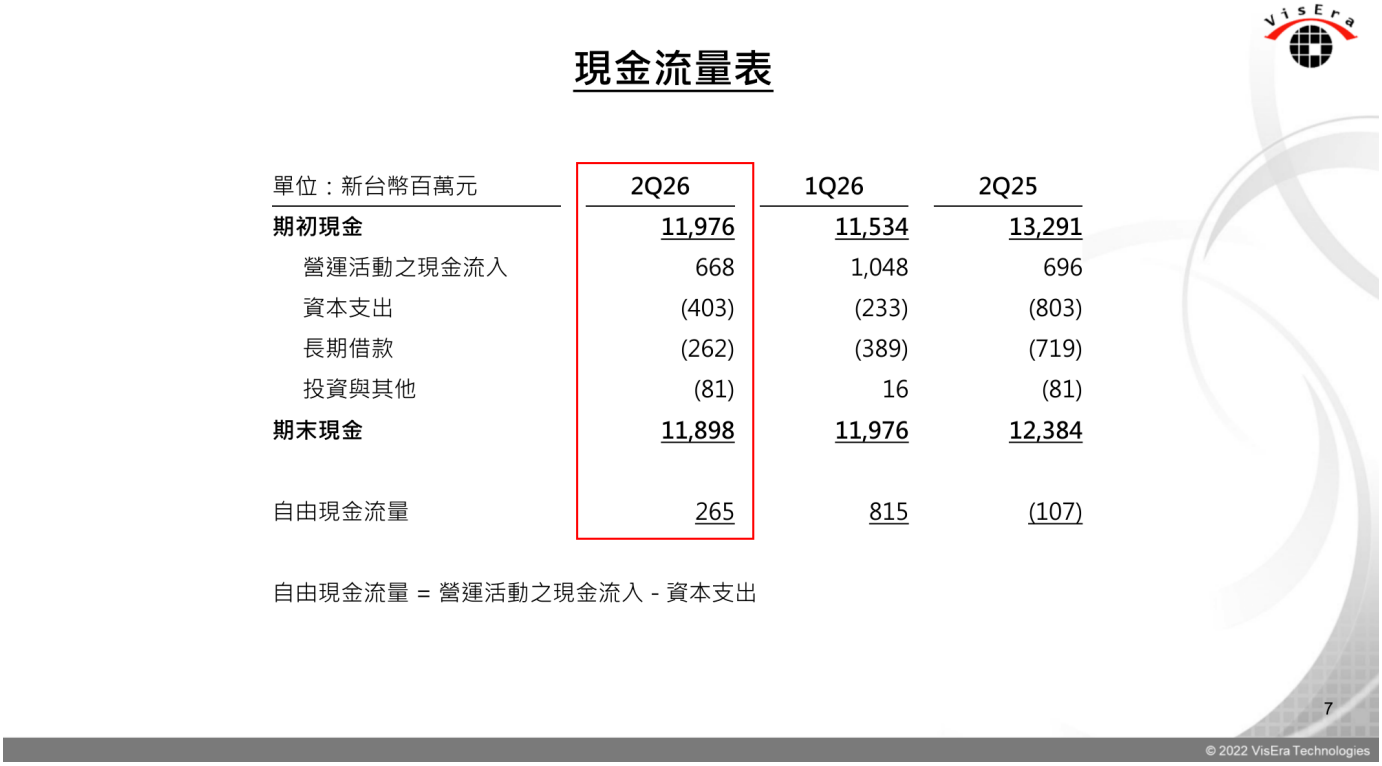

VisEra original Q2 2026 financials zh, PDF page 28. Read the product scope and units in the source.

June cash was TWD11,897.943 million, bank debt TWD1,049.444 million and lease liabilities TWD178.054 million. The opening net-cash credit is conservatively reduced by the declared TWD954.897 million dividend, TWD353.535 million equipment payable and a TWD2,500 million operating/growth reserve. It equals TWD7,040.067 million. The separately reported amortized-cost financial asset and restricted deposits receive no cash credit.

The valuation keeps leases as operating obligations with their depreciation in OP; it does not also subtract the lease balance as financial debt. The cash bridge adds back total depreciation and then subtracts lease cash payments, so it does not mistake lease depreciation for spendable cash.

All 32 combinations of the five operating branches are funded without new equity or debt refinancing under the specified spending path. The cash bridge begins at June cash, pays all TWD851.111 million current bank principal over the next four quarters and the remaining TWD198.333 million over the following two. It reserves normal quarterly capex of TWD400 million in H2 2026, then TWD650/750/650/600 million in 2027/28/29/30. Successful optical coupling adds conditional annual expansion spending of TWD1.6/1.2/0.8/0.6 billion; the nano/AR outcome adds TWD0.4/0.4/0.3 billion from 2028.

