JBL - Jabil | Full investment artifact

Full active edition | 20x forward core OP authorized 1 October 2026; forecasts and Base preserved.

Research date: 1 October 2026 | **Framework:** 8.0 | **Currency:** USD; financial tables in millions unless noted. **Classification:** BENEFICIARY - qualified manufacturing, power, cooling and rack integration. Supplied holding status: watchlist. **Analytical Base:** 41/60 = **68** | **Protected Excel Base: 68**, unchanged. **Active Q4 2027 ceiling: $631.69**. The 1 October 2026 authorized multiple revision increases the prior same-forecast 16x ceiling of **$505.35** by **25.00%**. Next horizon roll: 1 January 2027. **Current method:** 20x rolling forward-four-quarter core operating profit, divided by the unchanged 106.0M diluted-share proxy. Multiple authorized by the user on 1 October 2026; forecasts, earnings windows and Base 68 are unchanged.

Formal FY27 guidance increases the revenue anchor, but its 6.1% core margin is below our previous 6.377% estimate. Both effects flow through the model. The latest diluted share proxy also falls from106.5M to106.0M. FY28+ growth rates are retained, with revenue and production-cost assumptions rebased to the new FY27 guidance. These later years are our model, not guidance.

1. Supercycle, supply chain and durable advantage

Jabil captures a portion of the AI infrastructure build through qualified manufacturing and integration. Power, cooling and optics can raise value added, but purchasing scale and customer qualifications do not establish sole-source control. The conditional ceiling assumes existing and newly won customers use the expanded footprint; it does not assume ownership of the accelerator economics.

DB10 inference infrastructure and DB1 photonics: customer systems → procured components, assembly, test and integration → racks, optics, power and cooling → delivered deployment. The qualified footprint and engineering experience are valuable, but hyperscalers own the system economics and can qualify alternatives. Geographic expansion raises available capture, not global end-demand by itself.

Business / curve	Stage	Evidence and next inflection
AI compute and networking	Scaled ramp;10-50% qualitative	Existing programmes and newer customers support continuing deployment growth.
Power, cooling and optical capability	Early to middle ramp	Higher content and services broaden Jabil’s wallet per installation.
Physical AI and robotics	Pre-ramp 0-10%	Commercial deployment and unit economics remain early.

Stage percentages are qualitative framework bands relative to a possible mature opportunity, not measured market penetration. A current capacity constraint can coexist with a larger long-term TAM; qualification and economic capture decide how much reaches this company.

2. Forward TAM and capture

Jabil is an AI deployment beneficiary. It earns manufacturing and integration economics on delivered systems; it does not own the accelerator industry's full margin pool. The three-phase expansion lens remains: existing compute/network deployments; richer power/cooling/optical content; then physical AI and robotics. Thematic 100/50/20 weights are not extra haircuts on company guidance.

The company expects FY27 AI-related revenue of $22.1B, within $25.6B Intelligent Infrastructure revenue. FY26 AI-related revenue was about$14.4B. Compute, networking, power and cooling overlap that same envelope. Customer wins, Croatia, North Carolina, India and Hanley describe ways to deliver and capture that opportunity, not separate additive TAMs. Physical AI is modest in FY27; the current IDR growth path already includes a measured later recovery.

3. Reported earnings and formal guidance

September30 preliminary unaudited results: FY26 Q4(June-August) revenue$10,616M; GAAP gross profit$1,001M; GAAP OP$602M; core OP$675M; GAAP EPS$3.76; core EPS$4.40; diluted weighted-average shares106.0M. FY26 revenue$35,954M, core OP$2,069M and core EPS$13.09. Results exceeded the prior Q4 revenue$9,200-10,000M and core OP$589-649M guidance. [J7]

Core OP =602 GAAP +24 amortization +25 stock compensation +9 restructuring +5 pension/periodic benefit +10 acquisition/divestiture =675M. These exclusions are not all nonrecurring. The existing core-OP method is preserved and explicitly differs from GAAP, net income and free cash flow.

