AIXA.DE - Aixtron SE

Full investment research | Model assumptions and source evidence

Framework 8.0 evidence review · Engineering reviewed: 6 October 2026 · Earnings/model calibration retained: 6 September 2026

Status: Integrated original research and approved earnings model; evidence qualifications remain active.

Classification: COMPOUND-SEMICONDUCTOR EQUIPMENT BOTTLENECK - deposition capacity and customer acceptance

Portfolio Base: 80/100 - user-selected. Analytical recommendation: **83/100 (50/60)**, advisory only.

Active Q4 2027 operating ceiling: EUR 99.82 per share. The later Q1 2028 ceiling remains EUR 107.87; the active-horizon label does not change the forecast. Financial amounts: EUR millions; margins derived where applicable. Ceilings: EUR per share.

The ceiling is one conditional operating case. Probability is not multiplied into revenue, operating profit or the ceiling. Portfolio Base and the analytical category score are distinct; the latter does not overwrite the former.

1. Thesis, products and competitive position

Deposition is upstream of the optical device

AIXTRON supplies deposition equipment used to grow compound-semiconductor layers. Its optoelectronic, GaN, SiC, LED/research and after-sales exposure spans different customer investment cycles. InP-related laser demand can tighten a qualified process or tool supply chain while power-device customers are still absorbing prior investment.

The original G10 platform map links AsP equipment to relevant optoelectronics, GaN to power/RF applications and SiC to power devices. CW, EML and DFB lasers, EV/grid devices, microLED and other applications have different process requirements. Neither every compound semiconductor nor every InP laser is necessarily produced using AIXTRON equipment; Veeco, AMEC and alternative deposition routes require product-specific competitive analysis.

Turning device demand into equipment revenue

A photonics systems TAM is not a deposition-equipment TAM. A defensible bridge needs device demand, wafer output, usable reactor throughput, customer installed capacity, equipment allocation, ASP and acceptance timing. Tool delivery creates potential capacity; customer installation and qualification determine when that capacity produces saleable devices. The original 12-18 month lag is a planning observation, not a universal schedule.

The current optoelectronic order inflection is therefore a useful leading indicator for laser suppliers, subject to who placed the order and which process is being expanded. GaN/SiC power, microLED, LiDAR, defense and quantum-related applications broaden the technological opportunity without guaranteeing simultaneous revenue ramps. The five-vector model and current convertible denominator below are the sole numerical operating case.

Research provenance: the product and competitive analysis in this section synthesizes the supplied original research. Dated market-share, process and channel claims retain their original evidence status; this integration is not a new independent verification of those claims. Current earnings and model assumptions are set out below.

Named optical orders connect the tool thesis to a customer

The March article links laser-capacity investment to epitaxy equipment. A stronger later source names the customer: on May 19 AIXTRON disclosed multiple **Lumentum G10-AsP orders** for InP optical production. The platform supports 6-inch processing and manufacturing controls intended to improve repeatability and handling. This confirms a commercial equipment relationship; the release does not disclose reactor count, contract value or customer-acceptance dates. AIXTRON's Lumentum release.

The conversion chain is customer device demand, required good epitaxial wafers, installed reactor throughput, tool orders, delivery and acceptance. A 6-inch wafer or new reactor does not by itself establish qualified good-laser output: recipe uniformity, defect density, wafer handling, process cycle time and device qualification determine the saleable result. NVIDIA funding received by optical customers is not automatically spent on AIXTRON tools, and customer laser sales cannot be counted again as equipment sales.

Probability and model treatment: assign an 85% research probability that some of the announced tools are accepted by the end of 2027. The conditional amount is undisclosed. The active model already assumes optical MOCVD revenue of **€780M in 2027 and €1.12B in 2028**, with 49% gross margin. We allocate the named order evidence inside that existing customer-expansion thesis (100% overlap for this review), retaining a zero additional revenue/OP increment. This is an analytical inclusion judgment rather than a quantified customer-order reconciliation. The inherited optical gross profit is €382.2M/€548.8M before common opex; delivery, installation, service and manufacturing costs remain in the current margins and expense schedule. No new pricing premium is inferred from the funding headline or product launch.

