ACMR - ACM Research, Inc. | Full investment artifact

Full active edition | Financial methods and portfolio Base overrides preserved.

Evidence update: 2 October 2026 | **Financial-model cutoff:** 18 September 2026 | **Framework:** 8.0 | **Format:** standalone current-state analysis **Status:** NOT HELD in supplied workbook; protected portfolio Base 78 | **Classification:** BOTTLENECK in selected qualified wet-process and plating applications; competitive semiconductor-equipment platform, not a global monopoly **Artifact Base:** 45/60 = **75% - High Conviction** | **Protected portfolio Base:** 78% (user override retained; separate from artifact assessment) **Snapshot:** supplied-workbook price USD 83.800; model share proxy 75.000000M; implied snapshot market capitalization 6,285.000 USD millions. Price is frozen from the supplied workbook, not a current-market refresh; capitalization uses the modeled denominator. **Active ceiling:** Q4 2027 **USD 52.041799**, pricing Q4 2027-Q3 2028. The October calendar selection roll is not a forecast increase. All 15 quarterly ceilings are derived below.

Current orders and the first commercial panel-plating order strengthen the expansion thesis. The model retains substantial growth to a 4B annual business, with explicit new-product and overseas conversion requirements. It also recognizes the lower parent ownership, prospective subsidiary financing and the R&D spending needed to pursue that larger market.

September backlog: new visibility, no duplicated revenue

The September 30 issuer release reports ACM Shanghai backlog of **RMB 17.1B**, approximately **USD 2.5B**, at September 29, up **88.2% year on year**. This is the listed operating subsidiary's order stock, including shipped tools awaiting Chinese-GAAP recognition and future deliveries. It is not additional parent revenue or cash. USD is the issuer's reference translation, not a separately measured backlog.

ACM Shanghai: September 29 backlog

Backlog stock

RMB17.1 billion | issuer reference USD2.5 billion | +88.2% year on year

Recognition scope

Includes tools already shipped but not recognized under Chinese GAAP and future tool orders. Not guaranteed recognized revenue.

Next dated checks

October28: Shanghai nine-month results and parent preliminary figures. Full parent Q3 results/call: early November, date not yet specified.

Source: ACM Research September30 SEC Exhibit99.1; research transcription.

Research transcription of issuer evidence; not an issuer chart. Source: ACM Research September30 SEC Exhibit99.1; research transcription.

Original issuer disclosure. The disclosure confirms the previously pending backlog checkpoint; it does not change annual guidance.

Ledger field	Current treatment
Signal / outcome	ACMR-SHANGHAI-BACKLOG-20260929; stronger order visibility supports delivery into the existing 2027 conversion path
Subjective realization probability	65%; order stock supports demand, while mix, acceptance and timing remain uncertain
Already modeled reference	USD 1550M consolidated 2027 revenue; H1 order growth and new-platform conversion already support this path
Conditional incremental pool	USD 0M separately identifiable above that reference; 100% overlap with existing modeled conversion

Ledger field	Current treatment
Active contribution	65% x USD 0M = USD 0M revenue and OP increment; all quarterly forecasts unchanged
Score	Cycle 9/10 already recognizes very strong orders; analytical 75 and protected Excel 78 unchanged
Parent claim	Preserve existing Shanghai ownership, parent-only costs and diluted-share bridge
Next test	Product-specific deliveries and acceptance, order cancellations, Chinese/US recognition reconciliation and October 28 results

This zero increment is an overlap judgment, not a requirement to wait for official revenue. Applying the probability to the entire USD 2.5B backlog would count the existing revenue pool twice. An identifiable additional product or delivery pool can change the saved trajectory later.

1. Supercycle, supply chain and durable advantage

ACM combines differentiated wet cleaning and electroplating processes with a growing furnace, Track and PECVD portfolio. China localization and more complex logic, memory and advanced packaging increase the number and difficulty of process steps. Growth depends on tool performance, qualification and repeat production orders, rather than China fab spending alone. Global expansion broadens the opportunity, but export restrictions, incumbent platforms and customer acceptance limit near-term capture.

