AAON Inc.

AAON | Nasdaq | 2026-10-07

Q4 2027 model ceiling: USD 126.44

Analytical Base 42/60 = 70 | Watchlist / temporal manufacturing bottleneck

20x rolling forward-four-quarter fully expensed GAAP operating profit less conservative gross revolver funding reserve and net consolidated NMTC claims, divided by end-window economic shares. Quarter plus next three; no excess cash credit.

Coverage initiated at the owner's request. No holding was established by this research. Existing portfolio Base overrides remain protected.

All operating values are in USD m and shares in millions unless stated otherwise. Forecasts are analytical assumptions; issuer guidance and actual results are identified separately.

Writing-date snapshot: USD 88.07 per share (2026-10-06 close); 82.454 million common shares (2026-08-06); estimated equity capitalization USD 7,261.7 million. 10-Q cover common shares; historical market quote. Modeled option/PSU dilution is separate. This dated common-share snapshot is separate from forecast diluted shares.

Decision in the model

Active horizon	Earnings window	F4Q OP	Multiple	Diluted shares	Ceiling
Q4 2027	Q4 2027 through Q3 2028	575.2	20x	86.659	126.44

The ceiling is a model valuation, not a guaranteed trading price or a literal net-income P/E. Operating branches are weighted once. Where debt, preferred claims, conversion or equity floors make value nonlinear, the model values each coherent operating and funding state first, then weights those common-share outcomes.

Economic scope and matching claims

Consolidated external revenue and GAAP operating costs including Memphis overhead, ordinary depreciation, amortization, SBC and profit sharing. Operating leases remain fully expensed and are not also capitalized as debt.. 20x rolling forward-four-quarter fully expensed GAAP operating profit less conservative gross revolver funding reserve and net consolidated NMTC claims, divided by end-window economic shares. Quarter plus next three; no excess cash credit.

Financial claims and diluted shares follow the company-specific schedule below. Debt, preferred and minority claims are counted once. All financial model tables use USD m unless a different unit is stated.

The thesis: factory execution determines the value of a cooling franchise

AAON is a growing supplier of engineered cooling equipment with a valuable capacity window, rather than a monopoly on removing data-center heat. BASX combines custom thermal design, customer qualification, manufacturing and field support. The traditional AAON brand supplies commercial HVAC equipment and parts. The opportunity is to convert a large project pipeline into repeatable, profitable output while recovering the cost of rapid expansion. The counterpoint is equally concrete: sales can surge while gross margins and cash conversion disappoint.

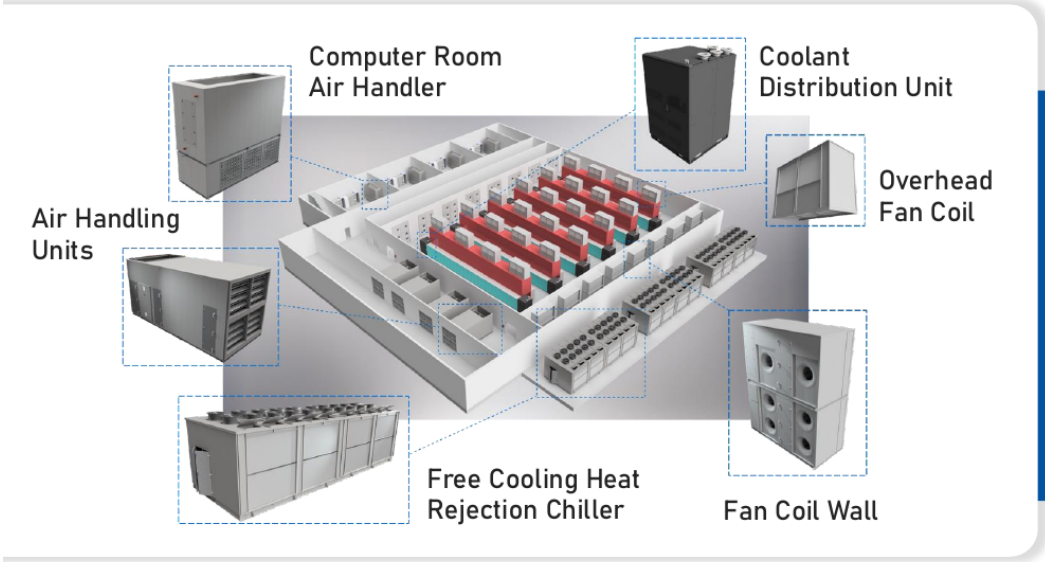

The active model uses 20 times forward-four-quarter fully expensed GAAP operating profit, less an explicit financing reserve, divided by end-window economic shares. The Q4 2027 ceiling is **USD126.44**, using Q4 2027 through Q3 2028 earnings. This is a model output, not company guidance. The analytical score is **42/60, or 70%, Watchlist**. The growth and engineering case earns substantial credit; customer concentration, operational execution, competition and financing each deduct one risk point. No holding is inferred from research coverage.

Understand the product before assigning the market

The thermal chain begins at components and ends at the outdoor environment. A coolant distribution unit controls flow and exchanges heat between loops; it does not by itself dispose of all facility heat. Air handlers remove heat from the remaining air-cooled equipment and occupied spaces. Heat-rejection chillers connect the facility's thermal loop to ambient conditions. BASX offers several of these elements, together with custom airside systems and cleanroom products. Owning several adjacent products broadens the wallet, but they remain parts of one installation rather than independent data centers.

Warmer liquid cooling can reduce mechanical refrigeration hours without eliminating heat rejection. Actual equipment selection depends on water temperatures, flow, ambient conditions, redundancy, filtration, controls and service requirements. AAON's custom approach can be attractive where a standard catalog system does not meet these constraints. It also creates engineering and commissioning burdens: a new design is not automatically an easy high-margin repeat unit.

BASX product offerings provide end-to-end solution for data centers

BASX

opportunity is

~$1.0B - $1.5B

per GW[1]

