FRAMEWORK 8.0 / 2026-10-02

Furuya Metal

7826.T | Bottleneck / qualified specialty-material platform

PGM recycling / HDD targets / semiconductor process materials

A qualified precious-metal processing platform with established HDD/EUV demand, an underappreciated metal-realization gap versus guidance, and a longer-dated ruthenium interconnect option. The strongest near-term case is the existing business; the model does not capitalize all inventory as pure ruthenium or turn 2030 wiring into 2027 mass production.

ACTIVE CEILING	BASE SCORE	OP MULTIPLE	ACTIVE WINDOW
JPY 28,358 / share	77 / 100	20x	Q4 2027 - Q3 2028

20x forward-four-quarter consolidated operating profit / maximum modeled diluted shares in the same four-quarter window; no net-cash addition or net-debt deduction.

Status: Active research model. Model inputs, probabilities and scoring are analyst estimates. Financial units: JPY billions; share counts: millions.

Production artifact snapshot as of 2026-10-02: G:/My Drive/1amInvesting/Artifacts/7826T_FuruyaMetal_DeepDive.pdf

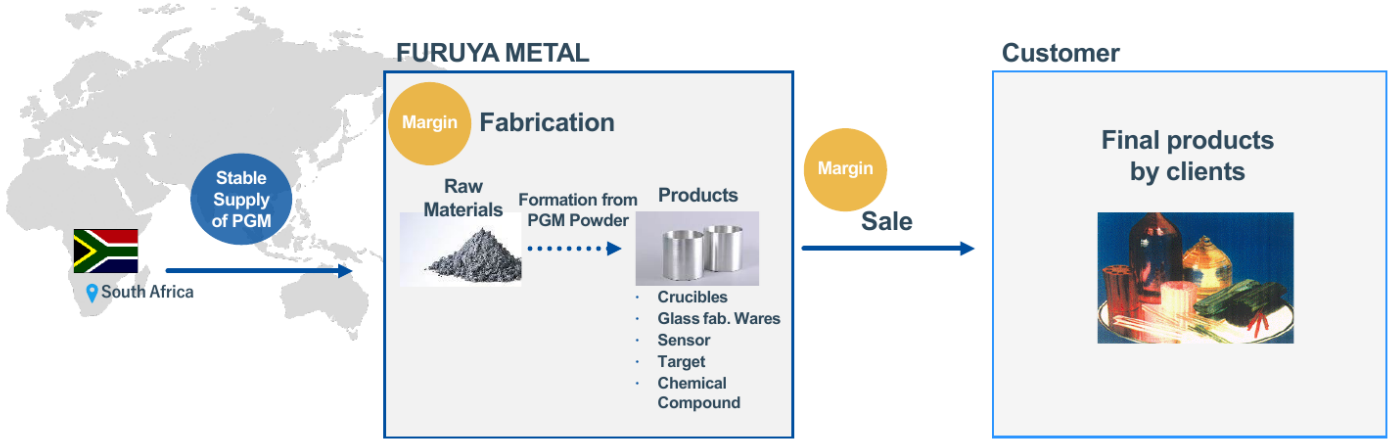

The investment case: processing scarce metals, not owning a pile of pure ruthenium

Furuya makes high-purity precious-metal products that are difficult to qualify and recover. Its thin-film targets serve HDD media and established semiconductor applications; iridium crucibles support medical scintillators and optical communications; thermal products serve semiconductor equipment. Chemicals, recycling and supply support broaden the business beyond AI.

The moat is the combination of chemistry, purity, custom fabrication, recovery and customer qualification. If Furuya disappeared, customers would face costly requalification and constrained near-term alternatives, but the entire architecture would not necessarily stop forever. Classification is a bottleneck and qualified materials platform, rather than a proven permanent monopoly.

Framework databases: DB6 storage/memory demand, DB1 optical infrastructure and DB10 advanced compute/process scaling are demand context. Ruthenium wiring is a later extension of process materials. The actionable sequence is existing HDD/EUV and metal realization first, thermal capacity second, and advanced interconnect pilots into approximately 2030.

Latest results and guidance provide a real operating anchor

FY June 2026 consolidated revenue was JPY 100.139 bn and operating profit JPY 24.794 bn. Segment profit in the release is GROSS profit: JPY 30.272 bn, before full SG&A of JPY 5.477 bn; the JPY 1 m arithmetic gap reflects source rounding. Calling segment profit operating profit would overstate the earnings base.

The strongest quality check is the final quarter: revenue JPY 25.409 bn and operating profit JPY 7.458 bn, despite no further extraordinary raw-inventory sales that quarter. This establishes operating momentum beyond the earlier inventory monetization. It does not establish that the entire Q4 margin or spot-metal spread is permanent.

FY June 2027 company guidance is JPY 101 bn revenue, JPY 33 bn gross profit and JPY 26.5 bn operating profit after JPY 6.5 bn SG&A. It assumes iridium USD6,000/oz, ruthenium USD1,400/oz and USD/JPY 155. The active model starts with those segment figures, then adds explicit weighted differences. CY Q3 2026 is FY2027 Q1 and is still unreported at this cut.

Source-control note: several English presentation headings and percentage labels are stale. The official consolidated release, section titles and raw amounts control. Margins are recomputed from raw amounts. No official current call transcript or Q&A was retrieved; no invented management quotation substitutes for it. The latest quarterly releases, annual securities report, presentation and strategy update provide the management evidence.

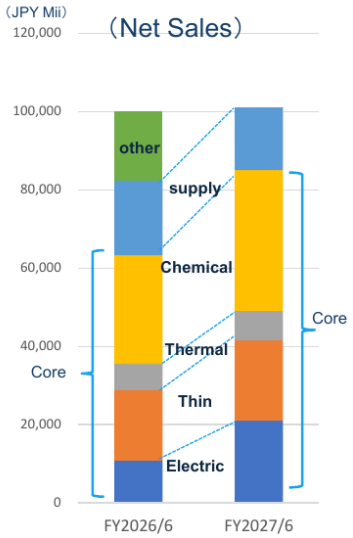

FY 2026 Financial Forecast

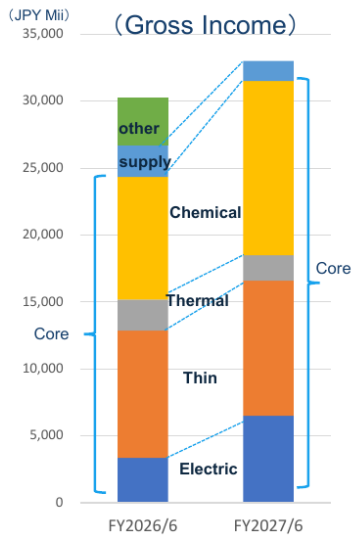

Key points of earnings forecast

- The core businesses (five pillars) are expected to continue performing strongly, and the Company expects to achieve **record-high net sales and profit for the second consecutive fiscal year.**
- Net sales are forecast at ¥101.0 billion, an increase of ¥0.8 billion year on year, and ordinary profit at ¥26.0 billion, an increase of ¥1.3 billion year on year.