Cash taxes are 20% of positive profit after interest, working capital absorbs 25% of sequential incremental revenue, and the declared dividend is paid in Q3 2026. Subsequent annual dividends begin at TWD3 per modeled share and grow 5% annually. Opening equipment payable and ongoing lease cash payments are also paid. The lowest modeled cash is TWD7,954.499 million, above the reserve. This is a funding test for these scenarios, not assurance against an unmodeled factory outage or export restriction. Future cash generation receives no extra valuation credit.

Competitive risks and decision points

Four customers accounted for 88.62% of 2025 sales; the largest contributed 32.54%. A technically strong product can still have weak commercial bargaining power when a few buyers control qualification and volume. The original annual report also identifies material-supply concentration and a patent proceeding with an unquantifiable possible liability. Neither is solved by the TSMC relationship.

The most useful next evidence is not a generic increase in optical TAM. It is a disclosed process insertion, accepted paid wafer count, qualification yield, initial customer economics and evidence that the same tools can serve new products without sacrificing profitable CIS output. The October revenue release should first test

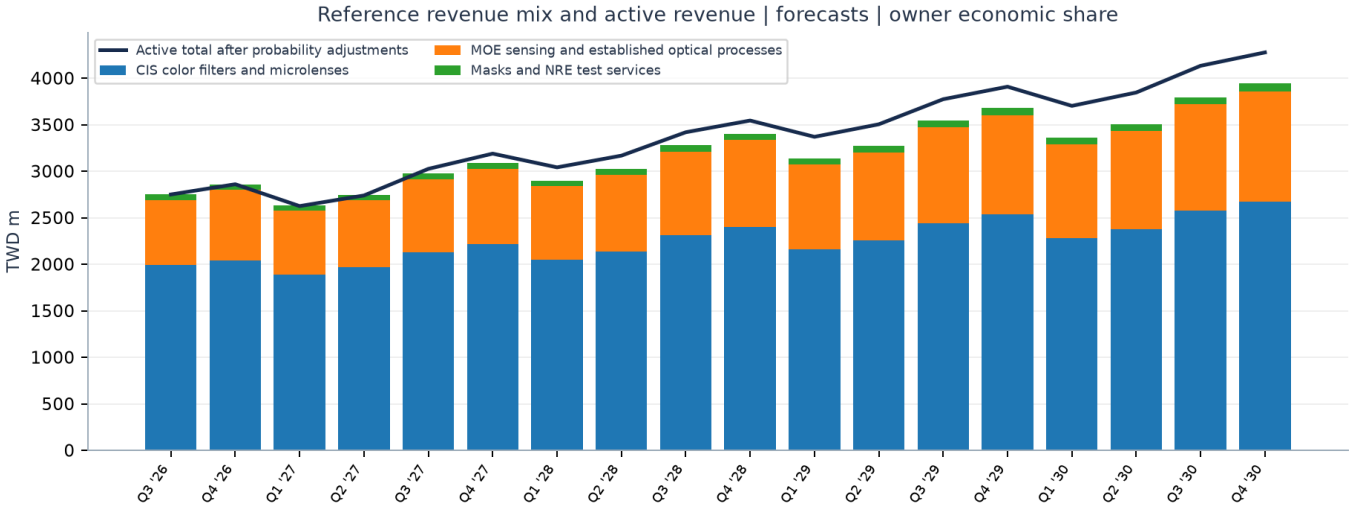

whether the strong July/August run rate continued. Later milestones are 1.6T process acceptance, H2 2027 high-density coupling and evidence that Longtan prepared space becomes qualified capacity.

Analytical Base is 39/60: Core14, Cycle7, TAM7, Catalysts4, Macro7, Alpha4 and Risk-4, rounded to 65/100. Process integration and a strong balance sheet support the thesis. Customer concentration, a still-small disclosed photonics wallet, incomplete public Q&A and uncontracted process-volume assumptions prevent a higher rating. The investment case improves when component-level commercial evidence narrows those gaps; a higher stock quotation alone does not do so.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	14	Wafer-level optics process and qualified integration offer value, but no monopoly or named CPO award.
Cycle	7	CIS and security recovery visible; consumer demand and MOE volatility remain.
TAM	7	Invoice-level optical wallet expands, with bounded capture rather than whole transceiver TAM.
Catalysts	4	September revenue,1.6T process acceptance, high-density coupling qualification and Longtan output.
Macro	7	AI connectivity tailwind offset by Taiwan/customer concentration and consumer exposure.
Alpha	4	Rental normalization, wafer-process scope and qualification economics differ from a simple CPO label.
Risk classes	-4	Customer concentration, Taiwan exposure, process ramp and uncertain award economics.
Total	39/60	Rounded Base 65. Both artifact and new workbook row use this score; this is not a manual override.