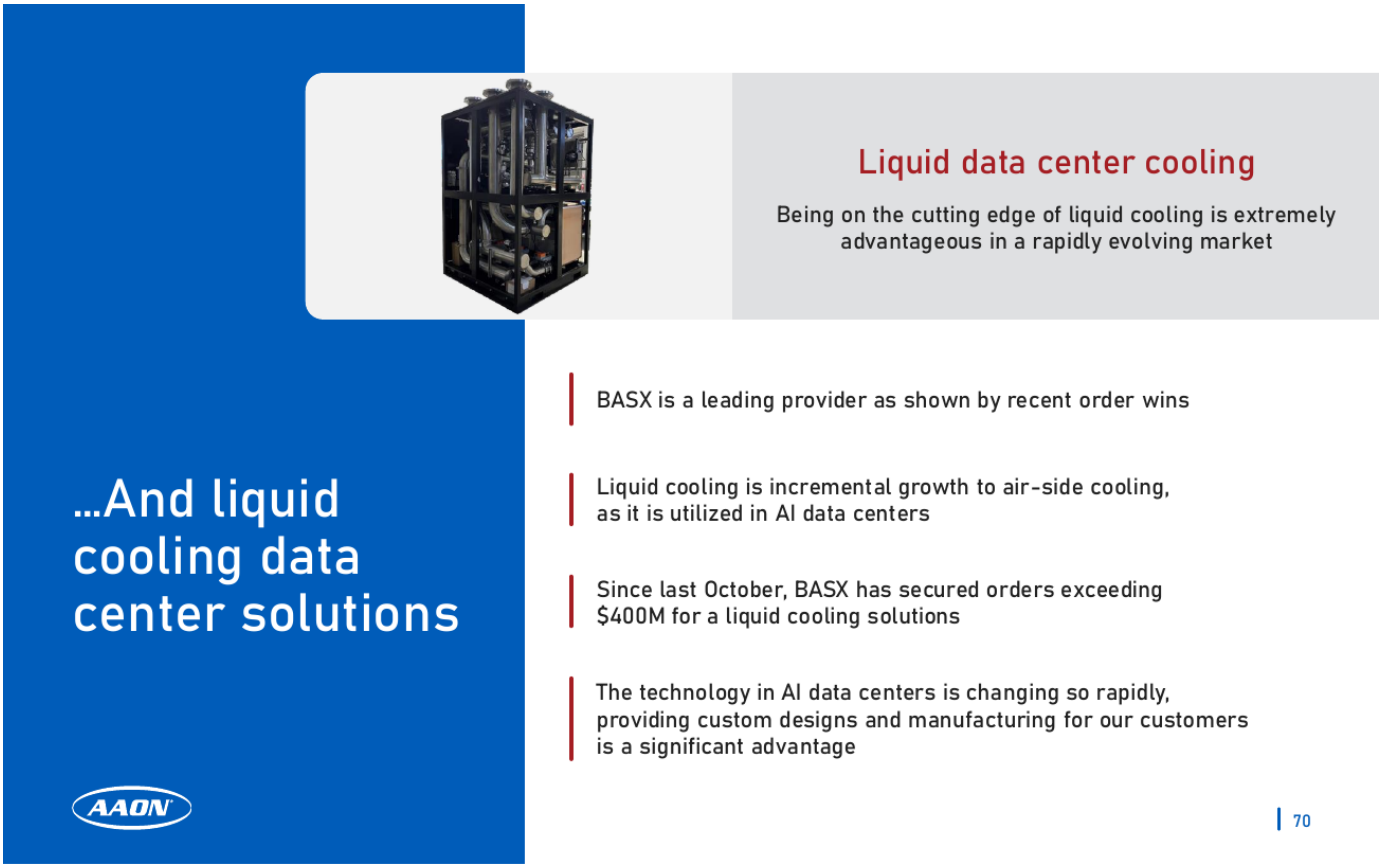

AAON

[1] Note: Opportunity is based on full utilization of manufacturing square footage described on slide 74

68

Original AAON 2025 Investor Day presentation, page 68. Earlier capacity estimates are dated context, not current guidance.

The issuer's older liquid-cooling illustration explains the product opportunity. Neither this rack image nor a data-center growth forecast establishes AAON's ASP, order share or recognized units. The model therefore uses a clearly labeled dollar-invoice proxy where product-unit disclosures are absent. Original investor presentation.

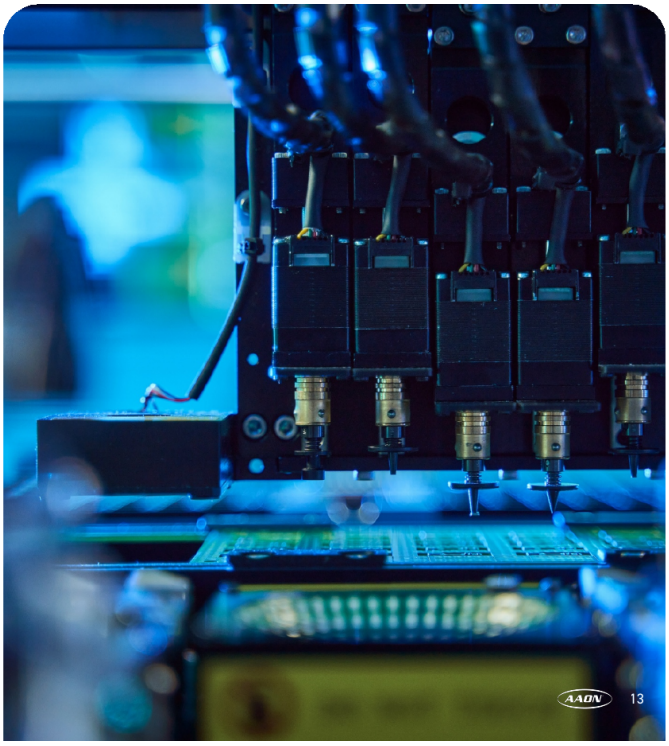

Original AAON 2025 Investor Day presentation, page 70. Earlier capacity estimates are dated context, not current guidance.

The latest quarter is the accounting anchor

For Q2 2026, consolidated external revenue was USD626.976m, gross profit USD152.491m, SG&A USD83.607m and GAAP operating profit USD68.884m. Q1 revenue was USD496.936m and operating profit USD57.059m. The first-half totals, rather than a stale run-rate, anchor the 2026 build. Management raised full-year sales growth to 55-60%, while reducing gross-margin guidance to 25-26%; SG&A guidance is 13-14% and D&A USD95-100m. Growth has been faster than cost recovery. August earnings presentation.pdf).

2026 Outlook

	Current FY26 Outlook	Prior FY26 Outlook
YoY Sales Growth	55%-60%	40%-45%
Gross Margin	25%-26%	27%-28%
SG&A % of Sales	13%-14%	14%-15%
D&A Expenses	$95M-$100M	$95M-$100M