Bounded allocation check: to test the size of the opportunity without inventing a reactor count or selling price, use a 5-10% slice of the existing 2027 optical-revenue pool. This is an analyst-selected sensitivity range, not an estimate of Lumentum's undisclosed contract value or share. It gives €39-78M conditional revenue, or €33.15-66.30M at the 85% timing weight. Apply the existing 49% optical gross margin and use the existing 2027 company opex/revenue ratio of 16% only as a transparent allocation proxy. The resulting weighted OP attribution is €10.9395-21.879M before overlap. Assigning that slice entirely inside the already forecast optical ramp removes it from the incremental column. It leaves zero additional revenue, cost, OP or valuation. A true customer-level allocation may differ; delivered reactors, acceptance dates and net contract prices would replace this diagnostic.

2027 sensitivity, EUR M unless stated	Low slice	High slice
Share of existing €780M optical pool	5%	10%
Conditional revenue attribution	39.0000	78.0000
Timing probability	85%	85%
Weighted revenue attribution	33.1500	66.3000
COGS attribution, 51%	16.9065	33.8130
Gross profit attribution, 49%	16.2435	32.4870
Opex allocation proxy, 16%	5.3040	10.6080
Operating profit attribution	10.9395	21.8790
Overlap with existing optical forecast	100%	100%

2027 sensitivity, EUR M unless stated	Low slice	High slice
Net incremental revenue and OP	0.0000	0.0000

This evidence supports the optical vector while leaving GaN/SiC customer cycles separate. Reactor count, order value, acceptance dates and qualified throughput are the remaining bridge gaps. The existing **25× OP** basis, 121.933002M economic shares, analytical Base83 and protected Excel Base80 remain unchanged. Active Q4 2027 target remains **€99.823262**; the later Q1 2028 target remains **€107.870714**.

2. Earnings, guidance and operating assumptions

Latest earnings and management guidance

H1 actual revenue EUR174.5M, gross profit EUR57.5M and EBIT negative EUR7.6M. Q2 orders were EUR214.5M; equipment backlog was EUR456.9M. Customer advances support production funding. Latest financial source.

FY2026 revenue guidance is EUR560M ±30M, gross margin about 42% and EBIT margin 17-20%. Q3 revenue is EUR180M ±20M. The model uses Q3 180 and Q4 205.5, reconciling full-year revenue to 560.

Model and evidence

Five product vectors distinguish optical MOCVD, power, LED, research tools and after-sales. The H2 gross-profit bridge equals full-year revenue times 42% less H1 gross profit. Quarterly product GMs allocate that guide; they are not disclosed GMs. H2 opex of EUR66.4M yields full-year EBIT within guidance. Beyond 2026 optical production ramps and a slower power recovery are LOW-confidence assumptions. The share denominator includes full conversion at the initial EUR50.375 conversion price.

HIGH denotes reported actuals or the stated guidance, not guaranteed future results. MEDIUM denotes sourced extrapolation. Forward product splits, margins, recognition schedules and long-term growth not specifically guided are LOW confidence.

3. Analytical score

The category arithmetic gives **50/60 = 83/100** after the existing -3-point risk deduction. The portfolio Base remains **80/100**. Risk-class detail appears in section 7.

Category	Points	Maximum	Evidence
Core thesis	18	20	Compound-semiconductor deposition tools sit upstream of optical production. The current demand inflection is optoelectronics; weak SiC/GaN power-equipment demand cannot be assumed to recover at the same pace.
Cycle stage	9	10	Latest reported conversion and management timing; forecasting risk is scored separately.
TAM expansion	9	10	Addressable products and expansion discussed in the industry section; overlapping pools are not added.
Catalysts	5	5	Next earnings, qualification, delivery and capacity milestones.