First Quarter FY27

Guidance

Segment Revenue Guidance	Q1 FY27E
Regulated Industries	$3.5B
Intelligent Infrastructure	$6.3B
Intelligent Devices & Robotics	$1.2B

Consolidated Guidance	Q1 FY27E
Net revenue	$10.6B - $11.4B
U.S. GAAP operating income	$481M - $541M
U.S. GAAP diluted earnings per share	$2.78 - $3.18
Core operating income (non-GAAP)[1]	$592M - $652M
Net interest expense[2]	$95M
Core tax rate (non-GAAP)[3]	20%
Core diluted earnings per share (non-GAAP)[1]	$3.80 - $4.20

[1] See U.S. GAAP to non-GAAP reconciliation on Form-8K filed on September 30, 2026.
[2] Net interest expense = interest expense, net + loss on sale of AR
[3] The core tax rate (non-GAAP) is a normalized annual income tax rate with regard to core earnings. See U.S. GAAP to non-GAAP definitions located at https://investors.jabil.com/

Jabil September30 presentation, page43: FY27 annual outlook.

FY27 revenue44,500M and core margin6.1% imply2,714.5M core OP. Core EPS17.55, adjusted FCF approximately1,600M, net capex1.5-2% of revenue, interest including receivables-sale expense390-400M, core tax20%. Forecast EPS embeds company capital/tax assumptions and is not used to backsolve a falsely precise guided share count.

The complete current call transcription supports45%/55% H1/H2 revenue, seasonally weaker Q2 and later profit conversion as capacity ramps. Networking alone grows45-50%, while combined Networking and Communications grows15%; the narrower number cannot be applied to all infrastructure. These call details are attributed to a third-party management transcription, reconciled with the issuer deck. [J8/J9]

4. Calibration and cost bridge

Diversification: The Foundation of a Balanced, Resilient Portfolio

$ in billions

	FY25	FY26	FY27E	FY27E Y/Y Var

Jabil September30 presentation, page42: segment revenues. The displayed segment margins are FY26, not FY27 guidance.

Fiscal FY27 control	Old model	Current guide/model
Revenue	42400	44500
AI-related revenue	20400	22100

Fiscal FY27 control	Old model	Current guide/model
Other infrastructure	3600	3500
Regulated	13000	13600
IDR	5400	5300
Core OP	2703.8	2714.5
Core OP margin	6.377%	6.100%
Operating-cost ratio assumption	3.600%	3.600%
Product GP proxy	4230.200	4316.5

FY27 revenue44,500 minus modeled production costs40,183.5 gives GP4,316.5; operating costs1,602 then give core OP2,714.5. The AI gross-margin proxy falls from10.8% to10.180995%; other infrastructure/Regulated/IDR retain8.5/9.5/9%. This is an explicit production-cost reconciliation, not disclosed product gross margins. Q1 AI GM9.272247% reconciles to622M core OP; Q2-Q4 AI GM10.477633% reconciles to the annual guide. Gross profit and cost allocations are estimates even when their total core OP is reported/guided.

The actual Q4 row allocates rounded Regulated3,400M and IDR1,400M, leaving exact consolidated-revenue residual5,816M for infrastructure. AI uses14.4/17.9 of that residual as an annual-mix proxy. Its estimated product GP is calibrated by operating costs to exact reported675M core OP; it is not presented as GAAP GP1,001M.

5. Summing thesis score

Category	Points / maximum	Evidence
Core Thesis	13/20	Sticky manufacturing qualifications and broader rack capabilities; customers retain substantial bargaining power.
Cycle	9/10	AI demand and capacity ramps support growth; there is no demonstrated industry-wide order suspension.
TAM	9/10	Compute, optics, power, cooling and regional manufacturing broaden content per deployment.
Catalysts	4/5	Third hyperscaler and new facilities; formal FY2027 guidance is now available; capacity execution remains ahead.
Macro	9/10	AI infrastructure demand, with cyclical consumer and automotive exposure.
Alpha	2/5	Improving mix and execution, but growth is already well publicized.
Risks	-5	Customer concentration, component availability, ramp costs, working capital and non-GAAP exclusions.

Sum: 41/60 × 100 = 68.333333%, conventionally rounded to 68%. This advisory thesis score does not replace any portfolio Base override. The separate risk classes below total the displayed deduction; holding status and classification do not waive that deduction.