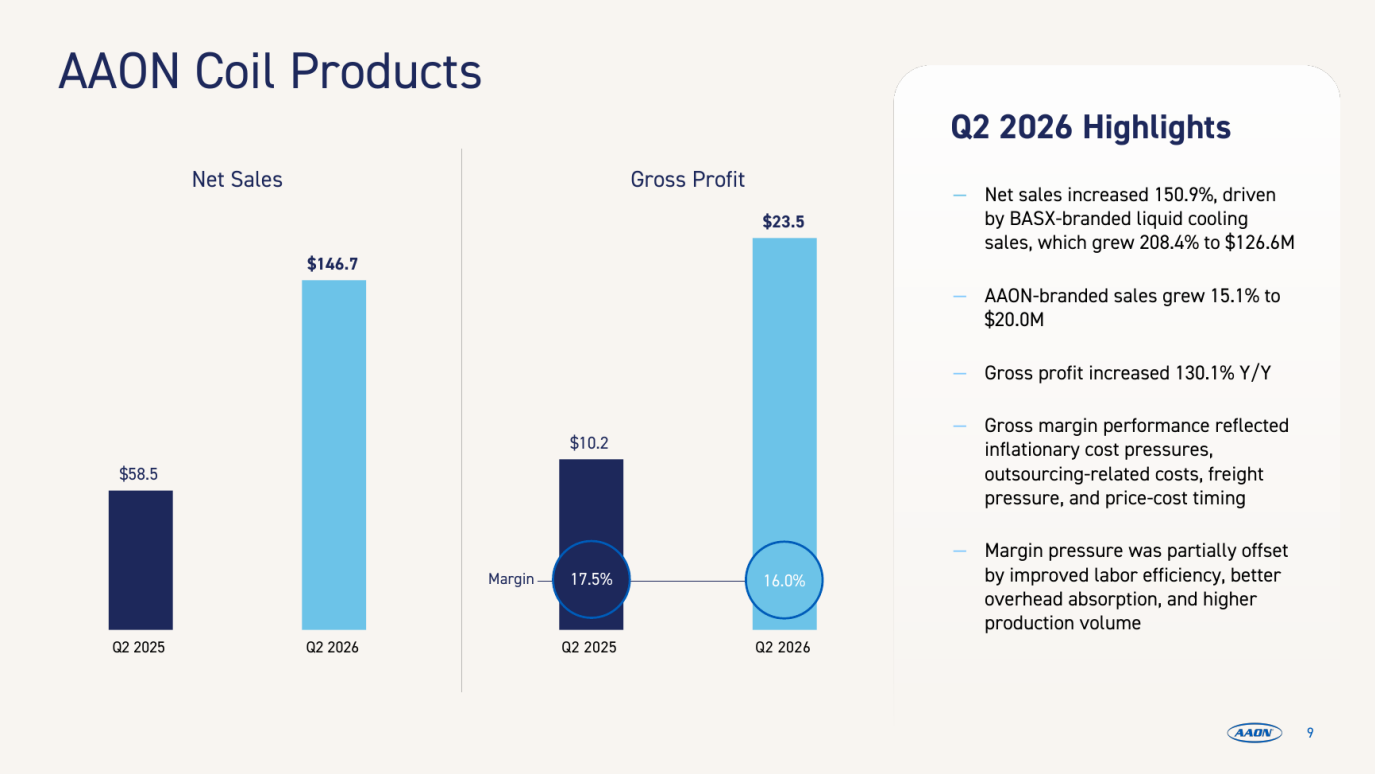

Original AAON August 10, 2026 earnings presentation, page 13. Earlier capacity estimates are dated context, not current guidance.

The model lands at the sales midpoint: USD2,271.270m in 2026, 25.5% gross margin, 13.5% SG&A and USD97.5m D&A. That produces USD272.552m fully expensed operating profit. The two modeled remaining quarters have equal sales, with more of the margin improvement in Q4, consistent with the latest management discussion. The second-half brand mix is a model allocation: a literal combination of the overall midpoint and approximately 20% AAON-brand growth implies modestly lower BASX quarterly revenue than Q2. The call's separate description of BASX as relatively flat is approximate, not a second exact numerical guide.

Both the May and August prepared remarks and Q&A were read in public transcript republications. Official filings and slides control wherever transcription is garbled. The May discussion emphasized accelerated production, outsourcing and a capacity opportunity above the older USD1.5bn estimate. August emphasized meaningful price recovery late in 2026, greater 2027 benefit and pipeline discussions for 2027-28 deliveries. It did not issue a 2027 revenue commitment. The older 32-35% 2027 gross-margin ambition is useful context, not a requirement that a current forecast reproduce it.

Brands and segments cannot be added together

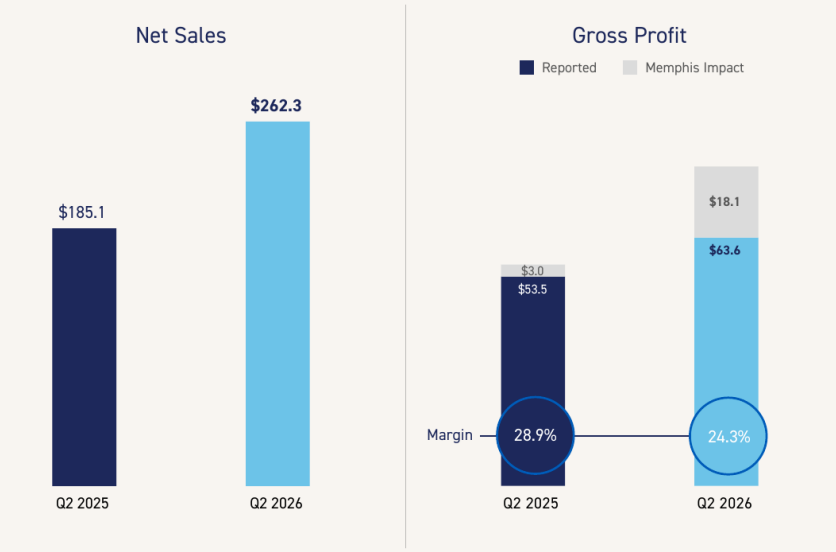

In Q2, the AAON Oklahoma segment reported USD262.276m external revenue, Coil Products USD146.680m and BASX USD218.020m. BASX-branded revenue was USD344.770m because USD126.643m of BASX liquid-cooling products was manufactured inside Coil Products, with a further small amount inside Oklahoma. Counting the BASX brand plus the BASX segment would duplicate sales. The model uses four non-overlapping vectors: Oklahoma, traditional Coil Products, BASX liquid cooling within Coil Products, and the BASX segment's other custom systems. June 10-Q revenue note.

Original AAON August 10, 2026 earnings presentation, page 9. Earlier capacity estimates are dated context, not current guidance.

The expense allocation is just as important. Oklahoma's reported gross profit includes USD18.1m of Memphis overhead in Q2. The issuer's approximately 31.2% Oklahoma margin excluding this burden describes the established operation, not the whole company's profitability. This analysis charges the burden exactly once. Future Oklahoma core gross margins are modeled separately and then reduced by USD58m of annual Memphis overhead in 2027, declining only gradually thereafter. BASX margins are not also burdened by the same expense. The accounting location does not make Memphis costs disappear.

AAON Oklahoma

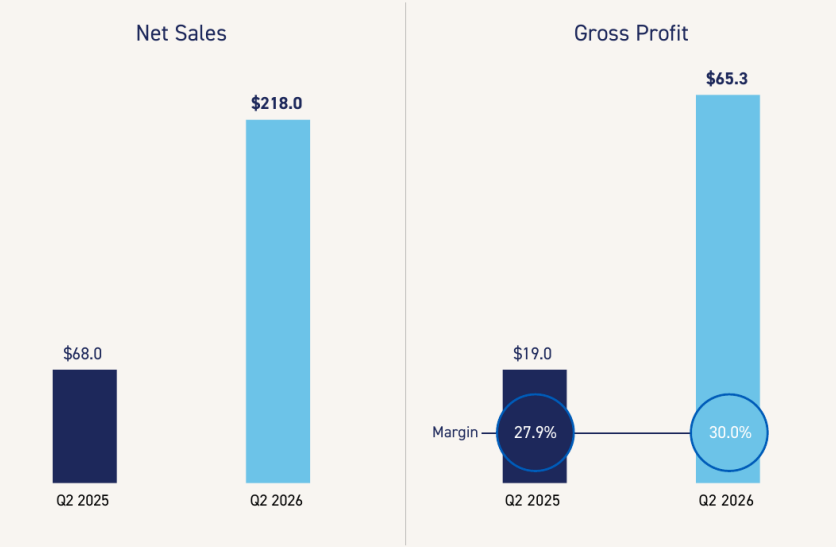

Q2 2026 Highlights

- Net sales increased 41.7% Y/Y
- Gross profit increased 18.9% Y/Y despite $18.1 million of unabsorbed costs at Memphis plant in 2Q26 compared to $3.0 million in 2Q25
- Unabsorbed Memphis costs resulted in 690 bps of margin pressure in 2Q26 vs. 160 bps of pressure in 2Q25; net of Memphis impact, gross margin expanded approximately 70 bps
- There is a clear path back to mid-to-high 30s gross margin (ex. Memphis costs) as outsourcing normalizes and price-cost flows through
- AAON-branded equipment backlog increased sequentially despite strong production throughput, and as such we will continue to ramp production through year-end
- Orders of AAON equipment remained strong, implying the AAON brand continues to gain market share in a soft market environment

AAON 8

Original AAON August 10, 2026 earnings presentation, page 8. Earlier capacity estimates are dated context, not current guidance.