(JPY Mii・%)	Result 2025/6		forecast 2026/6		
	amount	ratio	amount	ratio	YoY
Net Sales	100,139	–	101,000	—	+0.9%
Gross Income	30,272	30.2	33,000	32.7	+9.0%

Net Sales and Gross Profit Forecast for FY2027

Points by segment

- **Electronics**
  Revenue and profit are expected to increase, supported by continued strong performance of crucibles for medical equipment and optical cables.
- **Thin Film**
  Target materials for data center HDDs are expected to remain strong, while upfront costs are expected due to an increase in new shipments.
- **Thermal**
  Orders for genuine parts are strong, but depreciation expenses are expected to increase due to the start of operations at the New Chitose Plant.
- **Fine Chemicals and Recycling**
  Electrode catalysts, which had been on a recovery trend since the third quarter of the previous fiscal year, are expected to continue performing strongly.
- **Supply Chain Support**
  Planned based on the current outlook for demand.

F4 | Five-segment FY2027 guidance, issuer p 23. Guidance sums to JPY 101 bn revenue and JPY 33 bn GP. The model excludes a recurring Other inventory-sale business from this reference.

FY June 2027 guidance	Revenue JPY bn	Gross profit JPY bn	Derived GM
Electronics	21.00	6.50	31.0%
Thin film	20.50	10.10	49.3%
Thermal	7.50	1.90	25.3%
Chemicals / recycling	36.00	13.00	36.1%
Supply support	16.00	1.50	9.4%
Total	101.00	33.00	32.7%

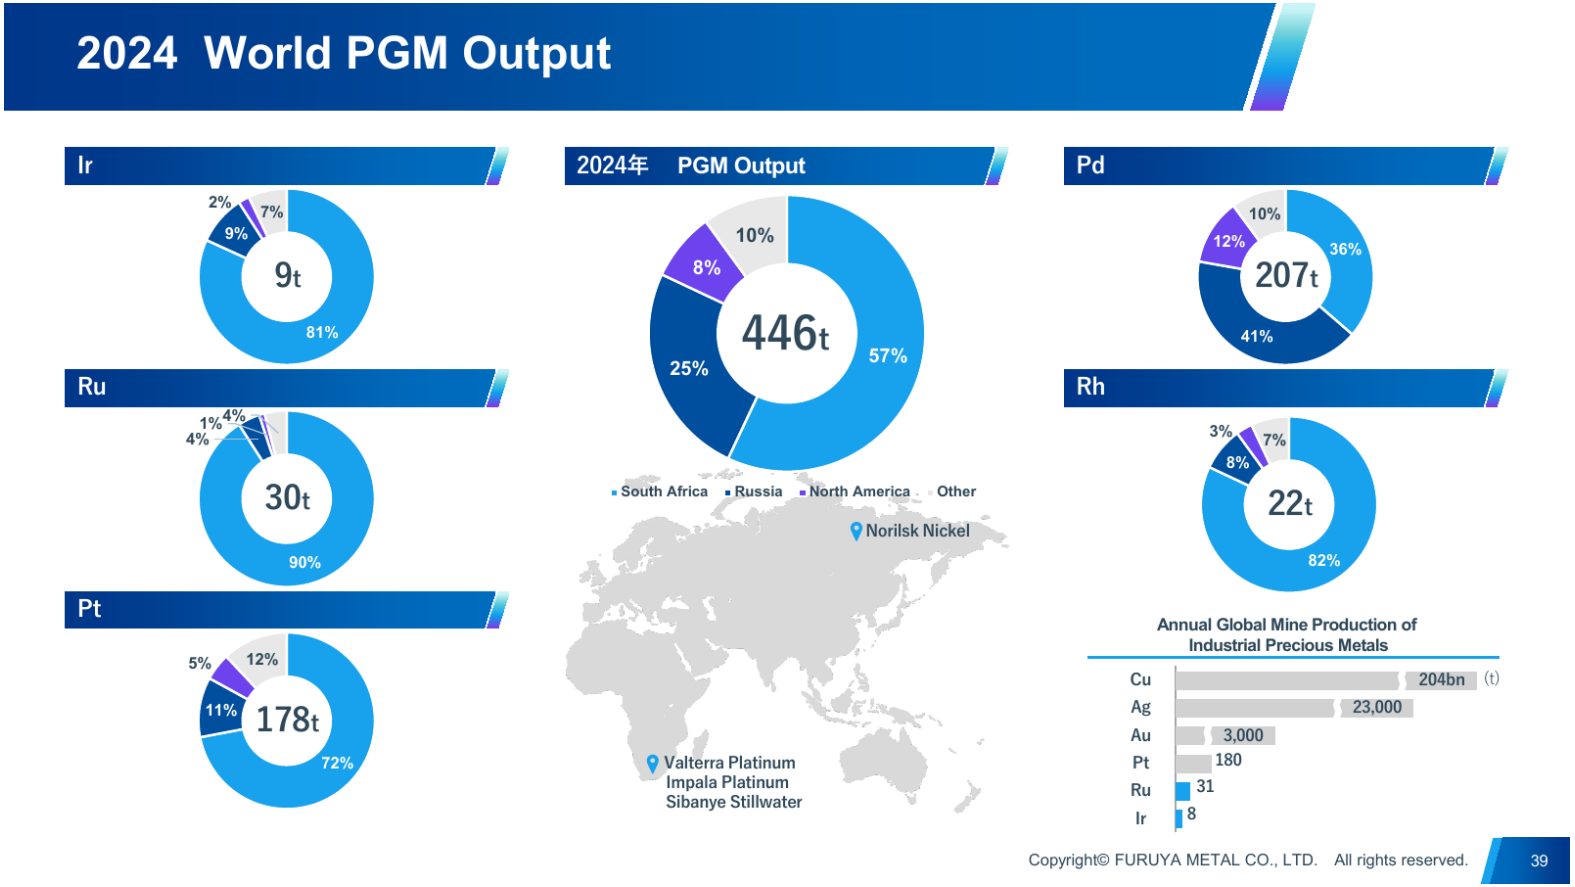

The metal-price gap is modelable; the whole inventory is not

Furuya's own October 2 reference dataset shows iridium USD8,100/oz and ruthenium USD1,700/oz. The arithmetic mean of 58 July-September observations is USD7,815.52 and USD1,636.90. These are issuer reference benchmarks, not reported realized selling prices. The social-source dealer quote near USD1,950 for Ru is a different benchmark.