Category	Points	Maximum	Evidence
Macro	9	10	AI infrastructure demand supports the cycle; customer spending is not guaranteed supplier revenue.
Alpha	3	5	Differentiation comes from product, accounting and recognition analysis, not price performance.
Risk penalty	-3	0	Active financing, execution, competitive and accounting/model risks listed below.

4. Product economics and quarterly operating model

Forecasts distinguish reported anchors from guidance and analyst assumptions. Where the model uses segment OP or an adjusted profit proxy rather than product GP less opex, the stated basis applies; do not treat those proxies as a newly disclosed GAAP decomposition.

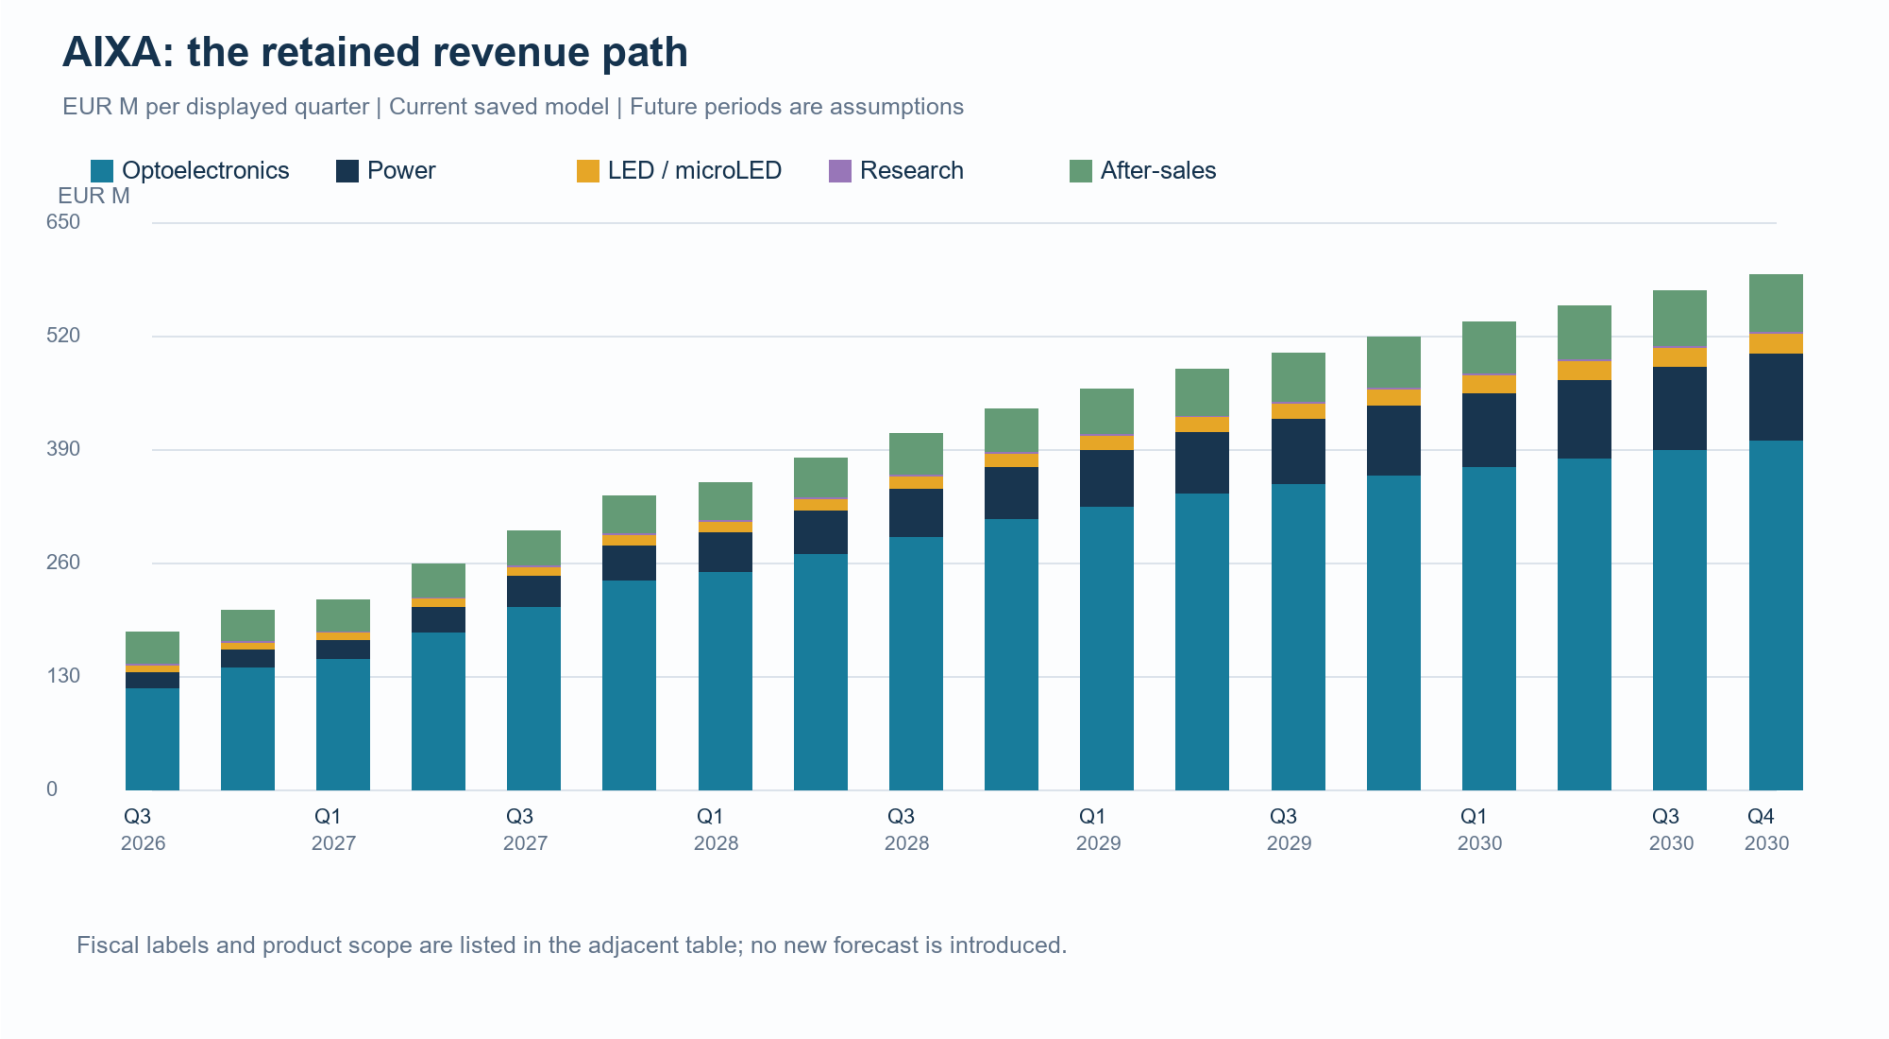

Quarterly revenue and operating profit

Amounts in EUR millions; margins derived where applicable. Shares are in millions, using the economic denominator shown below. A positive deduction reduces profit.

Calendar quarter	Fiscal period	Status	Revenue	Profit before deduction	Deduction	OP	OP margin
Q3 2026	Q3 2026	Model	180.000	81.490	32.800	48.690	27.05%
Q4 2026	Q4 2026	Model	205.500	96.210	33.600	62.610	30.47%

Product/segment inputs

Margin basis: Gross margin. Revenue × the listed margin gives the product/segment contribution; sum contributions and subtract the deduction above to obtain OP. Product inputs are model estimates unless identified as reported. Source anchors and guidance are cited below; future inputs also retain the sanctioned workbook assumptions where separately identified as model assumptions.