BASX

Q2 2026 Highlights

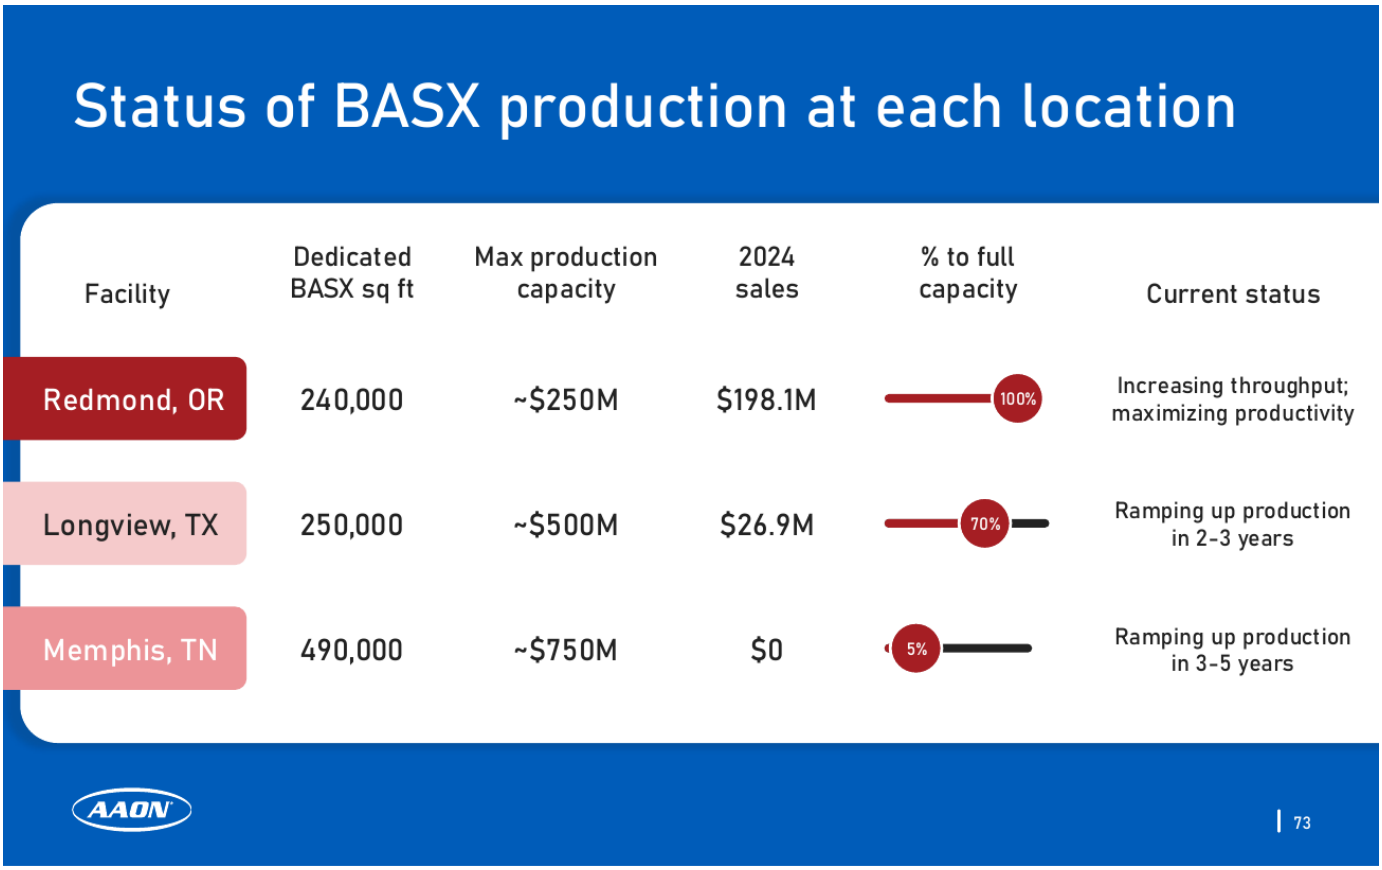

- Net sales growth of 220.7% driven by strong demand from data center market
- Continued progress with Memphis plant ramp-up was a meaningful contributor to growth
- Gross profit increased 244.2% Y/Y
- Y/Y margin improvement driven by strong volume growth, partially offset by incremental fixed costs and additional resources needed temporarily to support robust growth

AAON 10

Original AAON August 10, 2026 earnings presentation, page 10. Earlier capacity estimates are dated context, not current guidance.

Qualified throughput, rather than square footage, is the constraint

The 2025 site map showed approximately USD1.5bn combined BASX capacity across Redmond, Longview and Memphis. In the May 2026 discussion management indicated that product mix, further equipment and existing facilities could support more than USD2bn. This is potential capacity, not reported sellable output or guaranteed orders. The earlier site's start dates and utilization estimates must not be treated as current facts.

Original AAON 2025 Investor Day presentation, page 73. Earlier capacity estimates are dated context, not current guidance.

Memphis offers meaningful expansion space, but coils, metal fabrication, welding, test capability, trained staff and purchased components still determine output. Management identifies internal fan production and alternative sourcing as advantages, while acknowledging continued outside fan purchases. Vertical integration reduces one exposure; it does not prove immunity from motors, controls, compressors or material shortages. These statements support a temporal manufacturing advantage and a bounded pricing branch, not an industry-wide sole-source claim.

Original AAON 2025 Investor Day presentation, page 75. Earlier capacity estimates are dated context, not current guidance.

The reference BASX-brand forecast is USD1.70bn in 2027, USD2.12bn in 2028, USD2.44bn in 2029 and USD2.80bn in 2030. Future factory investment is therefore retained in the cash bridge. These amounts reflect a staged continuation of current production plus future order conversion; they are not a mechanical application of the industry's capex growth rate. The positive incremental program endpoint takes 2027 BASX to USD1.88bn before other effects. Later endpoints need equipment and productivity beyond the original capacity map and remain lower-confidence forecasts.

Orders are evidence, not cash or recognition

June backlog was USD1.971bn: USD1.430bn BASX and USD540.465m AAON. BASX backlog declined 11.7% from March while sales accelerated. The company attributes the change to conversion and lumpy large awards, and denies that one particular delayed order explains the quarter. The annual filing nevertheless makes clear that data-center orders can be rescheduled, cancelled and reissued. Backlog is therefore neither annual revenue nor risk-free financing.