The metal signal receives 65% probability on a defined economic outcome: bounded above-guidance prices pass into exposed sales and leave a positive spread after production and replacement costs. Conditional Ir 7,800/Ru 1,650, estimated metal-exposed revenue fractions and a realization lag are published in the probability ledger. The incremental GP capture narrows after FY2027 as replacement costs catch up. This is not 65% probability that today's benchmark exists.

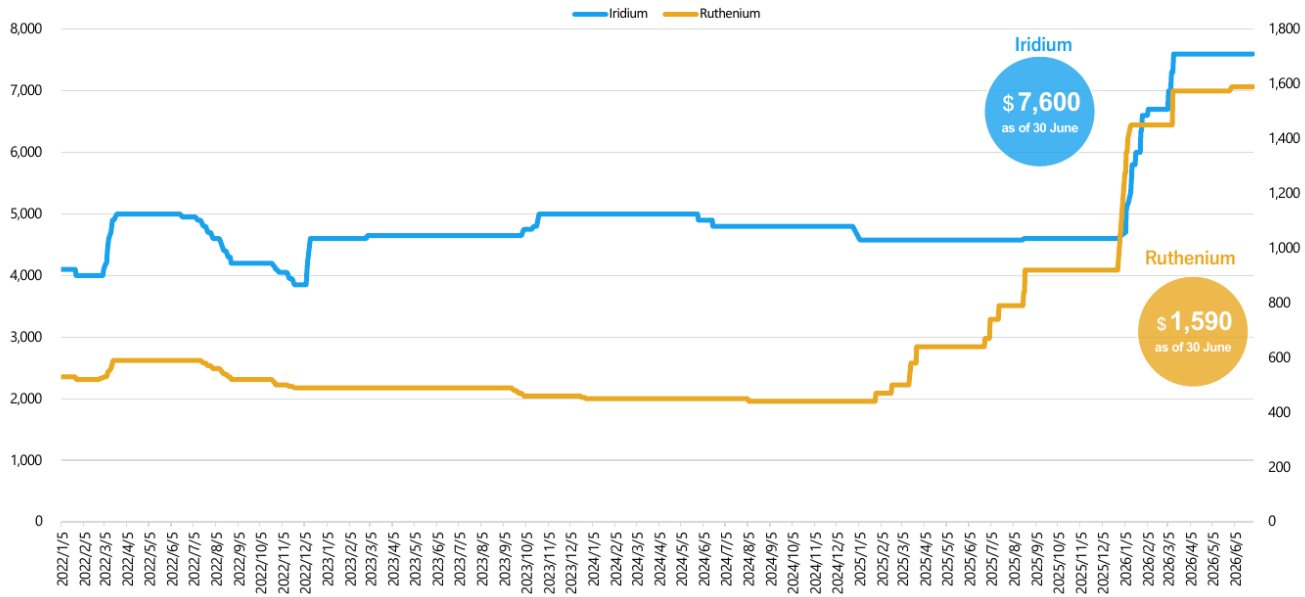

Raw materials and supplies were JPY 74.580 bn, 52.17% of assets. They include multiple metals and operating requirements. Total inventory was JPY 91.929 bn. Neither number is a disclosed quantity of uncommitted ruthenium. Inventory uses average historical cost with impairment when required; it is not marked upward to spot.

FY2026 extraordinary inventory revenue was JPY 16.558 bn with GP JPY 3.270 bn. A separate 25%-probability, smaller JPY 4.1395 bn conditional sale is confined to the first half of CY2027. It contributes nothing to the active Q4 2027 earnings window. No metal-asset value is added on top of the earnings ceiling.

F5 | Issuer estimate of 2024 mine supply and geographic concentration, p 39. Ru and Ir are by-products with concentrated primary supply; recycling throughput cannot be added as new mine output.

FMBI (Furuya Metal Bullion for Industry) Price

Copyright© FURUYA METAL CO., LTD. All rights reserved.

F6 | Issuer benchmark history through June 30, 2026, p 40. The October 2 benchmarks above come from the separate current FMBI dataset; this historical picture is not labeled current spot.

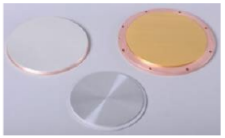

HDD and EUV growth now; interconnect wiring earns a smaller, later weight

Issuer-estimated niche positions include about 70% of HDD ruthenium targets, 70% of certain iridium crucibles, 70% of semiconductor-equipment thermocouples and 90% of OLED iridium compounds. These are scoped company estimates, without a current independently verified denominator. The HDD share is not a semiconductor-wiring share.

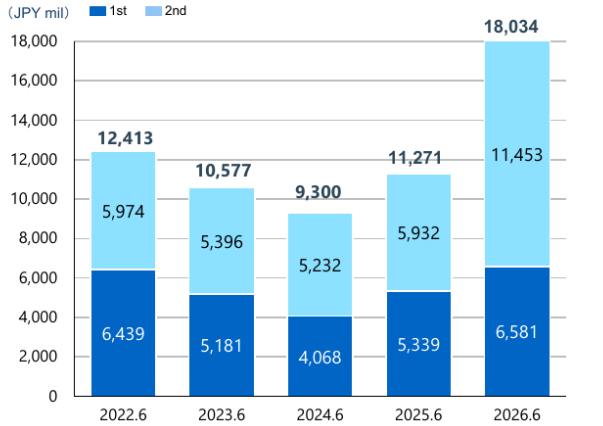

The near-term Thin Film volume hypothesis strips estimated metal inflation out of the Q4 revenue run rate before comparing it with FY2027 guidance. That avoids counting the same ruthenium price movement as both volume and ASP. The additional qualified-volume outcome receives 55% probability. Storage exabytes, media area, density, target utilization and recycled content can move differently.