6. Six mutually exclusive operating vectors

The existing fiscal mapping is preserved: model Q3 2026 = FY26 Q4(June-August); Q4 2026 = FY27 Q1(September-November); Q1/Q2/Q3 2027 = FY27 Q2/Q3/Q4. These labels are valuation buckets, not exact calendar revenue periods.

AI invoice mix remains65% compute/storage/racks,20% networking/optics/equipment,15% power/cooling/services. Relative AI gross margins remain aggregate minus1.5pp, plus1pp and plus5.166667pp. Qualified engineering and integration support the ordering; precise shares/margins are LOW-confidence assumptions. Direct materials, labor and manufacturing depreciation remain in production cost.

FY27 Q2 revenue=44,500×45%-11,000=9,025M. The remaining24,475M H2 is split25:28 using the old Q3/Q4 relative weights. After the Q1 segment guides, each vector's remaining annual revenue follows that residual cadence. FY28-30 preserve prior vector growth rates and23/24/25/28 fiscal weights. The annual AI GM correction carries forward; existing later margin increments and operating-cost rates3.4/3.2/3.1% remain. No extra capacity, acquisition, customer or power TAM is stacked on these totals.

V1. AI compute, storage and rack integration

Model quarter	Revenue	Gross margin proxy	Product GP
Q3 2026	3,041.216	9.500%	288.915
Q4 2026	3,535.137	7.772%	274.760

8. Valuation, debt and dilution

The active multiple is 20x rolling forward-four-quarter core OP, authorized by the user on 1 October 2026. The prior 16x multiple is superseded. Revenue, gross profit, operating expenses, core OP, forward earnings windows and the 106.0M diluted-share proxy are unchanged; the multiple change alone raises every ceiling by 25%. It values manufacturing operating economics before interest and tax. It is not a price/earnings multiple. The ceiling quarter's share proxy is106.0M(latest diluted average), held constant; future repurchases and awards are uncertain. Rounded period-end104M shares is a different measure. The July$1.5B buyback authorization has about$1.4B remaining, but no further reduction is booked without an execution/award bridge.

August31 cash1,739M; current/long debt499/2,880M: total3,379M and net debt1,640M excluding641M operating leases. Inventory7,413M, receivables6,513M and payables14,444M show material working-capital exposure. FY26 operating cash flow2,002M minus gross capex628M plus property-sale proceeds/advances158M equals adjusted FCF1,532M. None is added to or subtracted from the existing OP ceiling. Customer deposits can improve cash timing without being operating revenue. [J7/J8]