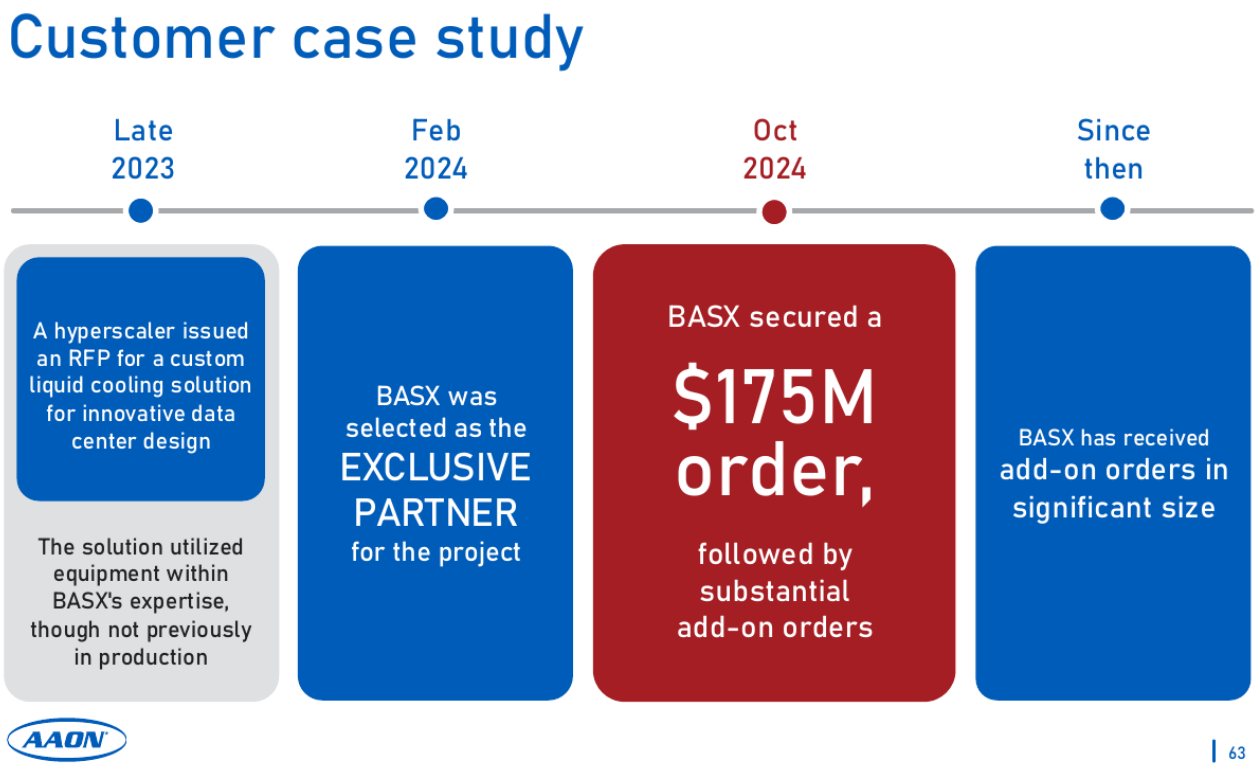

Backlog by Brands

	Backlog			
BASX SOLUTIONS	$1.43B	+185.4% Y/Y	-11.7% Q/Q	– Demand for data center air-side and liquid cooling solutions is robust – Large scale projects can create quarter-to-quarter bookings variability
AAON	$0.54B	+9.4% Y/Y	+6.0% Q/Q	– Focused on turning over backlog with higher production throughput – Strong bookings continued in Q2
Total Backlog	**$1.97B**	+98.0% Y/Y	-7.4% Q/Q	– Strong backlog allows us to plan production more efficiently – Anticipate continued growth and margin improvement throughout 2026

Original AAON August 10, 2026 earnings presentation, page 12. Earlier capacity estimates are dated context, not current guidance.

The historical USD175m hyperscaler project demonstrates the ability to win a custom design and obtain follow-on business. Exclusivity was specific to that project. It does not identify the customer or make BASX exclusive across the hyperscaler's thermal estate. The historical award and later liquid orders already support the reference ramp, so they receive no additional revenue layer. Applied Digital's supplier references similarly establish relevance rather than a new undisclosed contract value.

Original AAON 2025 Investor Day presentation, page 63. Earlier capacity estimates are dated context, not current guidance.

Probability-weighted economics are in the active forecast

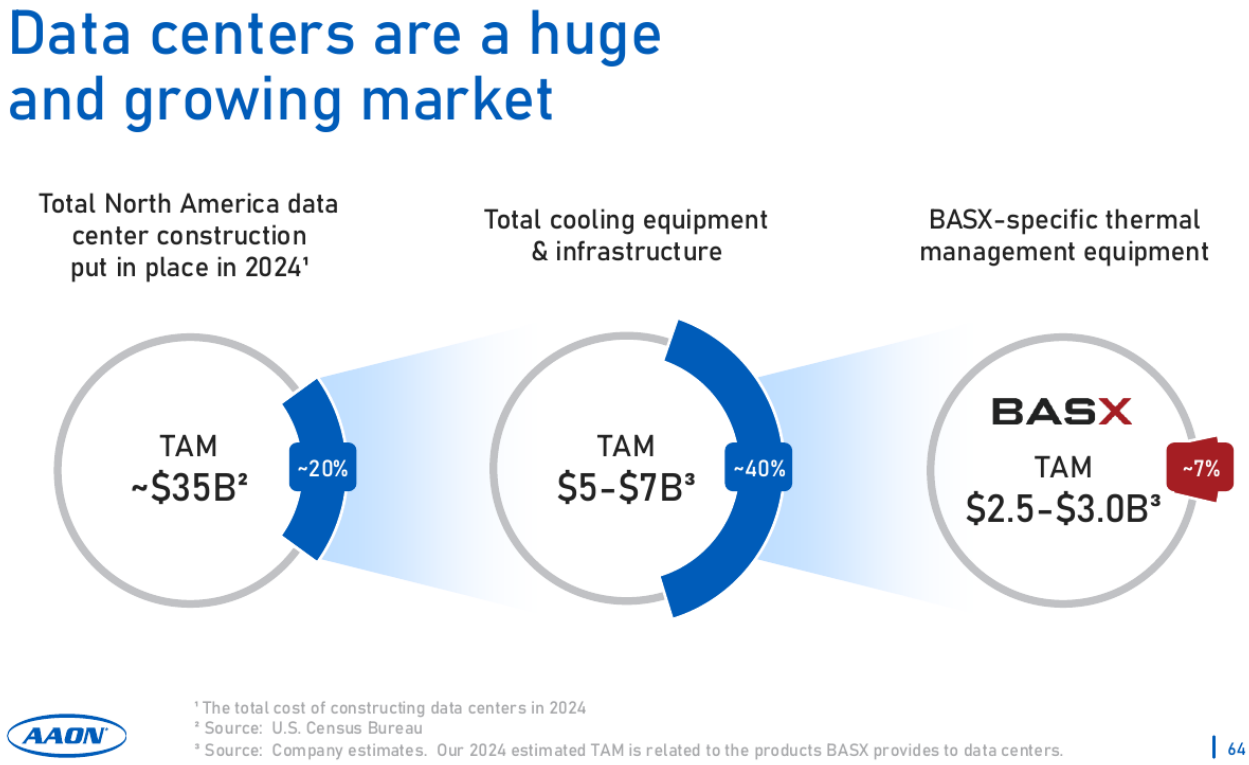

A 55% subjective probability applies to additional qualified programs beyond the reference. The 2027 conditional increment is USD180m, bounded by USD100-250m. It is derived from 144 incremental USD1.25m invoice equivalents, after excluding half of an illustrative USD360m opportunity already captured by the reference. USD1.25m is a modeling denominator for diverse equipment invoices, not a disclosed system price. At 30% incremental gross margin and 10% incremental operating expense, this adds USD19.8m weighted 2027 OP. The cost allowance covers engineering, sales, support and profit sharing; extra capex is also funded.

A separate 55% pricing hypothesis applies a 3% premium to 25% of reference BASX revenue that could be newly priced, then removes 50% for overlap with the ordinary recovery already modeled. After costs, this contributes USD2.454m weighted 2027 OP. It excludes fixed-price orders and the incremental program branch. The premium is not treated as all-profit revenue, and the already announced pricing actions are not counted twice.

The model also charges a 35% probability of a further 120-basis-point BASX cost shortfall in 2027-28, and a 25% probability of 10% lower reference order conversion. These reduce 2027 OP by USD7.14m and USD10.2m respectively. The combined 2027 branch contribution is therefore only USD4.914m of OP on USD60.006m net additional revenue. Rising sales alone are not enough to secure high earnings quality.