ACM sells process equipment used in front-end and advanced packaging production. ECP serves both domains and must not be added again as a second advanced-packaging revenue pool. Cleaning, Track, thermal and PECVD are distinct process categories, but some share fab budgets and competitors. NAURA, Lam, SCREEN, TEL and AMAT are competitive or adjacent suppliers; broad product portfolios are not automatically non-competing. Horizontal panel plating is promising technical differentiation, not proof that all glass-core projects require ACM.

Business / curve	Stage	Evidence and next inflection
Established cleaning and ECP	Production scale with new applications	Cleaning recognition temporarily weak; ECP installed chamber base expanding.
SPM and Tahoe extensions	Qualification-to-volume conversion	New processes increase served cleaning opportunity.
Furnace, Track and PECVD	Early commercialization	R&D/qualification precede recurring production revenue.
Panel plating and overseas expansion	Initial orders and evaluations	Confirmed delivery dates; scale and final acceptance remain conditional.

Stage percentages are qualitative framework bands relative to a possible mature opportunity, not measured market penetration. A current capacity constraint can coexist with a larger long-term TAM; qualification and economic capture decide how much reaches this company.

2. Forward TAM and the three-phase expansion lens

Phase	Engineering opportunity	Demand-to-company bridge
Phase 1; 100% thematic	Current process-equipment applications	Q2 cleaning 132.978M, combined ECP/furnace/other 128.546M and packaging/services 31.395M are actual calibration.
Phase 2; 50% thematic	Expanded serviceable market	Management increased global SAM from about 21B to 22B. Its cited market study estimates 2026 global equipment at 152.5B and China at 57.6B; those broad totals are not ACM-specific addressable revenue.
Phase 3; 20% thematic	Global, panel and new-platform capture	Undated management 4B revenue target comprises 2.5B mainland China and 1.5B outside. The model assigns a 2030 date, implying 18.2% of today's 22B SAM if it did not grow; actual future SAM and competitive share must be revalidated.

The 100% / 50% / 20% thematic weights guide thesis assessment. They are not blanket discounts to reported sales, contracts or all forecasts. Programme probabilities below govern only separately identified optionality. Current reported sales calibrate the starting point; they do not cap the future market.

3. Current earnings and management evidence

Q2 2026 revenue was 292.919M, GAAP GP 134.618M, operating expenses 84.875M and OP 49.743M. Non-GAAP OP was 56.326M. H1 revenue totaled 524.182M and GAAP OP 85.920M. Updated 2026 revenue guidance is 1,125-1,175M; model 1,150M. The model therefore needs 625.818M in H2, allocated 300M in Q3 and 325.818M in Q4. These quarterly allocations are estimates because management guides the year. Revenue is recognized separately from shipments and evaluation-tool inventory. [S1/S2]

The May 7 and August 7 calls were reviewed through prepared remarks, Q&A and closing. Cleaning remained weak in recognized revenue while new SPM systems progressed; ECP and non-ECP packaging supplied most current growth. H1 orders rose 105%, but management did not publish their dollar amount or an end-market split. The August call targeted more than 20 SPM shipments and more than 20 tools outside mainland China by year-end. These are two different, potentially overlapping populations. Track and PECVD qualification was expected by year-end, not already completed. Lingang's second facility and the Oregon demo centre support subsequent conversion. [S3/S4]

The complete displayed May and August management-call sequences were reviewed. Alternative August transcription omitted the opening remarks and mislabeled USD market figures as CNY; the better transcript and SEC filing control. The August 21 investor deck was listed but could not be retrieved in this pass; no unique claims are attributed to it. Company customer-level tool-content and named panel buyers remain undisclosed. No completed H-share listing was verified by the research date.

4. Local evidence and calibration packet

The Chinese subsidiary's interim report records H1 revenue RMB 3.7181B, net profit attributable to its shareholders RMB 988.95M, and profit excluding nonrecurring items RMB 571.03M, down 15.31%. Investment gains explain much of the headline profit increase. It reports RMB 465.76M expensed R&D plus RMB 196.92M capitalized development, total about 17.82% of sales. The US parent's GAAP basis and consolidation scope control this USD model; Chinese net profit is neither interchangeable with US parent OP nor added to it. AH12 local demand bridge: SMIC's Q2 capex was 1,835.7M versus 1,562.8M in Q1. Eligible wet-process spending is only part of fab capex; customer-specific ACM awards and capacity-to-tool conversion were not disclosed. Use company orders +105%, product shipments and acceptance as LOW-confidence capture proxies. Do not assign the full China WFE growth rate or SMIC capex amount directly to ACM revenue. [S2/S7/S8]