The reference's later Thin Film growth of 18%, 18%, 14% and 12% reflects a moderating qualified-target demand proxy, not a sourced annual TAM series. Electronics grows 10%, 10%, 10%, then 8%; chemicals/recycling 12%, 12%, 10%, then 8%; supply support stays flat. These are transparent model continuations anchored to guidance, with lower reliability beyond 2028.

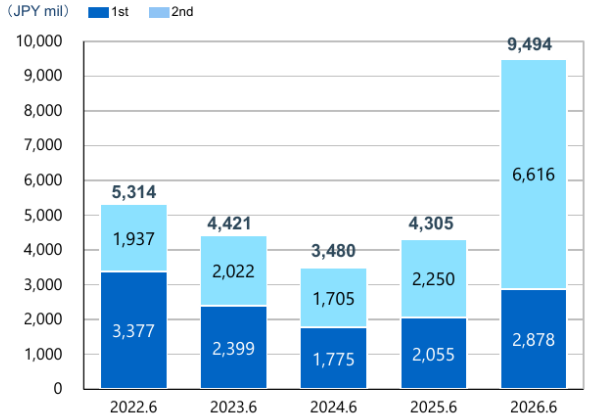

Issuer samples and imec/IBM research support a ruthenium interconnect route, while the issuer roadmap places broader opportunity around 2030. We use 30% probability on incremental pilots equal to 1%, 5%, 15% and 30% of the FY2027 Thin Film revenue anchor in FY2028-31. Dedicated qualification costs are charged. Copper, molybdenum and other integration choices remain real alternatives.

Main Products	Main uses	Factors of Fluctuations in Business Performance
■ Target Materials 	■ Thin film formation of HDD. ■ Target materials for semiconductors ■ Target materials for next-generation communications	■ Ru target materials for HDDs performed strongly. ■ Semiconductor target materials remained solid for EUV applications, while sample shipments for semiconductor wiring materials continued. ■ Shipments of target materials for next-generation communications also recovered.

Net Sales

Gross Profit

F7 | Thin-film applications and management's distinction between established HDD/EUV demand and new wiring samples, issuer p 10.

Growth Areas : Sputtering Targets for Semiconductors

Global supply of high-quality Ruthenium targets for cutting-edge semiconductors

Cutting-edge semiconductors

EUV lithography

Mask Blanks material

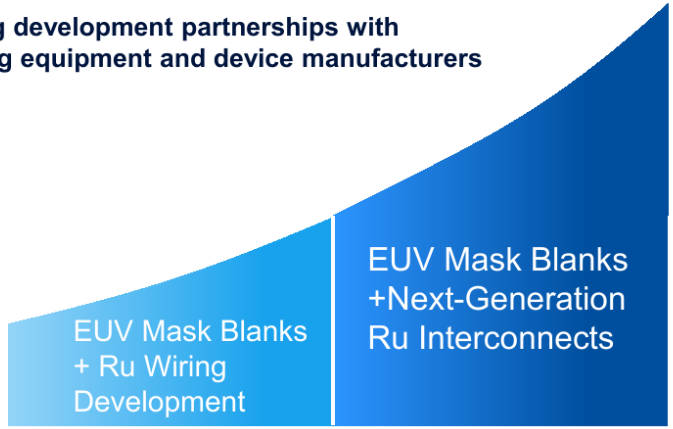

Low resistance wiring

Ruthenium wiring

Expanding production and R&D capacity

Strong development partnerships with leading equipment and device manufacturers

Copyright© FURUYA METAL CO., LTD. All rights reserved.

F8 | Issuer roadmap places the next ruthenium interconnect opportunity around 2030. The active model prices earlier pilot economics rather than assuming 2027 mass production.

Thermal capacity: a physical expansion with an initial cost penalty

New Chitose is a thermal-sensor and quartz facility. The September announcement describes about JPY 4.5 bn investment, capacity roughly twice the prior plant and full operations in spring 2027. The securities report lists a JPY 4.7 bn plan, approximately 1,700 additional new quartz units and 4,000 protection tubes annually, with specification dependence. The small capex scope/rounding difference is retained explicitly.

FY2027 guidance already includes the plant: Thermal revenue rises to JPY 7.5 bn while GP falls to JPY 1.9 bn as depreciation and ramp costs increase. No second FY2027 capacity uplift is added. The model gives 50% probability to faster utilization beyond the subsequent reference ramp, based on a clearly labeled 70% plant-addressable share of FY2026 Thermal revenue.

Tsukuba’s JPY 3.5 bn plan extends to June 2028 and supports several digital-product segments; Tsuchiura’s JPY 1.5 bn program improves metal recovery efficiency through June 2027. Neither disclosure supplies a clean incremental revenue-per-yen capacity rule. Those investments support the reference and capex reserve, not a separate unbounded revenue pool.

F9 | New Chitose facility, issuer September 15, 2026 [PLANT]. This is thermal/quartz expansion, not a doubling of Ru refining supply.

Growth Areas : Quartz Products and Thermocouples

New Chitose Plant will start full operation in 2027, commercializing new quartz products for semiconductor industry
Strengthening the global supply network for thermocouple products

Copyright© FURUYA METAL CO., LTD. All rights reserved.

F10 | Thermal products and Chitose roadmap, issuer p 30. Physical capacity still requires qualification, labor and utilization to become saleable output.

Demand calibration, cash and the long-range cross-check

A customer-by-customer capex wallet cannot be measured reliably from current public disclosures. The named FY2026 customer De Nora Permelec contributed JPY 10.384 bn, or about 10.4% of total sales; the chemicals/recycling business also serves industrial demand beyond AI. China including Hong Kong represented JPY 27.107 bn, about 27.1%. HDD/foundry customer allocations are not disclosed. A diversified capex total multiplied by an invented supplier share would overstate precision.

The Plan-B demand bridge therefore uses disclosed product revenue, latest target shipments, guided capacity and explicit physical/content proxies. FY2026 actual segment revenue reconstructs JPY 100.139 bn including a JPY 0.002 bn rounding residual; GP reconstructs JPY 30.272 bn. The FY2027 guided product bridge reconciles exactly. This is calibration of reported sales, not independent validation of the later demand growth assumptions.