9. Rolling forward-four-quarter ceilings

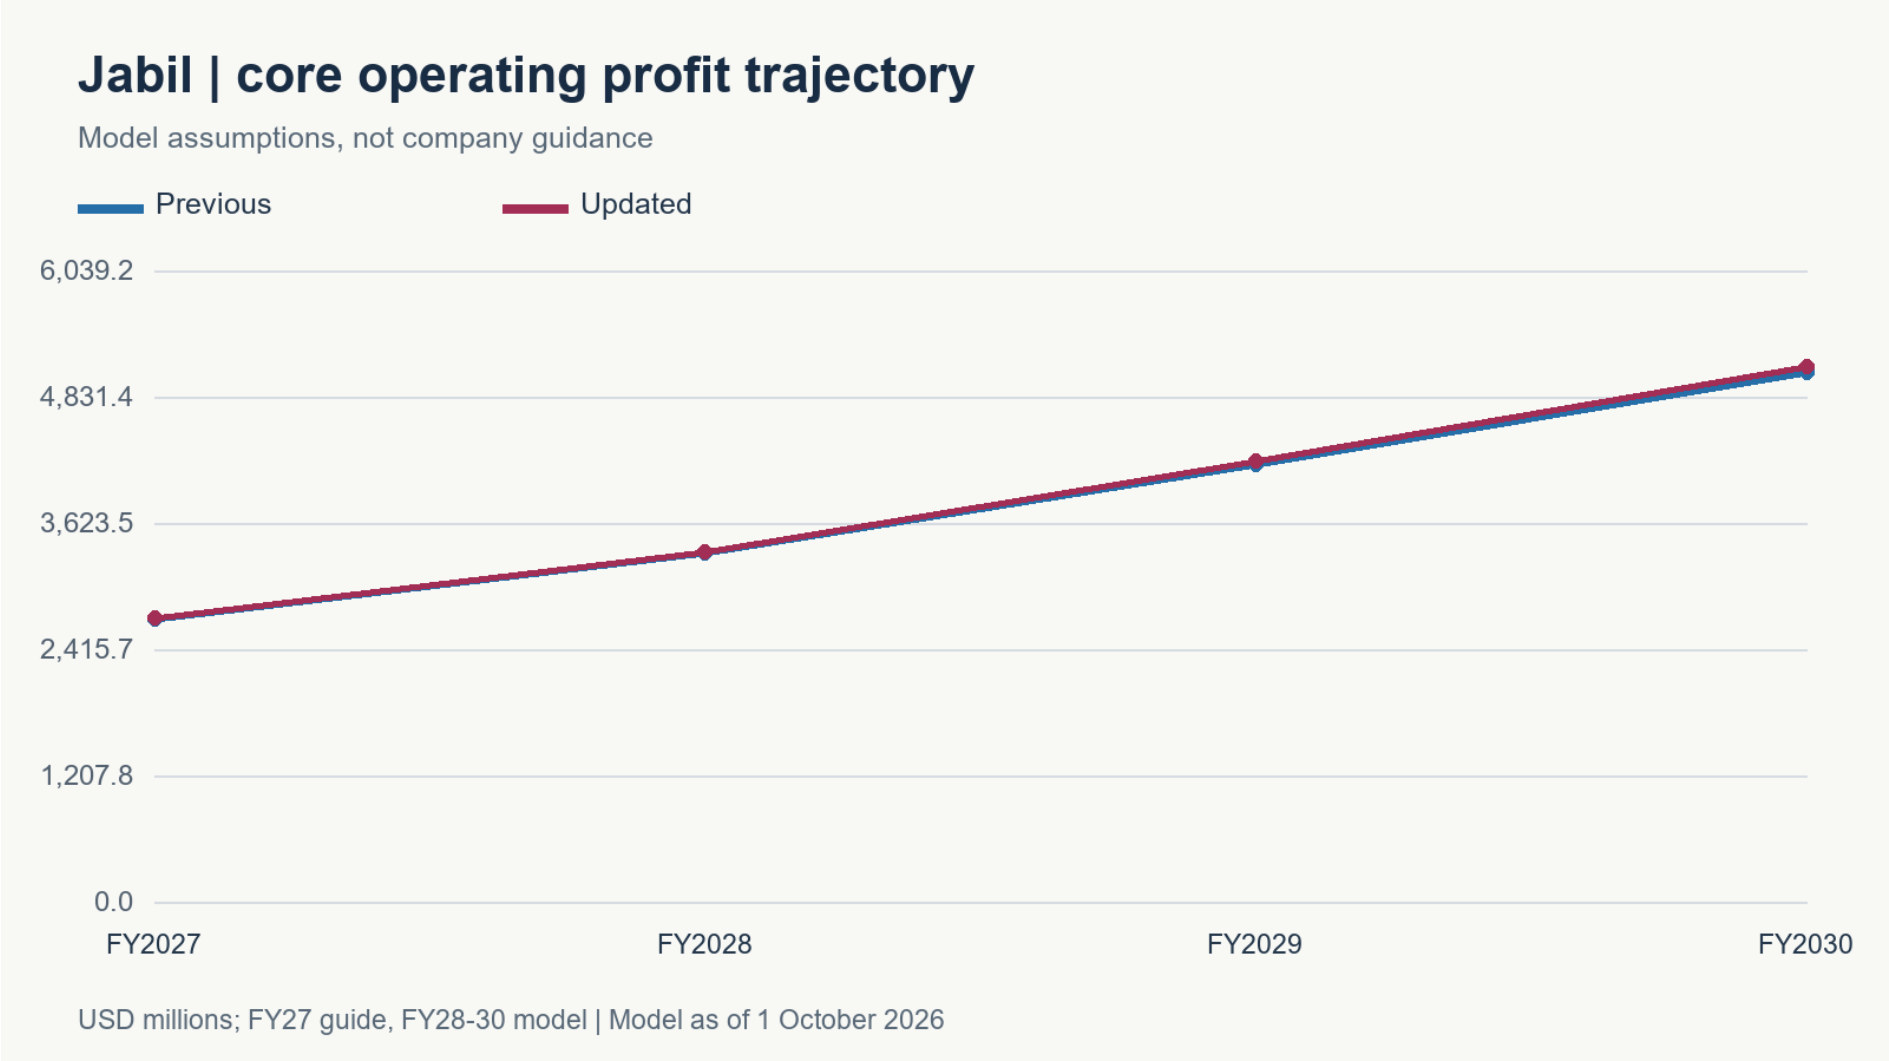

Jabil | 20x active ceiling path. USD per share; same forecasts and 106.0M shares. The prior 16x series is dated 1 October 2026 and superseded. The multiple revision alone increases all ceilings 25%.

Ceiling quarter	Model OP window	F4Q core OP	Multiple	Shares M	Ceiling USD	Prior 16x USD (1 Oct; superseded)
Q3 2026	Q3 2026 to Q2 2027	2,581.845677	20x	106.0	487.140694	389.712555
Q4 2026	Q4 2026 to Q3 2027	2,714.500000	20x	106.0	512.169811	409.735849
Q1 2027	Q1 2027 to Q4 2027	2,862.527117	20x	106.0	540.099456	432.079565
Q2 2027	Q2 2027 to Q1 2028	3,102.307928	20x	106.0	585.341119	468.272895
Q3 2027	Q3 2027 to Q2 2028	3,218.173995	20x	106.0	607.202640	485.762112

Q1 2028	Q1 2028 to Q4 2028	3,547.277186	20x	106.0	669.297582	535.438066
Q2 2028	Q2 2028 to Q1 2029	3,755.277044	20x	106.0	708.542839	566.834271
Q3 2028	Q3 2028 to Q2 2029	3,971.943563	20x	106.0	749.423314	599.538651
Q4 2028	Q4 2028 to Q3 2029	4,214.610064	20x	106.0	795.209446	636.167557
Q1 2029	Q1 2029 to Q4 2029	4,422.380782	20x	106.0	834.411468	667.529175
Q2 2029	Q2 2029 to Q1 2030	4,639.185009	20x	106.0	875.317926	700.254341
Q3 2029	Q3 2029 to Q2 2030	4,865.022746	20x	106.0	917.928820	734.343056
Q4 2029	Q4 2029 to Q3 2030	5,117.961011	20x	106.0	965.653021	772.522417
Q1 2030	Q1 2030 to Q4 2030	5,229.576118	20x	106.0	986.712475	789.369980