5. Summing thesis score

Category	Points / maximum	Evidence
Core Thesis	16/20	Differentiated process technology and broader tool set; strong incumbents remain.
Cycle Stage	9/10	Order and shipment growth supports future conversion, despite cleaning weakness.
TAM Expansion	9/10	SAM expands to 22B with panel, cleaning and global applications.
Catalysts	4/5	Dated panel orders and qualifications; many amounts remain undisclosed.
Macro	8/10	China and AI investment support demand; controls impede parts and customers.
Alpha	4/5	Acceptance timing, minority interest and Chinese/US reporting require reconciliation.
Risks	-5	Five material risk classes.

Sum: 45/60 × 100 = 75.000000%, conventionally rounded to 75%. This advisory thesis score does not replace any portfolio Base override. The separate risk classes below total the displayed deduction; holding status and classification do not waive that deduction.

6. Revenue sources, capture and product margins

Separate five equipment/product sources while reconciling to the three reported revenue categories. ECP, furnace and Track/PECVD suballocations are analyst estimates within the reported second category. Assign product GM, subtract consolidated GAAP-style R&D/SG&A including SBC, then explicitly account for the Shanghai minority interest and parent-only development costs. The quarterly path is rebuilt from current guidance and programme acceptance rather than mechanically dividing old annual ceilings.

Vector	Actual calibration / source	Forward demand and capture	Margin derivation / constraint
Cleaning	132.978M Q2 actual.	H2 175/200.818M; annual 760/1,020/1,300/1,550M in 2027-30. Requires SPM acceptances and repeat applications.	44.5% H2, 46-47% thereafter; reflects manufacturing and component cost.
ECP	110M estimated within the reported combined category.	H2 85/80M after exceptional Q2 mix; annual 440/560/750/950M. Panel revenue included here.	49% H2, 50% then 51%; higher-margin process differentiation is an estimate.
Furnace	15M estimated Q2; exact allocation not reported.	H2 14/16M; annual 120/210/350/550M from qualification and broader thermal processes.	44% rising to 47% as yield and scale improve.
Track and PECVD	3.546M residual estimated Q2; includes trial/other platform revenue.	H2 4/6M; annual 70/160/300/500M; depends on year-end qualifications and repeat tools.	35% H2, then 40/43/45/46%; early launch costs constrain contribution.
Non-ECP packaging, services and spares	31.395M Q2 actual.	H2 22/23M; annual 160/200/300/450M; no duplicate ECP sales.	42% H2, 43-44% later; service and tool mix unresolved.

Confidence: reported historical totals are HIGH. Source-based forward extrapolations are MEDIUM only where the cited source sizes the relevant period; other product allocations, future capture and margin assumptions are LOW. A source for the historical anchor does not make an unsourced future factor management guidance. The detailed factors below are the single modeled base case, with uncertain assumptions exposed for review.

V1. Cleaning: single wafer, Tahoe and SPM

Sources: S2 reported cleaning category; S4/S6 process developments. Revenue = anchor × factor; GP/contribution = revenue × displayed product margin. Forecast confidence: LOW unless a specific actual/guided total is identified above.

Quarter	Revenue anchor	Demand / conversion factor	Revenue	Product margin	GP / contribution

Q2 2030	31.395000	3.440038	108.000	44.000%	47.520
Q3 2030	31.395000	3.726708	117.000	44.000%	51.480
Q4 2030	31.395000	4.156713	130.500	44.000%	57.420

7. Operating-cost bridge and quarterly operating model

H1 GAAP opex was 155.936M. H2 model opex 112/113M produces 380.936M full-year opex, 33.125% of 1,150M revenue. This allows the August adjusted R&D range of 16-18%, sales/marketing around 8%, G&A 5-6%, plus SBC. Future GAAP-style opex averages roughly 32% in 2027, 30% in 2028, 28% in 2029 and 27% in 2030, with higher Q1 ratios and seasonal revenue. A mature allocation is approximately 17% R&D, 5.5% sales, 2.5% G&A and 2% SBC; explicit quarterly total ratios control calculations. Future product GP remains around the high-40s, within or near the current 42-48% consolidated target. The 69.6M Q2 investment gain is below OP and is not a recurring product-profit source.