Optoelectronic MOCVD

Q4 2028	49.000	54.00%	26.460
Q1 2029	51.000	54.00%	27.540
Q2 2029	53.000	54.00%	28.620
Q3 2029	55.000	54.00%	29.700
Q4 2029	57.000	54.00%	30.780
Q1 2030	59.000	54.00%	31.860
Q2 2030	61.000	54.00%	32.940
Q3 2030	63.000	54.00%	34.020
Q4 2030	65.000	54.00%	35.100

Annual trajectory cross-check

Calendar year	Revenue	OP
2027	1,107.000	350.340
2028	1,576.000	526.120
2029	1,959.000	636.180
2030	2,252.000	726.840

These annual sums are cross-checks, not separate valuation endpoints. Fiscal-year companies retain their fiscal labels in the quarterly table.

5. Forward four-quarter operating ceiling

Ceiling = sum of OP in the stated quarter and next three quarters × multiple × attribution factor × unit conversion ÷ economic diluted shares.

Quarter	Exact window	Basis	Forward 4Q	Multiple	Shares	Factor	Unit conversion	Ceiling/share
Q3 2026	Q3 2026 → Q2 2027	OP	262.070	25.000	121.933	1.000	1.000	53.732
Q4 2026	Q4 2026 → Q3 2027	OP	306.930	25.000	121.933	1.000	1.000	62.930
Q1 2027	Q1 2027 → Q4 2027	OP	350.340	25.000	121.933	1.000	1.000	71.830
Q2 2027	Q2 2027 → Q1 2028	OP	399.010	25.000	121.933	1.000	1.000	81.809
Q3 2027	Q3 2027 → Q2 2028	OP	444.310	25.000	121.933	1.000	1.000	91.097
Q4 2027	Q4 2027 → Q3 2028	OP	486.870	25.000	121.933	1.000	1.000	99.823
Q1 2028	Q1 2028 → Q4 2028	OP	526.120	25.000	121.933	1.000	1.000	107.871
Q2 2028	Q2 2028 → Q1 2029	OP	557.760	25.000	121.933	1.000	1.000	114.358
Q3 2028	Q3 2028 → Q2 2029	OP	587.500	25.000	121.933	1.000	1.000	120.455
Q4 2028	Q4 2028 → Q3 2029	OP	613.640	25.000	121.933	1.000	1.000	125.815

Quarter	Exact window	Basis	Forward 4Q	Multiple	Shares	Factor	Unit conversion	Ceiling/share
Q1 2029	Q1 2029 → Q4 2029	OP	636.180	25.000	121.933	1.000	1.000	130.436
Q2 2029	Q2 2029 → Q1 2030	OP	660.120	25.000	121.933	1.000	1.000	135.345
Q3 2029	Q3 2029 → Q2 2030	OP	682.360	25.000	121.933	1.000	1.000	139.905
Q4 2029	Q4 2029 → Q3 2030	OP	704.600	25.000	121.933	1.000	1.000	144.465
Q1 2030	Q1 2030 → Q4 2030	OP	726.840	25.000	121.933	1.000	1.000	149.024

Q1 2028 chain: (117.790 + 126.950 + 136.110 + 145.270) × 25 × 1 × 1 ÷ 121.933002 = **107.870714**. Display rounding can cause small table differences; Excel uses full precision.