Active Q4 2027: (770.027117 + 803.506557 + 836.985997 + 937.424317) x20 /106 = **$631.687545**. This prices the same FY28 fiscal operating window as before. At the superseded 16x multiple immediately before the 1 October 2026 revision, the same forecast produced $505.350036; the increase is exactly 25.00%. No operating forecast, share-count or horizon-roll effect is included in this comparison.

10. Fiscal annual trajectory and cost cross-check

Jabil | core operating profit trajectory. USD millions; FY27 guide, FY28-30 model. Model assumptions, not company guidance

Fiscal year	Revenue	Product GP	Operating costs	Core OP	Core margin
FY2027	44,500.000	4,316.500	1,602.000	2,714.500	6.100%
FY2028	51,751.225	5,107.486	1,759.542	3,347.944	6.469%

Fiscal year	Revenue	Product GP	Operating costs	Core OP	Core margin
FY2029	60,056.774	6,136.427	1,921.817	4,214.610	7.018%
FY2030	68,362.322	7,237.193	2,119.232	5,117.961	7.487%

These fiscal sums match the underlying fiscal quarters. Calendar-labeled buckets are not silently presented as calendar fiscal results. FY28+ is conditional and increasingly uncertain.

11. Sensitivities at active Q4 2027

One change; other inputs fixed	Ceiling USD	Meaning
Current	631.688	20x, 106M shares
5% fewer shares	664.934	No additional buyback assumed in main model
5% more shares	601.607	Award/issuance sensitivity
FY28 AI gross margin 1pp lower	577.480	Production-cost sensitivity
FY28 AI gross margin 1pp higher	685.895	Not a multiple change

All sensitivities use the current 20x multiple and the same forward window. A 1pp AI gross-margin change applies to FY28 AI revenue of $28,730M: 28,730 x1% x20 /106 = $54.207547 per share.