Profit basis: Consolidated GAAP-style operating profit including SBC; rolling valuation uses the separately displayed parent economic OP proxy. Amounts below are USD millions.

Quarter	Status	Revenue	GP / contribution	Opex %	Opex	OP margin	Operating profit	Main driver	Confidence
Q3 2026	Model	300.000	136.325	37.333%	112.000	8.108%	24.325	SPM and evaluation acceptance	LOW model

OP = sum of product GP/contribution - explicit operating costs. OP margin = OP ÷ revenue. Displayed numbers are rounded for reading; the workbook calculates from unrounded inputs. Guidance assigned to a future quarter retains Model status because guidance is not an actual result.

Parent economic operating-profit bridge

Current disclosed Shanghai interest is 73.2%, versus 74.6% at year-end 2025. The base case provisions a full proposed 7% post-offer H-share issue plus 15% greenshoe in Q1 2027: 73.2% ÷ (1 + 7%/93% ×1.15) = 67.368629%. This is a prospective modeling allowance, not a completed transaction or confirmed timetable. Thereafter allow 0.3 percentage point of subsidiary dilution each year. Parent-only costs already in consolidated opex are estimated at 8M per quarter in H2 2026, then 10/12/14/16M in 2027-30. These are deducted 100%, rather than giving the parent a minority discount on its own expenses. All remaining operating contribution is conservatively assigned the subsidiary ownership fraction; wholly owned profitable international operations would need a separate allocation once disclosed.

Quarter	Consolidated OP	Parent costs already included	Subsidiary ownership	Attributable OP proxy
Q3 2026	24.325000	8.000000	73.200000%	15.661900
Q4 2026	34.364010	8.000000	73.200000%	23.010455
Q1 2027	40.614000	10.000000	67.368629%	24.097958

Q4 2030	249.255000	16.000000	66.468629%	160.311363

Attributable OP proxy = (consolidated OP + parent-only costs) × subsidiary ownership - parent-only costs. The following ceilings use this proxy. The preceding operating table and annual cross-check show consolidated OP.

8. Multiple, shares and recognition convention

Retain 20× forward four-quarter parent economic operating profit. The ownership adjustment is an economic claim adjustment, not the artifact score or a generic probability haircut. The old migration header’s ownership factors were neither risk probabilities nor consistent with the current 73.2% stake. Full shareholder value is not inferred from the Shanghai exchange quotation.

Use 75M parent fully diluted shares initially, allowing 1% annual dilution. June common shares were 64.651365M Class A plus 4.991808M Class B = 69.643173M; the May 2.884615M share offering is already in those counts. The 75M proxy includes an allowance for equity awards and a full-quarter funding impact; do not add the May issue again. Subsidiary dilution changes the ownership bridge rather than the parent denominator. No future parent cash raise or buyback is assumed without terms. A full proposed H-share issue reduces the ownership claim by about 8% before later awards, while raising cash in the subsidiary; the operating ceiling does not add those proceeds.

The valuation denominator is the ceiling quarter’s diluted-share proxy. It is not a historical EPS weighted-average assumption disguised as a fully known future capitalization. Unit factor: 1; this converts the model units to USD per share. No cash balance, enterprise-value adjustment or after-tax earnings substitution is added to the operating-profit ceiling.

9. Complete rolling four-quarter ceiling derivation

Ceiling quarter	Exact earnings window	Forward 4Q OP	Multiple	Diluted shares M	Ceiling USD	Key inflection
Q3 2026	Q3 2026 → Q2 2027	94.536169	20×	75.000000	25.209645	SPM and evaluation acceptance