Share sensitivity, same operating case

Denominator change	Q1 2028 ceiling
No change	107.871
5% more shares	102.734
10% more shares	98.064

Financial view 3. Complete retained valuation path

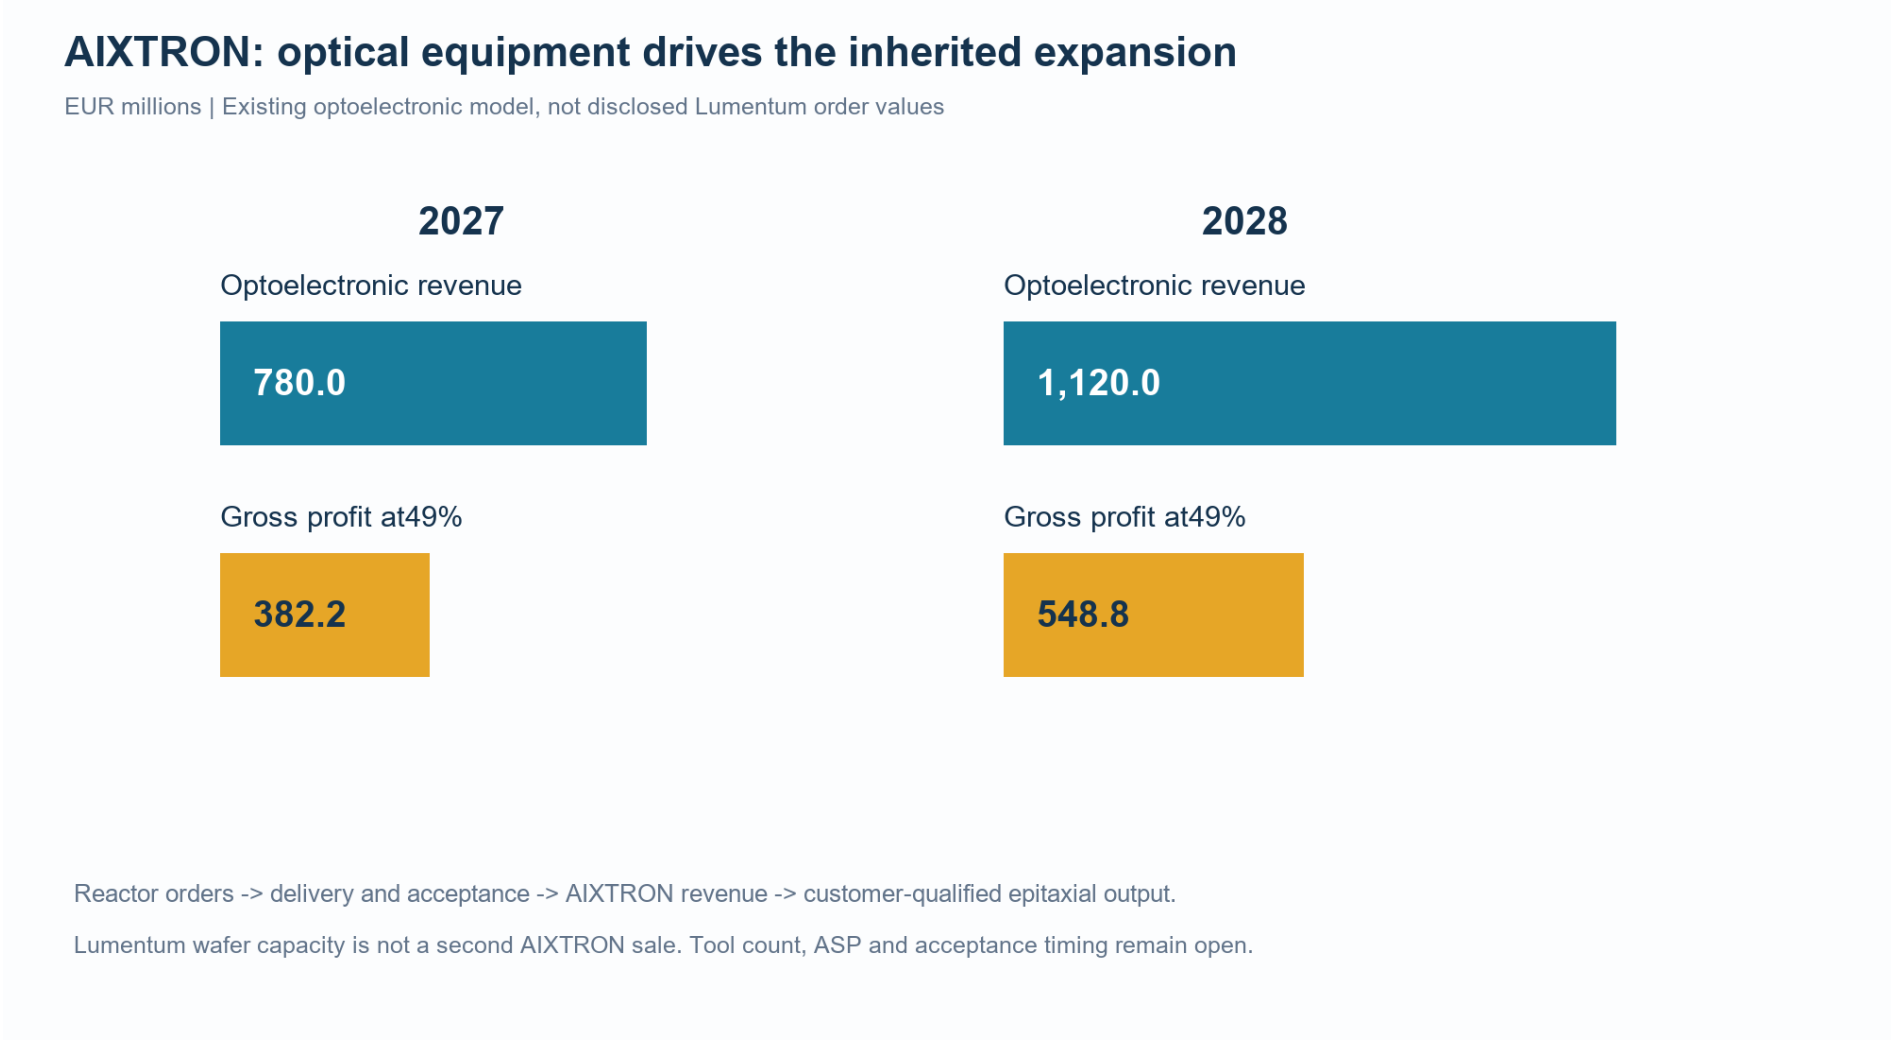

Existing AIXA forward-four-quarter targets; active Q4 2027 highlighted.

The active horizon is Q4 2027. The first quarter in each row plus the following three quarters forms the window. Shares are millions; profit is EUR M. Multiple, share path and probability/attribution factor are unchanged.

Quarter	Window end	4Q OP	Multiple	Shares	Target
Q3 2026	Q2 2027	262.070000	25	121.933002	53.732377

Quarter	Window end	4Q OP	Multiple	Shares	Target
Q4 2026	Q3 2027	306.930000	25	121.933002	62.930050
Q1 2027	Q4 2027	350.340000	25	121.933002	71.830430
Q2 2027	Q1 2028	399.010000	25	121.933002	81.809271

Q4 2027	Q3 2028	486.870000	25	121.933002	99.823262
Q1 2028	Q4 2028	526.120000	25	121.933002	107.870714
Q2 2028	Q1 2029	557.760000	25	121.933002	114.357883
Q3 2028	Q2 2029	587.500000	25	121.933002	120.455494
Q4 2028	Q3 2029	613.640000	25	121.933002	125.814994
Q1 2029	Q4 2029	636.180000	25	121.933002	130.436385
Q2 2029	Q1 2030	660.120000	25	121.933002	135.344818
Q3 2029	Q2 2030	682.360000	25	121.933002	139.904699
Q4 2029	Q3 2030	704.600000	25	121.933002	144.464580
Q1 2030	Q4 2030	726.840000	25	121.933002	149.024461

Financial view 4. Optical equipment conversion

Existing AIXTRON optical revenue and gross profit; customer-specific order amounts remain undisclosed.