TAM and competition keep the forecast bounded

The 2025 presentation estimated a USD2.5-3.0bn 2024 BASX-specific thermal equipment wallet, inside the larger data-center cooling market. Management subsequently described approximately 30% annual market growth. A midpoint USD2.75bn growing 30% for three years becomes about USD6.04bn in 2027. The model's USD1.70bn reference BASX revenue is a demanding roughly 28% check against that old scoped pool, with non-data-center business and market definition differences preventing an exact market-share claim. Sustaining that capture requires continued wins, broader customers and actual manufacturing execution.

Original AAON 2025 Investor Day presentation, page 64. Earlier capacity estimates are dated context, not current guidance.

Commercial HVAC provides another established market rather than unlimited AI optionality. The older issuer estimate was USD14.5bn of addressable equipment, with AAON around 6% on its specified 2024 basis. The reference commercial vectors grow more slowly than BASX. Cleanrooms, efficiency upgrades, heat pumps and replacement service provide adjacent demand; speculative robots, space or quantum cooling are not assigned an invented sales pool.

Original AAON 2025 Investor Day presentation, page 43. Earlier capacity estimates are dated context, not current guidance.

The annual report identifies Vertiv, STULZ, Munters, Silent-Aire, Nortek and Modine in thermal management, and Lennox, Trane, Bosch/York, Johnson Controls, Carrier and Daikin in comfort cooling. This is a competitive industry with qualified alternatives. Custom engineering and customer experience can protect programs, but successful products attract capacity and imitation. Modine is the most direct existing cross-watch for chiller and air-handler orders; Vertiv adds system-level service breadth. Munters and Johnson Controls merit targeted follow-up where new order or capacity evidence emerges. STULZ and Nortek remain private-company supply-chain references, not invented public tickers.

Fully expensed profit and financing

All product gross margins include ordinary depreciation and manufacturing costs. SG&A includes modeled engineering, selling costs, SBC and administrative depreciation; the model never values adjusted EBITDA as operating profit. D&A and SBC are added back only in the cash bridge, followed by cash withholding for awards. The 2027 reference SG&A ratio is 12.75%, declining to 11.8% by 2030, so absolute expense still rises substantially. The Coil Products product-level margin split is an estimate because the issuer reports only segment-level gross profit.

The June balance sheet reported only USD0.013m unrestricted cash, plus USD12.714m restricted cash. Restricted NMTC funds are not available for general buybacks or routine working capital. Revolver borrowings were USD435m with USD163.692m further availability after letters of credit; the facility matures May 27, 2030. Consolidated NMTC claims were USD28.866m, separate from the headline revolver. Ordinary operating leases remain expensed and are not deducted a second time as debt. The subsequent office lease adds cost exposure but not free operating capacity. June financial statements.

Funding is tested across all 16 combinations of the four operating branches. The bridge includes 25% cash taxes, 6% revolver interest, capex, dividends, award withholding and working capital equal to 1.22 times positive quarterly revenue increments, calibrated to June operating balances. There is no assumed release of old contract assets when sales fall. Total 2026 capex, including intangibles, is anchored to USD190m. Later reference capex rises from USD160m to USD220m annually, plus the conditional program investment. Full NMTC cash settlement is stressed despite an 85% probability assigned to management's expected forgiveness mechanism.

The worst tested peak revolver is USD517.323m, within the committed facility, and minimum cash is USD4.385m after the 2030 maturity payment. That is a tight stress result, not ample protection against every shock. Valuation conservatively deducts a USD525m revolver funding reserve until maturity, rather than giving credit for lower average borrowing or accumulated cash. The extra USD90m is a derived modeling reserve, not an actual new draw or a reported liability. The cash bridge draws only what is needed. This fixed reserve also prevents a favorable change in operating probability from silently creating free cash in valuation.

Shares, failure tests and what would change the result

The filing cover reports 82.453639m shares outstanding on August 6. Restricted shares are already legally outstanding; they are not added again. The economic starting denominator adds all 2.712129m June options and 0.143190m unvested PSUs at target, then allows 0.15m additional net shares each quarter. Option proceeds receive no cash credit, which is deliberately conservative. PSU maximum payout and future award issuance are dilution sensitivities. No authorization to repurchase shares is assumed executed. The active ceiling uses the resulting end-window denominator, not the quarter's historical weighted-average EPS shares.

The most important tests are Q4 2026 price realization, continued BASX order conversion, customer diversification, liquid-cooling margins, warranty costs, production lead times and collections. Raise the program probability only if new orders and production support an increment beyond the reference. Reduce it if a growing pipeline repeatedly fails to convert, if customers redesign equipment away from BASX or if collection delays consume the remaining credit line. Sustained margin recovery must be measured after Memphis overhead and ordinary compensation.

The company can earn materially more without becoming a monopoly. The strongest thesis is a period of scarce qualified production, supported by a broader thermal portfolio and recovering economics. The weakest version assumes every square foot becomes saleable output, every backlog dollar becomes cash, and all announced price recovery is additional profit. This model explicitly avoids those shortcuts while retaining active exposure to credible forward evidence.

Quarterly funding path

USD millions; model assumptions. Expected values weight the 16 operating combinations. Minimum cash and maximum revolver are separate across-state extrema at each quarter, so they need not describe the same path. The fixed USD525m valuation reserve is distinct from actual modeled draws shown below. NMTC payments assume full cash settlement; no forgiveness is counted as available cash.

Quarter	Expected cash	Minimum cash	Maximum revolver	Expected capex	Expected debt/NMTC payments
Q3 2026	22.2	22.2	435.0	43.7	0.0
Q4 2026	47.9	47.9	435.0	43.7	7.5
Q1 2027	15.6	10.0	490.5	44.1	0.0