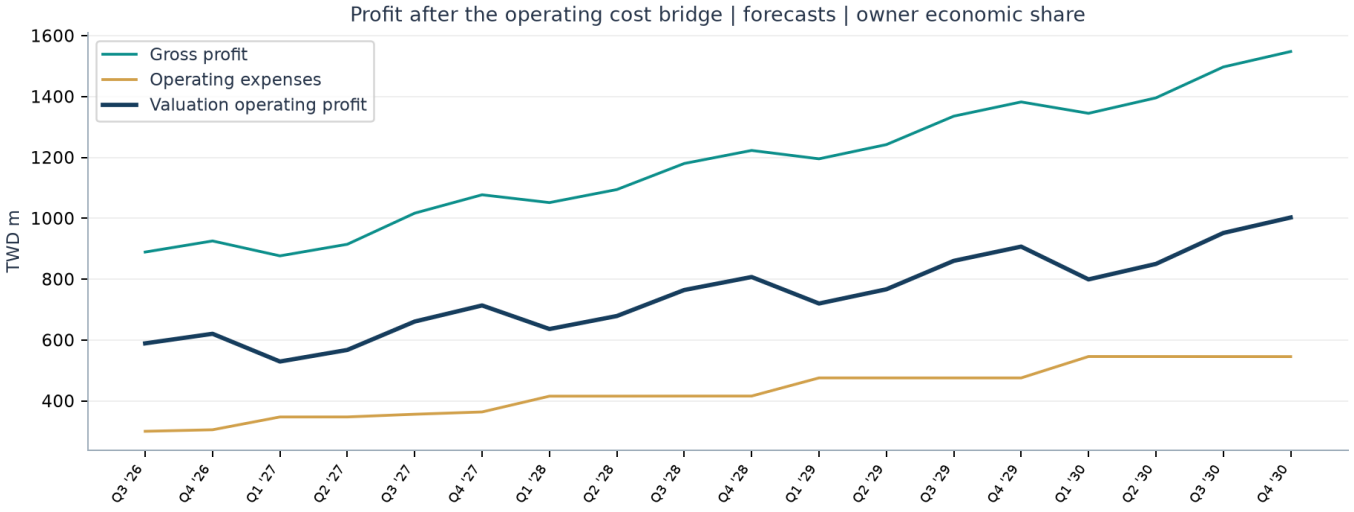

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	2,750.0	0.0	2,750.0

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	CIS color filters and microlenses	1,990.0	31.0%	616.9
Q3 2026	MOE sensing and established optical processes	700.0	35.0%	245.0

Q2 2029	392.1	101.1	-60.0
Q3 2029	392.1	101.1	-60.0
Q4 2029	392.1	101.1	-60.0
Q1 2030	427.4	107.2	-50.0
Q2 2030	427.4	107.2	-50.0
Q3 2030	427.4	107.2	-50.0
Q4 2030	427.4	107.2	-50.0

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

Claim decisions, overlap and triggers

SIPHO

p: 0.55

source: 2025 annual report pp1-2,61-68; August6 2026 management timing carried as attributed remark, full replay transcript unavailable

bounded: Conditional incremental paid 8-inch-equivalent optical process invoices: 6k/18k/30k/42k in CY2027/28/29/30, times TWD100,000 fee times50% remaining after reference overlap = TWD300m/900m/1500m/2100m. Fee bounded80k-120k; invoices bounded50-150% of selected path. Start H2 2027 at35/65% Q3/Q4.

bridge: 45% incremental GP including normal yield losses and depreciation;15% applications, qualification and R&D =30% OP. CY2027 weighted revenue165m and OP49.5m. Conditional capacity cash spend1.6bn in2027 and1.2bn2028; no additional capex-related EBITDA addback.

counter: Unknown named customer, insertion points and units; passive processing is not entire PIC/transceiver value. Design changes, low yield and other foundries can reduce capture.

overlap: 50% of gross candidate process wallet excluded to prevent counting established pluggable/MOE growth twice. CPO, FAU, PIC and Optical I/O labels are not four separate pools.