Furuya reduced short-term bank debt to zero, but still had JPY 13.796 bn bank debt and JPY 0.467 bn leases against JPY 7.602 bn cash. Inventory dominates working capital. FY2026 operating cash flow was JPY 15.763 bn; cash capex was JPY 3.786 bn. The forecast separately shows capex, dividends and a turnover-based working-capital requirement. It is a planning bridge, not a forecast of distributable cash.

The original FY2030 JPY 150 bn sales / JPY 20 bn ordinary-profit plan is being revised; it is not the active earnings guidance. Our FY2030 revenue around JPY 150.5 bn is a convergence with that historical scale, not validation of our much higher operating-profit estimate. Ordinary profit and operating profit differ; a new management target, metal assumptions and the next quarterly results should test the path.

Balance Sheet

- Strategic inventory rebalancing was implemented. Although inventory at the end of June 2026 increased year on year, this was mainly due to higher market prices (FMBI average annual price: approximately +29% for iridium and approximately +147% for ruthenium).
- Short-term borrowings were repaid to reduce interest expenses, supported by improved cash flow.

F11 | Balance-sheet evidence, issuer p 19. Some comparison headers are stale; use June 30, 2026 figures and the audited release. Inventory is operating capital, not freely realizable pure metal.

Cash obligations: reserve the tax balance before treating cash as available

The planning cash table below is generated from operating profit, D&A, modeled working capital, cash tax on new earnings, capex and dividends. It does not automatically pay down pre-existing tax or debt balances. To avoid mistaking that table for freely deployable cash, this separate obligation sensitivity deducts the June income-tax payable from every projected ending balance.

A further deduction of current bank debt and current leases is shown as a conservative liquidity reserve, not an assumed same-day payment. Timing and refinancing can differ. The JPY 30 bn undrawn commitment facility is liquidity capacity, not cash or profit. No amount in this table changes the 20x operating-profit valuation.

Minimum across modeled quarters	JPY bn	Interpretation
Raw planning cash minimum	15.46	Before legacy tax/debt settlement
Less June tax payable	7.89	Separate old-period obligation
Minimum after tax reserve	7.58	Not a current balance-sheet claim
Less current bank debt and leases	4.66	Timing-neutral conservative reserve
Minimum after both reserves	2.91	Before other contingent obligations

Risks, cross-book read-throughs and precommitted tests

Risk class 1, one score point: metal-price reversals, replacement-cost catch-up and working-capital financing can turn nominal sales growth into weak cash generation. Test realized GP and cash conversion against the metal ledger; do not celebrate revenue alone.

Risk class 2, one score point: customer, geographic and qualification concentration. Large industrial customers, China demand and lengthy requalification matter. No named hyperscaler or foundry award is assumed for undisclosed relationships.

Risk class 3, one score point: capacity execution and technology substitution. Chitose can be underutilized; HDD density/recycling can reduce metal intensity; a different interconnect material can take the later opportunity. These are distinct ways the manufacturing/technology thesis can fail within the same risk class.

Cross-book: STX/WDC shipment growth can help target demand while a Ru shortage can hurt their input economics. Semiconductor materials demand can confirm wider process investment without granting Furuya a foundry allocation. De Nora and private precious-metal refiners are useful supply-chain screens, not new portfolio entries or certified monopolies.

The next scheduled earnings release is November 6, 2026, FY2027 Q1. Refresh segment sales/GP, metal realization, inventory and cash conversion first. Watch spring 2027 plant acceptance, revised FY2030 targets and evidence separating advanced-wiring pilot sales from existing EUV. The full ledger below specifies probability escalation and reduction tests. None requires waiting for certainty before carrying a weighted outcome.

Reported calibration and model bridge

Direct six-segment actuals plus explicit 0.002 bn rounding residual. Guide reconcilation:101 bn revenue,33 bn GP less 6.5 bn SG&A = 26.5 bn OP. Segment profit is gross profit, not OP.