The existing 49% optical margin yields €382.2M/€548.8M product gross profit for 2027/2028 before common operating expenses. Named customer orders support this inherited ramp; they do not establish an additional revenue tranche. The total company opex schedule remains €177.12M/€220.64M, with no unsupported customer allocation.

Existing model	2027	2028
Optoelectronic revenue, EUR M	780.000	1,120.000
Optical GM	49%	49%
Optical GP, EUR M	382.200	548.800
Total company opex, EUR M	177.120	220.640
New increment, EUR M	0.000	0.000

6. Industry relationships and read-throughs

Industry learning and read-through

LITE and COHR capacity investment is an equipment-demand signal, not guaranteed AIXTRON revenue. Growth in 800G/1.6T optics should be translated into deposition capacity and acceptance dates; tools are not interchangeable with substrates or finished lasers.

Lumentum, Coherent, Sivers and other laser/device suppliers can provide customer-capex evidence. Riber's MBE and oxide routes are distinct from AIXTRON's MOCVD opportunity. A new reactor is not equivalent to a substrate sale, a qualified laser shipment or an optical module sale.

7. Risks and falsification tests

The following ledger makes the existing aggregate risk deduction explicit. It does not introduce another deduction or change the analytical score.

Risk class	Existing deduction
Tool delivery, customer acceptance and qualification	-1
Optical-cycle normalization and power-market recovery	-1
Competition, export restrictions and convertible dilution	-1
Total	**-3**

Risks and next tests

1. Customer acceptance slips from the guided H2 delivery window.
2. Optical orders normalize before power markets recover.
3. Competition, export rules and convertible dilution constrain captured value.

At the next release, replace the reported quarter with actuals, reconcile the next guided quarter, and change only the affected product, cost, timing or share input. Resolve the stated evidence gaps before treating this as a fully certified Framework 6.0 deep dive.

Numbered monitoring tests

#	Checkpoint	Evidence supporting the operating case	Counter-test / failure signal
1	H2 conversion	Reconcile backlog to accepted deliveries and the guided full-year profit bridge.	Delivery without acceptance or a timing slip invalidates the affected quarter.
2	Capacity bridge	Translate named customer investment into reactor demand and allocation.	The full photonics TAM cannot be treated as AIXTRON equipment sales.
3	Cycle separation	Track optoelectronic orders separately from GaN/SiC recovery.	Strength in one product does not prove simultaneous recovery in another.
4	Competition and capital	Monitor process wins, export conditions and conversion terms.	A competitor qualification or different economic dilution changes captured value.

8. Sources, evidence gaps and model snapshot

- Beyond 2026, product revenue and margins are LOW-confidence analyst ramps, not orders or company guidance. Customer-specific capex allocation is not disclosed; the proxy uses the company order book and recognition timing.
- 113M legacy ordinary-share assumption plus full initial-price conversion of EUR450M bonds is a conservative economic denominator; conversion is not assumed completed. No cash value from the bond is added.

Both latest management prepared speeches and H1 guidance checked. Full Q&A transcripts are not reconciled.

Sources below are those documented in the supplied earnings review. LOW-confidence product allocations, future margins, capacity bridges and incomplete management-call records remain unresolved where stated. Integrating the original research does not itself establish full Framework 6.0 evidentiary certification.

- 2026-07-30: H1 earnings and outlook.
- 2026-07-30: H1 management prepared remarks.
- 2026-04-30: Q1 management prepared remarks.
- 2026-04-15: Convertible terms.
- Numerical operating case: approved portfolio model; economic assumptions and evidence qualifications are stated in this artifact.

The unchanged original source document is retained separately for full research provenance. It is an archive, not an additional active valuation case. Superseded score/ceiling tables are not incorporated into this active artifact.

Model snapshot: approved portfolio operating case at 6 September 2026; 15 ceiling endpoints from Q3 2026 through Q1 2030. Q1 2028 = EUR 107.870714 per share. Portfolio Base = 80/100. Category score = 50/60. Forecast evidence and accounting exceptions are stated above.