NANO_AR

p: 0.4

source: Official annual product roadmap and wafer-level capability

bounded: Beyond-reference nanoscale sensor/AR invoices of5k/13k/22k in2028/29/30 x100k fee x50% remaining =250m/650m/1100m conditional. No2027 acceleration from capability alone.

bridge: 43% GP less18% development/support =25% OP; 2028 weighted25m OP. Conditional capex400m2028,400m2029,300m2030 included in cash states.

counter: No disclosed production award, display-grade yield or end-customer demand. Nano imprint versus lithography and competing optics can substitute.

SECURITY_12IN

p: 0.6

source: Q2 application mix; July/August sales; annual factory/process strategy

bounded: 8% extra qualified security/high-end CIS invoices on50% eligible CIS sales, beyond baseline6-9% CIS growth:4% extra referenceCIS revenue2027/28,2%2029,1%2030.

bridge: 42% GP less10% variable operating support =32% OP;2027 weighted revenue196.8m, OP62.976m.

counter: Security Q2mix20% already in starting mix. 12-inch wafer area2.25x does not mean2.25x good invoices; design/yield/process-cycle constraints apply.

QUALIFIED_PRICE

p: 0.4

source: Cross-product high-end lithography and qualification burden; forward engineering inference

bounded: 25% eligible new/repriceable CIS invoices x3% premium (2-4% bound) x50% non-overlap =0.375% reference CIS sales2027/28; fades2029/30. Fixed backlog not repriced.

bridge: 80% gross retention less10% extra qualification/service =70% OP;2027 weighted incremental OP8.61m.

counter: No issuer evidence of an executed premium; customer concentration and8-to12-inch cost-down can transfer savings to customers. Explicit40% probability captures uncertainty, not a claim of pricing guidance.

CUSTOMER_CYCLE

p: 0.3

source: 2025 MOE sales decline36.1%;88.62% sales to four customers; local competition

bounded: 7% loss of referenceCIS+MOE sales2027 onward, excluding added optical invoice branches.

bridge: 40% lost GP offset5% saved operating cost =35% decremental OP.2027 weighted OP loss82.32m.

counter: Actual firm delivery schedules can outperform this risk; concentration can also produce sharper downside than the bounded case.

RENTAL_SCOPE

p: 1

decision: Separate declining net rental/facility income100/95mH226,75m/q2027,65m2028,60m2029,50m2030. No20x capitalization of interest/FX. Future rent renewals partly modeled, not guaranteed.

zero reason: No separate property asset add-on: rental profit is already capitalized. Net income includes property depreciation, staff and services. The 991.327m minimum future fixed rent schedule does not support blindly annualizing233.245mH1 gross rent forever.

Remaining bounded uncertainties

- Official August6 and February12 replay pages are archived, but full spoken Q&A transcripts could not be retrieved. Both full financial decks, prior performance report, current annual management letter and technical strategy are read; this does not satisfy a claim of complete call transcription.

- September2026 sales are not yet published at the October7 cutoff. Q3 forecast2750m implies September916.624m after official July/August1833.376m.

- No public named CPO customer, contracted wafer start, per-wafer ASP, die yield or accepted capacity; optical fee/invoice counts are model proxies.

- Rental minimum commitments are below current gross run rate; future service scope and renewals are unconfirmed. No property NAV double count.

- The optical wafer fee and mature CIS fee are not comparable scopes and must not be used to imply a whole-factory ASP.

- VisEra issued318.2991m shares includes existing0.630m unvested awards; add only0.205m unused authorization reserve and future model grants.

- TWSE direct quote endpoint certificate validation failed; dated public quote history supplies Oct6 TWD484.00.

- Litigation described in annual report cannot be reliably quantified; no fabricated damages reserve.

- China/Taiwan customer concentration and cross-strait disruption are not resolved by32 modeled operating outcomes.