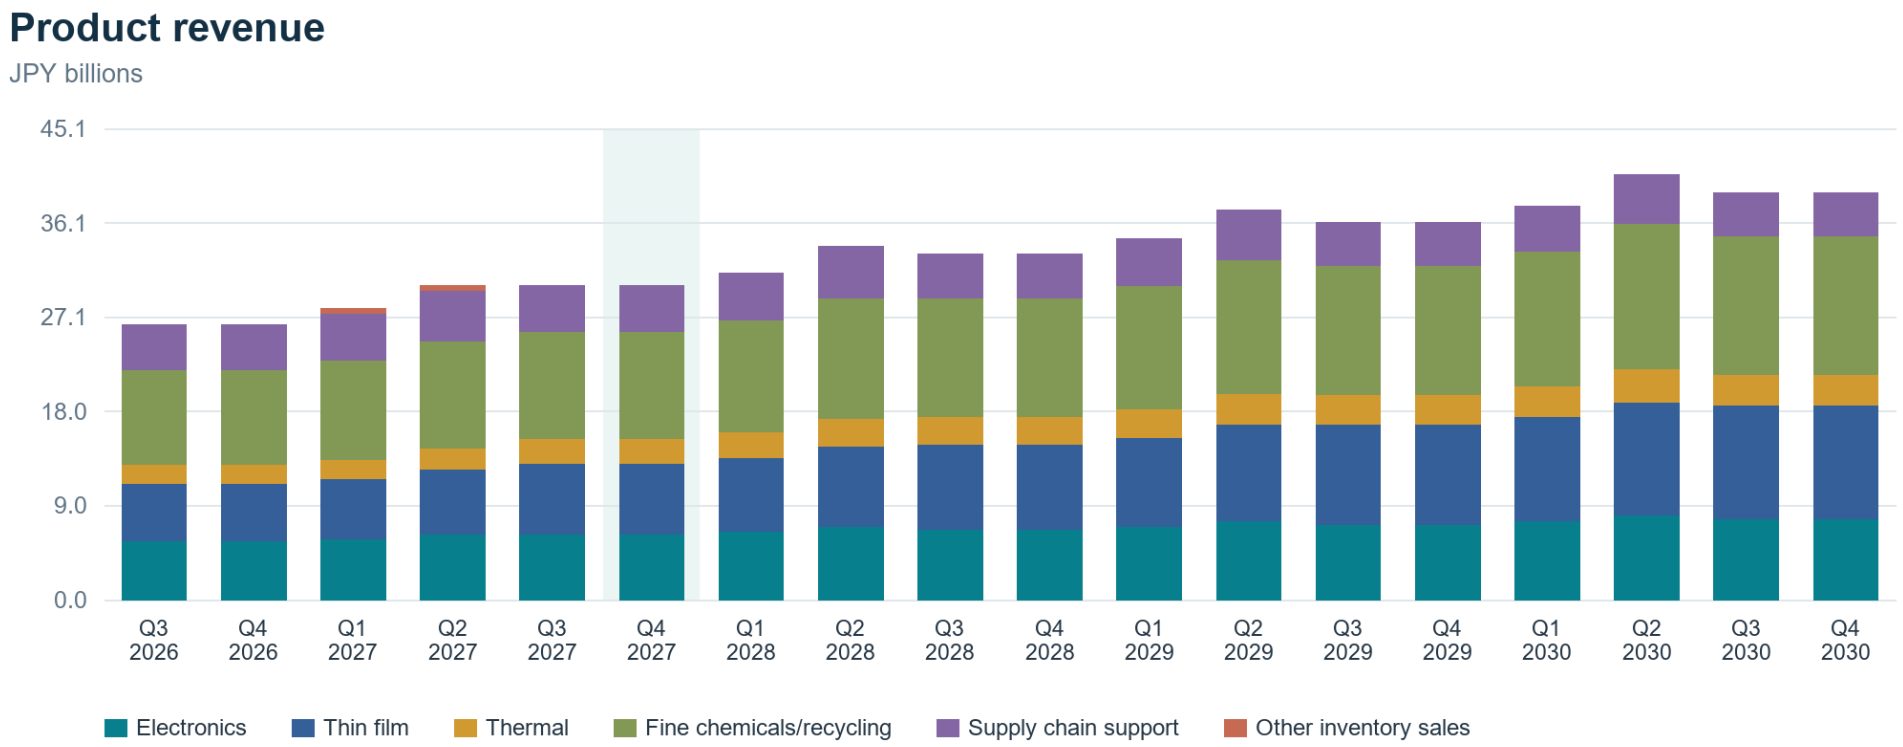

Metric	Reported	Reconstructed	Period

Operating cost includes fixed expense, the modeled variable expense share of revenue, and explicitly charged incremental expense. Product margins are model assumptions where the issuer does not report them.

Quarterly product gross profit: complete bridge

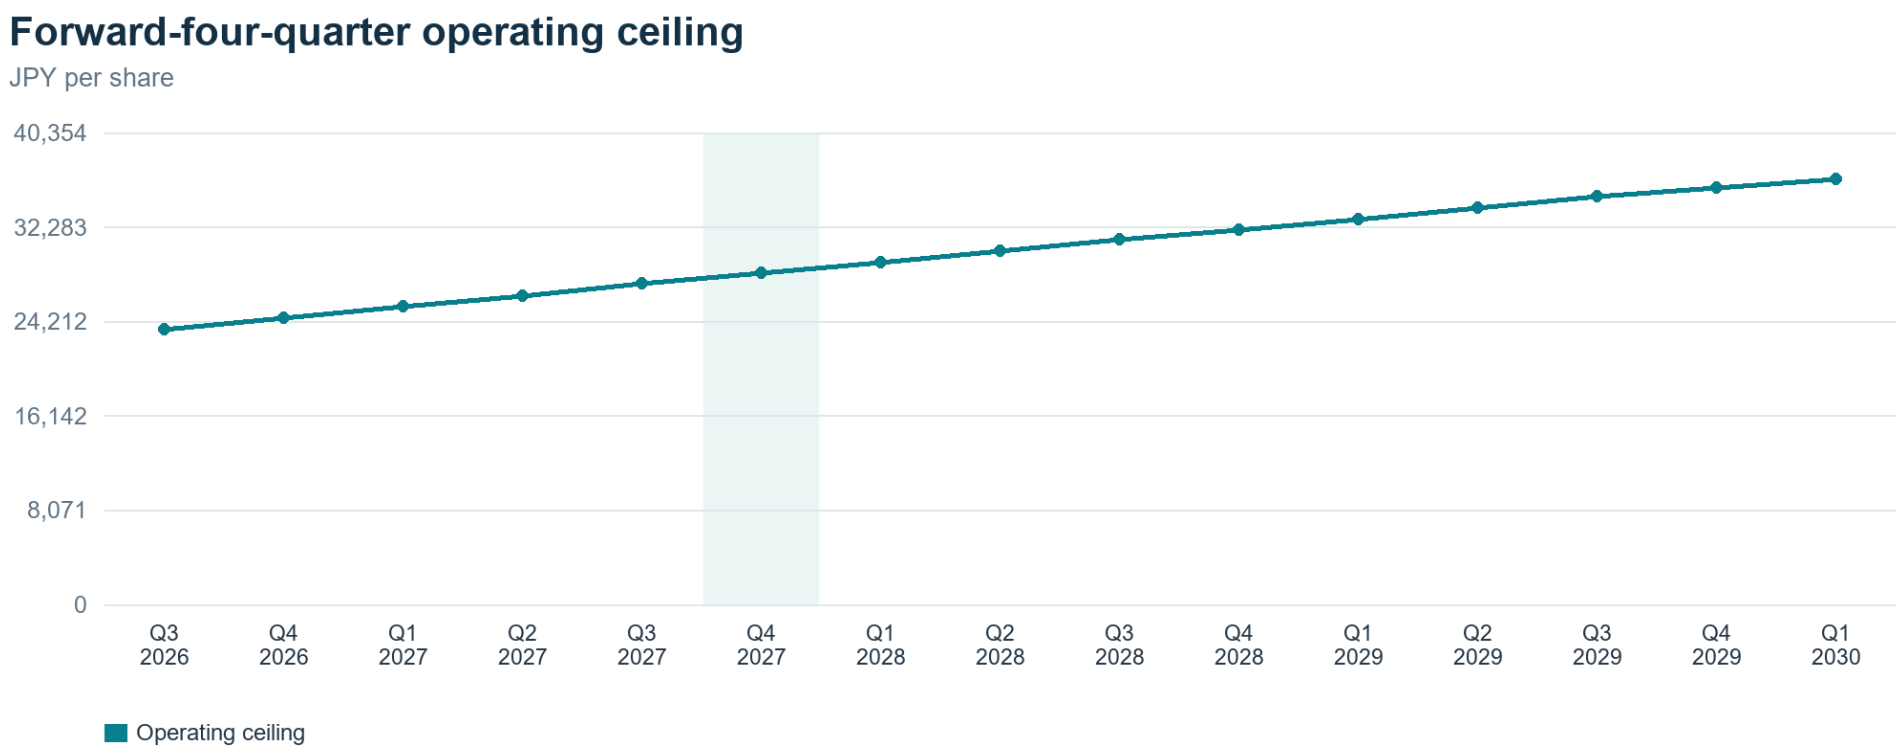

For each product and quarter: modeled GP = reference revenue x reference GM + sum of probability x conditional incremental GP. Consolidated GP is the sum of product GP. Operating profit = consolidated GP - fixed SG&A - variable SG&A rate x modeled revenue - probability-weighted dedicated operating expense.