- **Q3 2026:** (15.661900 + 23.010455 + 24.097958 + 31.765855) × 20 × 1 ÷ 75.000000 = **25.209645 USD/share**. Window: Q3 2026-Q2 2027.
- **Q4 2026:** (23.010455 + 24.097958 + 31.765855 + 37.399894) × 20 × 1 ÷ 75.186801 = **30.929408 USD/share**. Window: Q4 2026-Q3 2027.
- **Q1 2027:** (24.097958 + 31.765855 + 37.399894 + 43.605892) × 20 × 1 ÷ 75.374067 = **36.317424 USD/share**. Window: Q1 2027-Q4 2027.
- **Q2 2027:** (31.765855 + 37.399894 + 43.605892 + 40.794413) × 20 × 1 ÷ 75.561800 = **40.646479 USD/share**. Window: Q2 2027-Q1 2028.
- **Q3 2027:** (37.399894 + 43.605892 + 40.794413 + 52.377836) × 20 × 1 ÷ 75.750000 = **45.987600 USD/share**. Window: Q3 2027-Q2 2028.
- **Q4 2027:** (43.605892 + 40.794413 + 52.377836 + 60.821106) × 20 × 1 ÷ 75.938669 = **52.041799 USD/share**. Window: Q4 2027-Q3 2028.
- **Q1 2028:** (40.794413 + 52.377836 + 60.821106 + 70.385763) × 20 × 1 ÷ 76.127808 = **58.948004 USD/share**. Window: Q1 2028-Q4 2028.
- **Q2 2028:** (52.377836 + 60.821106 + 70.385763 + 68.960022) × 20 × 1 ÷ 76.317418 = **66.182723 USD/share**. Window: Q2 2028-Q1 2029.

- **Q3 2028:** (60.821106 + 70.385763 + 68.960022 + 86.687093) × 20 × 1 ÷ 76.507500 = **74.987154 USD/share**. Window: Q3 2028-Q2 2029.
- **Q4 2028:** (70.385763 + 68.960022 + 86.687093 + 99.506670) × 20 × 1 ÷ 76.698056 = **84.888605 USD/share**. Window: Q4 2028-Q3 2029.
- **Q1 2029:** (68.960022 + 86.687093 + 99.506670 + 114.429459) × 20 × 1 ÷ 76.889086 = **96.134123 USD/share**. Window: Q1 2029-Q4 2029.
- **Q2 2029:** (86.687093 + 99.506670 + 114.429459 + 97.857439) × 20 × 1 ÷ 77.080592 = **103.393254 USD/share**. Window: Q2 2029-Q1 2030.
- **Q3 2029:** (99.506670 + 114.429459 + 97.857439 + 122.174987) × 20 × 1 ÷ 77.272575 = **112.321494 USD/share**. Window: Q3 2029-Q2 2030.
- **Q4 2029:** (114.429459 + 97.857439 + 122.174987 + 139.716058) × 20 × 1 ÷ 77.465036 = **122.423732 USD/share**. Window: Q4 2029-Q3 2030.
- **Q1 2030:** (97.857439 + 122.174987 + 139.716058 + 160.311363) × 20 × 1 ÷ 77.657977 = **133.935976 USD/share**. Window: Q1 2030-Q4 2030.

10. Annual trajectory cross-check

Calendar year	Revenue	GP / contribution	Opex	OP	OP margin
2027	1,550.000	720.400	497.860	222.540	14.357%
2028	2,150.000	1,005.700	647.580	358.120	16.657%
2029	3,000.000	1,425.000	843.600	581.400	19.380%
2030	4,000.000	1,899.500	1,084.800	814.700	20.367%

These are calendar-year sums of the quarterly path, not extra revenue and not the live valuation method. For non-December fiscal reporters, fiscal guidance and these calendar totals must be aligned using the period mapping above; a four-quarter run rate is not automatically the same fiscal year. Outer-year outputs are conditional TAM/capture trajectories, not verified management sales targets.

Annual revenues are 1,550/2,150/3,000/4,000M in 2027-30. Each product's year is phased 21%/24%/26%/29% to reflect acceptance/back-half weighting, with explicit H2 2026 guidance calibration. The forecast reaches management's undated 4B ambition in 2030; this is ambitious, not an independently confirmed delivery plan. Lingang's two facilities support up to 3B annual output, so the 4B outcome also needs Korea/US capacity or additional productive space and supply. The annual cross-check is consolidated; parent economic OP in the ownership table is the only numerator used for rolling ceilings. Holding the stake at 73.2% would increase the affected ceilings; approval, size and timing of H-share financing remain a required update.