65 | 采鈺科技 民國一百一十四年度年報

伍、營運概況 66

❸AI 資料中心：光互連（Optical Interconnect）將逐步取代電傳輸

大型語言模型（LLM）的訓練與推論導致算力需求暴增，傳統銅線傳輸面臨頻寬瓶頸與高功耗問題。以光訊號取代電訊號的 CPO（共同封裝光學）與矽光子技術，成為次世代資料中心的剛性需求。本公司利用微光學核心技術，開發適用於 CPO 封裝的 Light Coupling（光耦合）微透鏡陣列，以及針對 Micro-LED 光源的整光元件。本公司扮演光電訊號轉換介面的製造商，協助客戶解決光訊號與矽晶片之間的封裝對準與傳輸損耗難題。

❹擴增實境（AR）：顯示技術與光波導的微型化

AR 智慧眼鏡欲走向消費市場，必須突破「重量」與「顯示亮度」的物理限制。光機系統需極度微型化，且需依賴高效率的光波導技術將影像精準投射至人眼。本公司積極整合 AR 生態系，提供 SRG（表面浮雕光柵）光波導製程。結合上游玻璃晶圓與奈米壓印及高階 Litho (光刻) 技術，我們能製造出高視野角（FOV）、高透光率的波導片；同時在 Micro-LED/Micro-OLED 微顯示器上，提供色彩轉換與光束整形服務，是幫助 AR 裝置輕量化與商業化的重要推手。

綜觀上述趨勢，終端產品對「光」的依賴已從單純的影像拍攝，擴大延伸至 3D 感測、資料傳輸與全像顯示。本公司憑藉跨領域的光學製程平台，確保公司在電子產業技術快速發展的浪潮中，持續保有核心競爭優勢。

(4) 晶圓級光學代工產業競爭情形

本公司獨特經營模式：晶圓級光學代工廠（Optical Wafer Level Foundry），以 8 吋及 12 吋半導體製程為基礎，整合彩色濾光膜、微透鏡、光學薄膜及先進光學微結構技術，並延伸至晶圓級測試服務，為客戶提供差異化代工服務。

依照主要技術領域，產業競爭情形分析如下：

(a) 彩色濾光膜與微透鏡製程：堅守高階技術護城河

目前全球影像感測市場除少數 IDM 大廠（如 Sony、Samsung）採自製模式外，絕大多數 Fabless 設計公司皆依賴專業代工。近年受地緣政治影響，中國半導體國產化使當地廠商進行擴產。

本公司優勢： 彩色濾光膜與微透鏡製程屬於高技術門檻市場，目前小像素微透鏡技術 (<1.0um) 或搭載 NLP 技術 (Nano Light Pillars) 仍是中國供應鏈尚未完全突破的關鍵技術節點。面對市場競爭，本公司積極發展高階市場，專注於更精細的像素結構與極致的光學性能提升。憑藉領先的技術創新能力與穩定的高良率生產實績，我們持續穩固高階影像感測器代工市場，這是競爭對手短期內難以複製的優勢。

(b) 光學元件技術：多元佈局，建立技術屏障

本公司利用半導體製程優勢，開發出一系列具備高度競爭力的光學元件，涵蓋三大關鍵技術：

A. 光學薄膜整合技術（Optical Thin Film）：本公司是市場上少數能同時提供 8 吋及 12 吋光學薄膜整合至矽晶圓方案的供應商，具備將干涉式多層膜（Interference Multi-layers）與有機材料（Organic Type）濾光膜進行異質整合的能力，能提供極高均勻性與客製化光譜設計。此外，我們成功開發新一代金屬薄膜（Metallic Film）技術，減少模組厚度，契合終端裝置薄型化的市場需求。

B. 微型光學與超穎透鏡（Micro-optics & Meta-lens）：針對消費性電子極致輕薄與高感度的需求，本公司能同時掌握可見光與紅外光 Meta-lens 製程。

超穎透鏡（Meta-lens）： 利用奈米結構強化高效光線折射，提升光學精度，結構整合可縮減鏡頭厚度與重量。

奈米光柱（Nano Light Pillars）： 作為傳統微透鏡的替代方案，本公司開發的 Nano Light Pillars 技術，能透過光譜分光路由（Re-routing），在低光源環境下有效增加各波段光線的接收面積，顯著提升小像素感測器靈敏度（Sensitivity），為市場未來影像感測器畫質提升的主要技術。

C. 光通訊市場（Optical Communication）：本公司運用累積多年的微光學製程能力，佈局 AI 資料中心的光互連市場。我們將微透鏡與光學對準技術，轉化為光通訊所需的光耦合（Light Coupling）解決方案，協助客戶解決光訊號傳輸的挑戰，開創新的應用市場。

D. AR 光波導製程（SRG）：在擴增實境（AR）領域，表面浮雕光柵（SRG）光波導因具備輕薄與大視野角（FOV）優勢，被視為幫助 AR 眼鏡輕量化與薄型化的關鍵主流技術，亦是目前衍射式波導（Diffractive Waveguide）中具備量產實績的主要方案。本公司布局完整的製程，以覆蓋全市場需求：