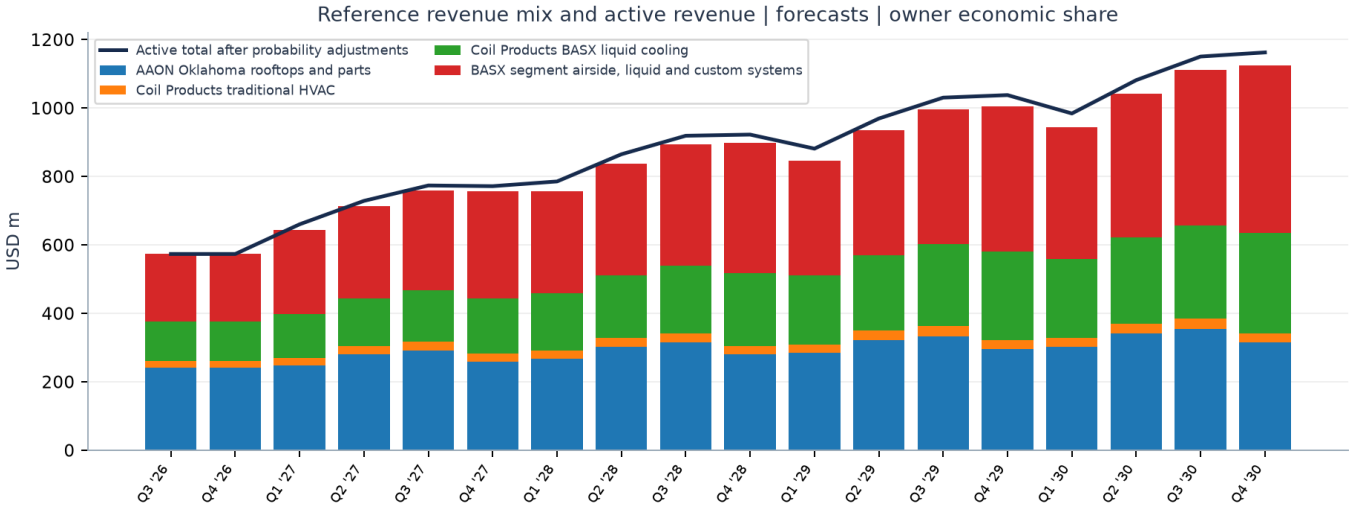

Quarter	Expected cash	Minimum cash	Maximum revolver	Expected capex	Expected debt/NMTC payments
Q2 2027	11.7	10.0	517.3	44.1	0.0
Q3 2027	20.9	13.0	517.3	44.1	0.0
Q4 2027	83.3	65.3	517.3	44.1	0.0
Q1 2028	139.5	97.1	517.3	51.2	0.0
Q2 2028	127.4	78.2	517.3	51.2	0.0
Q3 2028	153.7	96.9	517.3	51.2	0.0
Q4 2028	241.0	175.7	517.3	51.2	0.0
Q1 2029	333.4	259.0	517.3	56.9	0.0
Q2 2029	332.2	252.4	517.3	56.9	0.0
Q3 2029	372.8	286.7	517.3	56.9	0.0
Q4 2029	478.7	385.5	517.3	56.9	0.0
Q1 2030	590.6	487.8	517.3	61.9	0.0
Q2 2030	113.8	4.4	0.0	61.9	485.4
Q3 2030	173.1	57.3	0.0	61.9	0.0
Q4 2030	302.3	179.1	0.0	61.9	0.0

The May 2030 revolver maturity falls in Q2 2030. The expected payment is a probability-weighted amount; each individual state repays its own outstanding principal in full. Cash is not credited in the operating-profit valuation.

Score arithmetic

Category	Points	Evidence / treatment
Core thesis	15	Custom thermal engineering, installed customer qualification and factory slots; competitive rather than indispensable monopoly.
Cycle	8	Rapid capacity ramp with orders supporting near-term production.
TAM	8	Cloud/AI thermal wallet plus commercial HVAC and cleanrooms; no generic AI capex conversion.
Catalysts	4	Late2026 price realization, 2027 utilization and diversified orders.
Macro	8	Data-center investment and efficient HVAC; nonresidential spending remains cyclical.
Alpha	3	Brand/segment overlap, Memphis allocation and cash conversion require careful reconciliation.
Risk classes	-4	Four classes: concentrated orders; manufacturing/warranty execution; input costs/competition; working-capital financing.
Total	42/60	Rounded Base 70. Both artifact and new workbook row use this score; this is not a manual override.

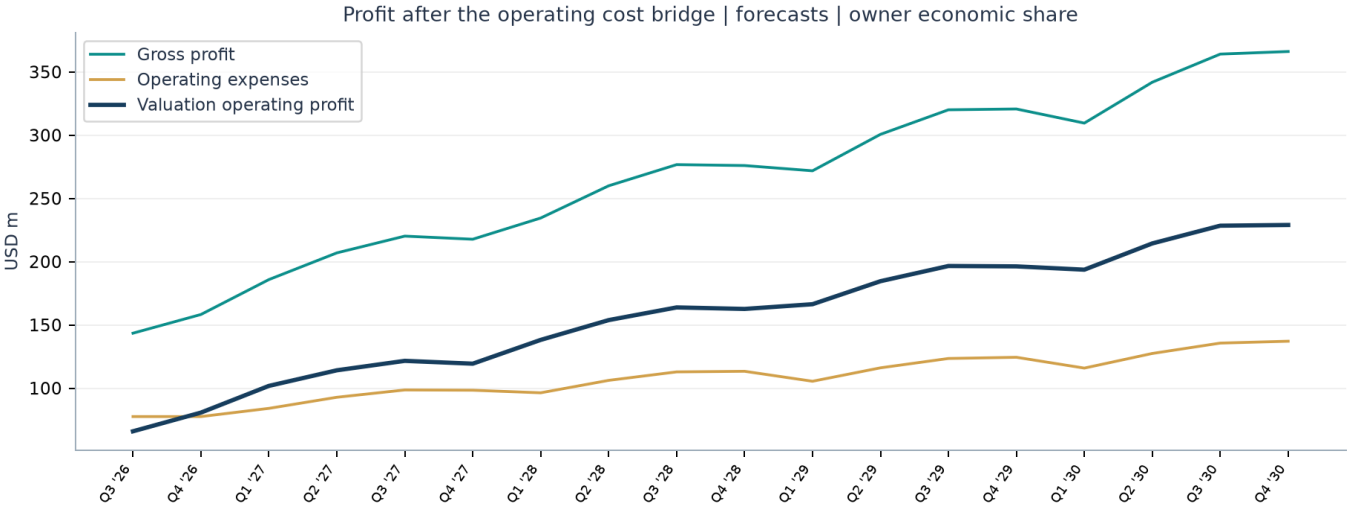

Revenue and business mix

Reference business vectors sum to the reference; the active total adds only probability-weighted net changes. Product allocations may be analytical proxies where issuers do not report product margins.

Quarter	Reference revenue	Weighted net change	Active revenue
Q3 2026	573.7	0.0	573.7
Q4 2026	573.7	0.0	573.7
Q1 2027	644.2	16.2	660.4
Q2 2027	713.5	15.4	728.9
Q3 2027	759.2	14.6	773.9
Q4 2027	758.0	13.8	771.8
Q1 2028	757.8	27.8	785.6
Q2 2028	838.2	26.8	865.1
Q3 2028	893.3	25.9	919.2
Q4 2028	897.7	24.9	922.6
Q1 2029	845.7	35.8	881.5
Q2 2029	934.8	34.7	969.5
Q3 2029	997.0	33.6	1,030.6
Q4 2029	1,005.6	32.5	1,038.0
Q1 2030	943.5	40.9	984.3
Q2 2030	1,042.2	39.6	1,081.8
Q3 2030	1,112.4	38.3	1,150.7
Q4 2030	1,125.7	37.0	1,162.7

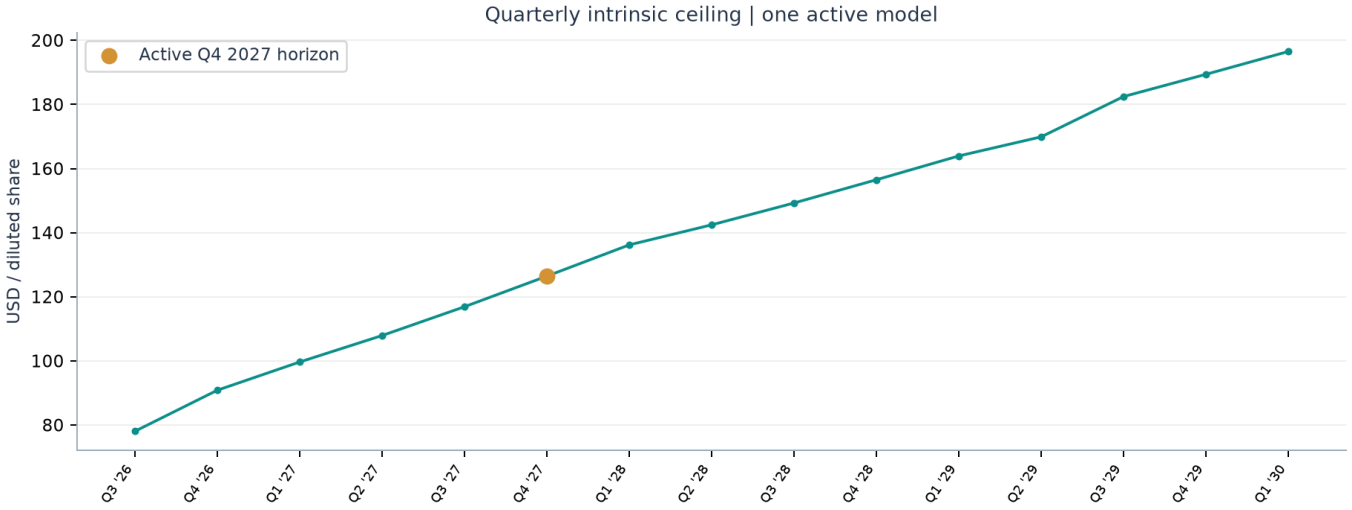

Gross profit, operating expenses and earnings

Operating profit equals gross profit less operating expenses and any separately identified attribution reserve. Figures are forecasts, not reported historical quarterly outcomes.