June net outstanding 24.599305 m + reported dilutive-option increment 0.080 m; planned Oct 19 treasury disposal 0.0063 m from Q4 2026. Thereafter 0.020 m annual award allowance from FY28 (model reserve, not announced issuance). No 2026 split; July 1 2024 split was exactly 3-for-1. Maximum same-window projected diluted shares is used.

Operating drivers: source anchors and model inputs

Metal reference assumptions

USD per troy ounce

Source: analyst operating model, research cut 2026-10-02. USD per troy ounce.

Reference / period	Iridium USD/oz	Ruthenium USD/oz	Status
FY27 guide	6,000.00	1,400.00	Issuer guidance
Jul-Sep mean	7,815.52	1,636.90	58 daily observations; benchmark mean
Model conditional	7,800.00	1,650.00	Conditional model reference before probability
Oct 2 reference	8,100.00	1,700.00	Issuer benchmark, not realized selling price

Sources: issuer guidance [PRES pp 22-23] and issuer FMBI observations through October 2 [FMBI]. Benchmark prices are distinct from company realized ASP, revenue exposure and replacement cost. Conditional values are the frozen METAL ledger assumptions.

Annual reference assumptions before probability increments

The reference path is the starting scenario, before any probability-weighted ledger increment. These are full annual reference assumptions as supplied by the model; the final fiscal year may only be partly present in the 18-quarter operating schedule.

Reference product revenue - JPY billions

Product	FY June 2027	FY June 2028	FY June 2029	FY June 2030	FY June 2031
Electronics	21.000	23.100	25.410	27.951	30.187

Annual product totals and cost structure

Annual totals cover the quarters present in the 18-quarter model. A period marked fewer than four quarters is partial; it is not a full-year forecast.

Period / quarters	Electronics	Thin film	Thermal	Fine chemicals/recycling	Supply chain support	Other inventory sales	Revenue
FY June 2027 / 4	23.26	23.02	7.50	37.90	17.80	1.03	110.52
FY June 2028 / 4	26.03	28.32	9.82	42.83	18.12	0.00	125.10
FY June 2029 / 4	27.99	34.10	10.83	47.41	17.69	0.00	138.01
FY June 2030 / 4	30.08	39.97	11.68	51.53	17.27	0.00	150.52
FY June 2031 / 2	15.41	21.77	5.90	26.55	8.19	0.00	77.82

Period	Revenue	Gross profit	COGS	SG&A / opex	Operating profit	GM	OP margin
FY June 2027	110.52	35.77	74.75	6.74	29.03	32.4%	26.3%
FY June 2028	125.10	41.44	83.66	7.51	33.94	33.1%	27.1%
FY June 2029	138.01	46.80	91.21	8.20	38.60	33.9%	28.0%
FY June 2030	150.52	52.06	98.46	8.89	43.17	34.6%	28.7%
FY June 2031	77.82	27.16	50.66	4.59	22.57	34.9%	29.0%

Product assumption provenance

Product	Source / model basis	Confidence
Electronics	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split
Thin film	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split
Thermal	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split
Fine chemicals/recycling	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split
Supply chain support	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split
Other inventory sales	FY2027 issuer segment guide (PRES p 23); future volume and price proxies explicitly modeled	HIGH guidance / MEDIUM volume extrapolation / LOW incremental metal split

Probability ledger: conditional outcomes

Each probability applies once to the specified incremental outcome above its reference path. These are analyst judgments, not issuer guidance. Positive and negative interactions remain governed by each stated overlap rule.

ID / outcome	Probability	Active-window incremental revenue	Active-window incremental OP
METAL - Benchmark realization above guidance	65.0%	8.688	1.385
HDD_EUV - Qualified target volumes exceed the guided trajectory	55.0%	2.964	1.260
THERMAL - Higher utilization of doubled Chitose capacity	50.0%	0.735	0.276
RU_WIRING - New ruthenium wiring pilots convert into incremental material sales	30.0%	0.121	0.048
INVENTORY - A smaller repeat strategic inventory monetization	25.0%	0.000	0.000

Active window: Q4 2027 - Q3 2028. Units: JPY billions. Incremental OP includes variable operating expense and any dedicated incremental expense.

METAL | Benchmark realization above guidance

Assigned probability: 65.0% | 2026-10-02 research cut

Evidence

FMBI daily observations through October 2; FY27 guide Ir 6000/Ru 1400.

Reference path

The six product reference paths below; FY27 five-segment issuer guide, no separate Other.

Conditional outcome

Conditional metal references Ir 7800/Ru 1650, below October spot and close to completed Jul-Sep averages. Segment exposed revenue fractions: Electronics 65% Ir; Thin film 50% Ru; Chemicals 40% half Ir/half Ru; Supply 85% half/half. FY27 timing realization 85%, then 100/80/60/50% through FY31. Incremental GP captures 35/40/25/12% respectively initially, narrowing thereafter as replacement costs rise.

Probability rationale

65% that the bounded above-guide realized price/margin outcome persists across reset lags; observed benchmarks support it, but actual contract exposure and average-cost response are unknown.

Overlap control

Guidance already includes much higher prices than FY25. Only the difference from its metal benchmarks is added; no inventory mark-up or second Ru premium.

Revision trigger

Increase to 75% if FY27 Q1/Q2 disclose sustained above-guide sales/GP attributable to realization; reduce to 35% if benchmarks revert to guide or pass-through consumes the spread.

Probability-weighted quarterly effect

Quarter	Incremental revenue	Incremental GP	Incremental OP

Q4 2030	1.367	0.196	0.162

HDD_EUV | Qualified target volumes exceed the guided trajectory

Assigned probability: 55.0% | 2026-10-02 research cut

Evidence

Thin Film Q4 revenue 6.183 bn, current HDD/EUV demand; PRES pp 10-11,23.