11. Dilution sensitivity - same operating case

Denominator sensitivity	Q3 2027 shares M	Q3 2027 ceiling USD	Effect on ceiling
-5% shares	71.962500	48.408000	+5.26%
+0% shares	75.750000	45.987600	+0.00%
+5% shares	79.537500	43.797714	-4.76%
+10% shares	83.325000	41.806909	-9.09%

This isolates denominator uncertainty; it is not a second bull/bear operating case or permission to remove known dilution. The base case remains the explicit share path in the rolling table.

12. Programme and probability ledger

Programme / signal	Source and probability	Amount / unit base	Treatment in this model	Escalation / recognition
SPM rollout	Company shipment plan; 80% delivery confidence	More than 20 systems by end-2026; value undisclosed	Within cleaning revenue; recognition follows acceptance	Track shipments, qualification and repeat purchase orders separately.
Panel production order	Confirmed order; 90% delivery / 80% timing judgment	One 510×515mm tool; undisclosed price	Within ECP forecast, not a separately invented contract amount	Delivery H1 2027; customer identity not public.
Panel evaluation order	Confirmed evaluation; 65% later acceptance judgment	One 310×310mm tool; undisclosed price	No automatic Q4 revenue; later conversion embedded in ECP	Delivery Q4 2026 then testing/acceptance.
Track and PECVD	Customer evaluation; 65% production qualification judgment	No disclosed recurring order total	Explicit small 2026 and rising 2027-30 revenue vector	Year-end qualification, yields and repeat orders.
International target	Management long-range ambition; LOW schedule confidence	1.5B of eventual 4B revenue	Embedded in aggregate 2030 case, not extra revenue	Oregon lab, Korea output and customer production approvals.
H-share financing	Proposed; 70% completion judgment	Up to 7% post-issue shares plus 15% greenshoe	Full dilution provision in Q1 2027; no probability-weighted second charge	Replace allowance with actual approved terms when available.

Probabilities are analyst judgments under the framework signal hierarchy. Embedded revenue is not multiplied or added a second time. Where no defensible amount or unit base exists, the opportunity remains explicitly unquantified; confidence alone cannot create a revenue number. New evidence can enlarge the TAM, improve capture or move recognition earlier, but each requires an identifiable model input.

13. Scored risk classes

Risk class	Scored deduction	Mechanism and consequence
Export controls and geopolitical access	-1	Shanghai and Korea Entity List restrictions constrain controlled components and global customer access.
Qualification and competing platforms	-1	Evaluations may not turn into repeat orders; cleaning and new platforms face incumbents.
Supply, inventory and working capital	-1	Long lead times and acceptance delays consume cash and can cause reserves.
Minority interest and financing dilution	-1	Subsidiary awards/listing and parent issuance dilute different claims on earnings.
R&D intensity and margin execution	-1	Multiple launches, overseas operations and competition can hold operating margins below the model.

14. Dated catalysts, counters and escalation

1. **October 28, 2026 - Backlog conversion and nine-month results** September 30 backlog disclosure is complete. Reconcile the RMB 17.1B order stock with product shipments, acceptance and parent reporting; full Q3 call follows in early November, exact date pending.
2. **Q4 2026 - SPM, Track, PECVD and Oregon** Validate more-than-20 SPM deliveries and specific production approvals.
3. **H1 2027 - Panel production order** Confirm delivery and revenue recognition; seek repeat systems and disclosed customer evidence.
4. **Each quarter - Margin and investment gains** Reconcile operating growth, SBC, inventory reserves and nonoperating portfolio marks.
5. **On H-share transaction update - Ownership and parent economics** Update only with issued share counts and completed terms; protect the portfolio Base override.
6. **2027-30 - Revenue/cash/capacity fit** Two quarters of delayed acceptance or rising evaluation inventory without orders require a slower ramp.

15. Cross-book monitoring

NAURA, Piotech and Hwatsing share China fab-investment exposure with product-specific competition. KFMI supplies materials and parts at a different layer. BOE's potential glass-substrate work is an application link, not a confirmed ACM customer relationship. Existing manufacturing and electroplating evidence is sufficient to model the opportunity without naming an undisclosed buyer.

16. Source register and model limits

S1 - Q2 release and financial reconciliations (2026-08-07). Quarterly actuals, raised annual guidance and shipment distinction.