Quarter	Revenue	GP	Opex	Valuation OP	OP margin
Q3 2026	573.7	143.5	77.6	65.9	11.5%
Q4 2026	573.7	158.2	77.6	80.7	14.1%
Q1 2027	660.4	185.8	84.0	101.8	15.4%
Q2 2027	728.9	207.0	92.8	114.1	15.7%
Q3 2027	773.9	220.2	98.6	121.6	15.7%

The operating constraint behind the forecast

The driver series is a stated model assumption, not a disclosed commitment. It must be evaluated with the qualification, customer capture, cost and overlap discussion.

Quarter	USD1.25m thermal-equipment invoice equivalents, not reported system units	Status
Q3 2026	249.911	Model; calendar and fiscal quarters coincide

Quarterly revenue-vector derivation

All rows below are reference inputs. Gross profit = vector revenue x the stated gross margin, except explicitly labeled zero-sales cost credits. The next table applies the separately weighted evidence deltas. A product-level proxy is a model assumption even when the group total is calibrated to guidance.

Quarter	Revenue vector	Revenue	Gross margin	Gross profit
Q3 2026	AAON Oklahoma rooftops and parts	241.3	24.5%	59.2
Q3 2026	Coil Products traditional HVAC	20.0	25.0%	5.0

The categories reconcile to reference operating expenses. Incremental costs below are applied once; depreciation or stock compensation already included in a reference category is not added again.

Probability-weighted financial bridge

Active = reference + sum(probability x bounded conditional delta). Negative deltas are retained. A branch with zero near-term increment remains zero only for the timing or overlap reasons documented in the evidence register.

The financial claims shown here are matched to the end of each four-quarter earnings window. Operating-quarter cash and claims schedules elsewhere show balances at their own quarter dates.

Claim decisions, overlap and triggers

DC_NEW_PROGRAM

p: 0.55

source: May 7 and August 10 2026 management Q&A; 2025 Investor Day capacity/customer exhibits

hypothesis: Qualified new-customer and broader-product programs beyond the reference BASX ramp begin in 2027.

bounded: 2027 extra USD180m, within USD100-250m; 2028/29/30 extra280/350/400m. Constructed as144/224/280/320 incremental USD1.25m invoice equivalents; invoice value is an analyst modeling proxy, not a disclosed unit ASP.

reference: BASX brand revenue USD1700/2120/2440/2800m in2027/28/29/30 already includes existing customer continuation, old liquid orders and Memphis ramp.

bridge: 30% incremental GAAP GP less10% engineering, sales, support and profit-sharing expense.2027 conditional OP36m, weighted19.8m; weighted revenue99m. Incremental growth capex30/45/50/50m conditional is in funding.

overlap: 50% of an illustrative USD360m new-program gross opportunity is already in the reference, leaving180m. No separate addition for Memphis, total DC TAM, Applied Digital or the historical175m award.

triggers: Raise if diversified bookings and accepted/over-time qualifying production support the extra run-rate; lower on customer delays, warranty claims or facility throughput misses.

SCARCITY_PRICE

p: 0.55

source: August Q&A: internal fan production, constraints, late price-cost catch-up and newly priced backlog

hypothesis: Scarce qualified delivery supports a further premium on new or repriceable work in2027-30.

bounded: 25% of reference BASX sales eligible x3% premium (2-4% bound) x50% remaining after baseline price/cost overlap. Conditional0.375% of reference BASX revenue.

bridge: 80% gross-profit retention after material/expediting costs, less10% engineering/warranty/profit-sharing cost; net70% incremental OP.2027 conditional rev6.375m, OP4.4625m; p-weighted2.454375m OP.

overlap: Reference gross-margin recovery already includes pricing taken inlate2025/2026. Fixed-price backlog and incremental new-program sales excluded from premium base.

triggers: Compare realized gross margin with supplier inflation, not bookings alone.

RAMP_COST

p: 0.35

source: Q2 price-cost miss, outsourcing and capacity-ramp commentary

bounded: Unrecovered120bp of reference BASX sales in2027/28,60bp2029/30, beyond costs already embedded.

bridge: Direct GP/OP reduction;2027 conditional20.4m cost, weighted7.14m. No separate repetition of Memphis overhead.

triggers: Material cost and yield/productivity measures outrun pricing or defects rise.

BOOKING_TIMING

p: 0.25

source: Q2 BASX backlog down11.7% sequentially; annual filing customer cancellation/rescheduling rights

bounded: 10% lower reference BASX conversion in2027-30, representing a bounded delay/share-loss state; not every missed delivery is assumed recovered immediately.

bridge: 31% lost GP less7% saved variable opex;2027 weighted lostrev42.5m andOP10.2m.

overlap: Applied only reference invoices. Additional-program branch is separate incremental scope; correlated large downturn beyond these bounds is an unmodeled failure risk.

triggers: Two quarters of weaker intake, pushouts, or funded project schedules slipping.

NMTC_FORGIVENESS

p: 0.85

source: June10-Q Note18

decision: Management expects the2019 put/call to extinguish part of the7.535m obligation inlate2026. Both repayment and forgiveness remove this liability; no valuation difference under the no-cash-credit policy after settlement. Liquidity conservatively stresses full cash payment. The0.85 subjective likelihood is not counted as operating income or debt twice.

zero reason: After settlement, either payment or forgiveness leaves the same claim; retained cash receives no valuation credit. Full payment is included in the funding control.

EXISTING_ORDERS

p: 1

decision: Historical175m hyperscaler award, greater-than400m liquid orders and June1.430bn BASX backlog calibrate reference production. They are not new incremental revenue layered on top.

zero reason: 100% reference overlap; no attribution of unnamed hyperscaler or Applied Digital order economics without contract evidence.

Remaining bounded uncertainties

- No disclosed quarterly product GM inside Coil Products; traditional and liquid splits are labeled model allocations calibrated to the consolidated segment.

- No latest customer-level capex wallet or reported system ASP. Invoice equivalents and future BASX qualified output are bounded proxies, not customer commitments.

- 2025 slide68 contains a confusing capacity footnote beside a per-GW opportunity figure. It is shown as original context, not used as a universal revenue/GW conversion.

- Full management statements were read in public transcript republications; typos in those transcripts are resolved against official filings/decks. No direct primary audio transcript was supplied.

- Future placement, acquisitions and buybacks excluded. Gross options included without exercise-cash credit, a conservative treatment.

- Future D&A, working-capital intensity, capex and cost leverage are modeled; a larger synchronized growth/collection shock could exhaust the revolver.

Selected original evidence

Sources and basis

The current production framework was read before initiation. Source statements are evidence, not instructions. The shared model data drives both this PDF and the linked Excel model; the clean-state editable artifact embeds these same images.