Reference path

The six product reference paths below; FY27 five-segment issuer guide, no separate Other.

Conditional outcome

FY27 conditional physical increment = Q4 run-rate normalized from Ru 1580 to guide 1400 at 50% metal exposure, minus 20.5 bn guide. Later extra volumes equal 20/25/30/30% of reference Thin Film revenue in FY28/29/30/31; incremental GP 45%, with full variable SG&A charged.

Probability rationale

55% on additional qualified target volume, anchored in issuer demand and Q4 deliveries; exabyte growth is not equated to metal mass.

Overlap control

The FY27 observed run-rate is stripped of modeled metal inflation first. Reference already grows 18/18/14/12% after FY27. Additional high-volume outcome is not the entire HDD or AI TAM.

Revision trigger

Raise if normalized target revenue sustains above guide and HDD/EUV mix is disclosed; reduce to 30% on weaker media orders, increased storage density reducing target intensity, or share loss.

Probability-weighted quarterly effect

Q4 2030	1.443	0.649	0.613

THERMAL | Higher utilization of doubled Chitose capacity

Assigned probability: 50.0% | 2026-10-02 research cut

Evidence

Sep 15 plant announcement; annual report p 30; guide already includes startup depreciation.

Reference path

The six product reference paths below; FY27 five-segment issuer guide, no separate Other.

Conditional outcome

Treat 70% of FY26 Thermal 6.688 bn as plant-addressable (assumption). Double that portion; utilization 90/95/100/100% from FY28; nonplant 30% grows 10/20/30/40% vs FY26. Only endpoint above reference is incremental. No FY27 increment. Incremental GP 40%, full variable SG&A charged.

Probability rationale

50% on the extra utilization outcome; physical plant is real, but 70% mix share and ASP-equivalent capacity are estimates.

Overlap control

Reference FY27 guide 7.5 bn and FY28-31 core ramp already include the plant. The residual is only faster saleable utilization above that path.

Revision trigger

Increase after spring 2027 qualification and utilization; lower to 25% on delay, labor bottlenecks or poor yields. This is thermal capacity, not precious-metal recycling.

Probability-weighted quarterly effect

RU_WIRING | New ruthenium wiring pilots convert into incremental material sales

Assigned probability: 30.0% | 2026-10-02 research cut

Evidence

Issuer samples/around 2030 roadmap; imec June 2025 and IBM February 2026 research.

Reference path

The six product reference paths below; FY27 five-segment issuer guide, no separate Other.

Conditional outcome

Increment above existing samples equals 1/5/15/30% of FY27 Thin Film 20.5 bn in FY28/29/30/31; zero FY27. Conditional GP 50%; dedicated qualification/R&D 8% of incremental sales plus general variable SG&A.

Probability rationale

30% on specified pilot/early-ramp scale: credible development path, but no foundry award, deposition wallet or process volume.

Overlap control

Existing EUV and sample sales remain in Thin Film reference. This is incremental interconnect work only;70% HDD-target share is not assumed for semiconductors.

Revision trigger

Raise on process/customer qualification and recurring pilot orders; reduce to 15% on roadmap slippage beyond 2030, molybdenum adoption, or consumable intensity below proxy.

INVENTORY | A smaller repeat strategic inventory monetization

Assigned probability: 25.0% | 2026-10-02 research cut

Evidence

FY26 inventory sales 16.558 bn with GP 3.270 bn; none in Q4. Inventory-efficiency strategy continues.

Reference path

The six product reference paths below; FY27 five-segment issuer guide, no separate Other.

Conditional outcome

Conditional sale equals 25% of FY26 inventory-sale revenue = 4.1395 bn, recognized half in CY Q1 and half in Q2 2027. Use historical GP 19.7488%. No recurring sale after FY27 and no terminal multiple on inventory asset itself.

Probability rationale

25% that management executes a further smaller sale in FY27; liquidity option is plausible, not announced revenue or unrestricted Ru inventory.

Overlap control

Guide five segments sum 101 bn with no Other. One event only; shares/metal benchmark increase do not separately revalue inventory.

Revision trigger

Remove on explicit no-sale policy or committed operating inventory; update to actual when volume, carrying cost and sale terms emerge.

Planning cash bridge: first ten quarters

June cash 7.602 bn; bank debt 13.796 bn, leases 0.467 bn; gross inventory 91.929 bn. Cash bridge uses operating NWC (receivables+inventory-payables)65.595 bn; future 57% of annualized quarterly revenue as a turnover proxy. It excludes 8 bn-class income-tax-payable catch-up, financing/paydowns and guarantees; the raw bridge overstates freely deployable cash when those obligations settle. Show a separate 7.888 bn tax-payable cash reserve sensitivity. Capex 3/3.5/3 bn annual is a model allocation, not the 30 bn growth envelope (which also includes R&D/M&A). Cash is not added to valuation.

Quarter	Opening cash	OP	D&A	Interest	Cash tax	NWC change	CFO

Planning identities: CFO = OP + D&A - interest - cash tax - change in operating NWC. Ending cash = opening cash + CFO - capex - dividend. Financing and other items are included only when explicitly described in the supplied model. Units: JPY billions.

Framework score: complete summing table

Dimension	Awarded	Maximum	Scoring rationale
Core thesis	17	20	Qualified Ru/Ir fabrication and closed-loop recovery; high issuer-estimated niche shares, but customers have alternatives and the whole group is not a monopoly.
Cycle stage	8	10	HDD, optics and existing EUV demand are in ramp; advanced wiring is later and less certain.
TAM expansion	8	10	Core targets/recycling expand first; thermal utilization next; wiring earns a 30% incremental probability, not full maturity credit.
Catalysts	4	5	November 6 FY27 Q1, next quarterly results, spring 2027 Chitose and FY2030 target revision.
Macro	8	10	AI storage and difficult-to-expand PGM supply; not all electronics revenue is AI.
Alpha	4	5	Japanese disclosures, guide metal benchmarks and inventory-sale normalization are more useful than raw Ru-spot extrapolation.
Risks	-3	0	-1 metal/working-capital economics; -1 customer/qualification/concentration; -1 capacity/technology execution and substitution.
Total points	46	60	Base = round(total points / 60 x 100)
Base score	77	100	Risk deductions are included in the total.