S2 - Q2 Form 10-Q (2026-08-07). Revenue categories, ownership, share issuance, proposed H listing and controls.

S3 - Q1 management call (2026-05-07). Reviewed public speaker sequence through closing; new-product and capacity bridge.

S4 - Q2 management call transcript (2026-08-07; published 2026-08-14). Full displayed prepared remarks/Q&A/closing reviewed; corrects incomplete alternative transcription.

S5 - First panel-plating production and evaluation orders (2026-08-07). One production tool H1 2027; separate evaluation tool Q4 2026. Customers unnamed.

S6 - Tahoe wet-processing platform expansion (2026-08-07). Additional etch and monitor-wafer reclaim applications; volume production evidence.

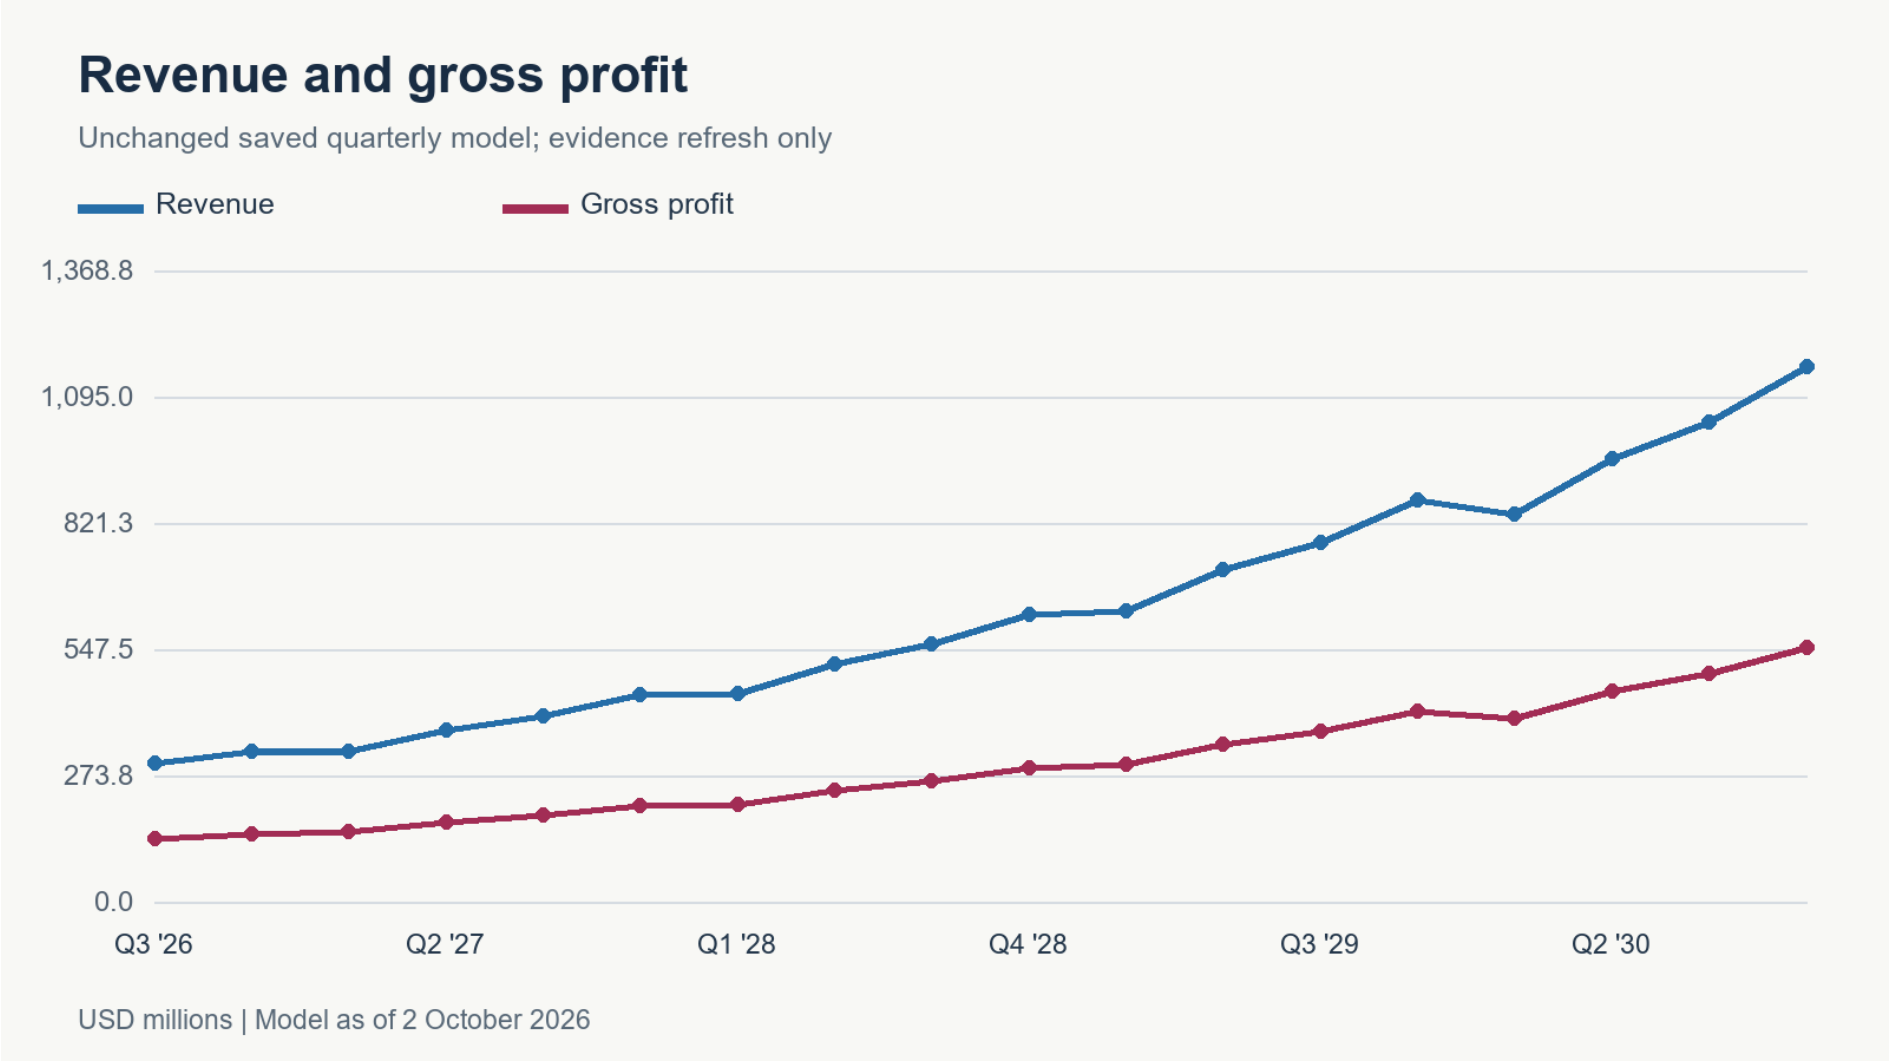

S7 - 盛美上海2026年半年度报告 (2026-08-08). Original Chinese interim report, R&D capitalization and nonrecurring earnings bridge.

S8 - SMIC Q2 company results, Chinese filing copy (2026-08-13). Customer-industry spending cross-check; not a disclosed ACM purchase order.

The 4B annual 2030 path is a conditional analyst schedule for an undated management ambition. Future product mix, category margins, parent-only costs, share issuance timing and capture are LOW confidence. The listed subsidiary is consolidated but not wholly owned. A quotation of its market capitalization is not cash distributable to ACMR shareholders. No SOTP re-rating, unrealized investment gain or unsupported named BOE sale is added to the operating ceiling.

Workbook: Positions_61_90_Before_After.xlsx, model tab 70_ACMR. It owns portfolio ranking, prices and return calculations; those are intentionally outside this artifact. **Current artifact path:** G:\My Drive\1amInvesting\Artifacts\Artifact Rescore Sept 6 2026\ACMR_ACMResearch_DeepDive.md. **Original snapshot:** versions/originals/ACMR_ACMResearch_DeepDive.md. Superseded history is retained separately in VERSION_LOG, not in this current-state model.