12. Probability and overlap ledger

Signal	Probability / amount	Active contribution and overlap	Revision trigger
Formal FY27 total/segment outlook	Current guidance is the 100% adopted central input, not a claim of certain delivery;44.5B revenue/6.1% core margin	Replaces42.4B/6.377%; no second probability multiplier or extra capacity layer	Next guidance, component delivery, utilization and core margin
AI customer ramps	80% continuation confidence retained; FY27 AI22.1B is inside guidance	Prior third-hyperscaler/India/Hanley signals already sit in AI; incremental stand-alone contribution0 to avoid duplication	Separate contracted revenue beyond the included envelope
FY28+ expansion	LOW-confidence model; prior AI growth30/25/20% retained	Higher FY27 revenue and revised production cost propagate; probabilities describe inherited model confidence rather than a new extra uplift	Shipment acceptance, yield, staffing and customer budgets
Physical AI/robotics	35% material-scale confidence	Existing IDR later growth already supplies a bounded proxy; additional revenue0 because current commentary says modest FY27 and provides no independent increment	Deployment volumes or changed IDR outlook
Buybacks	80% execution confidence of remaining authorization	Latest actual diluted proxy106M included; extra benefit0 because future net awards, executed price and timing not sized; ±5% diagnostic above	Updated diluted share count and executions

Probabilities are judgments, not official facts. Zero increments above follow identified overlap/measurement gaps, not a requirement to wait for official confirmation. A new non-overlapping, quantifiable breadcrumb can affect operating assumptions before confirmation. Excel Base is never used as a transaction probability.

13. Scored risk classes

Risk class	Scored deduction	Mechanism and consequence
Customers and competition	-1	Large customers can reprice, insource or shift programmes to other manufacturers.
Component availability	-1	Memory and high-density PCBs can block shipment of otherwise complete systems.
Facility ramps	-1	Qualification, staffing and underutilization can defer expected margin improvements.
Working capital	-1	Receivables and inventory consume cash before customers pay.
Adjusted economics	-1	Core OP excludes recurring SBC and other costs; repurchases compete with investment needs.

14. Catalysts and falsifiers

Next FY27 Q1 release: compare11.0B midpoint revenue and622M core OP; track component availability and Q2 seasonality. Through FY27: test45/55 H1/H2 revenue, facility acceptance and margin conversion. August2027: compare44.5B revenue/6.1% margin/22.1B AI and1.6B FCF. FY28: Croatia utilization, power/cooling attach and customer diversification test the conditional growth. Net inventory days64 versus target55-60 and rising gross working-capital dollars are cash-risk checkpoints. Authorizations are checked against actual buybacks and awards.

15. Cross-book monitoring

Credo/Marvell connectivity, ASE packaging and Jabil integration address different portions of the same deployment. Their revenues are not additive measures of end-customer capex. Optical partnerships can support a route to market without proving exclusivity or a separately additive TAM. India and the third hyperscaler expand capture within the AI vector. Read-throughs to individual foundries or laser suppliers require a company-specific sourcing probability and economic bridge; ecosystem compatibility does not prove sole sourcing. A larger module wallet can benefit several suppliers but each company records its own external invoice.

16. Sources and remaining uncertainty

- J7: September30 issuer release, preliminary unaudited actuals, GAAP/core bridge, balance sheet and Q1 guidance.
- SEC furnished release, corresponding8-K exhibit.
- J8: September30 issuer-authored presentation, public archive copy, pages11-12,39-45. Source exhibits embedded at point of use.
- J9: full current management call transcription, Quartr transcription; AI revenue, timing and qualitative ramps checked against the deck.
- J1/J2: prior June17 issuer release, historical comparison only; superseded guidance is not active.
- J3: June17 management call and J4: March18 call, background customer/mix evidence.
- J6: July15 buyback authorization.

The FY26 10-K and an issuer-hosted current transcript were not retrieved. Product sales/margins, exact future diluted shares and FY28+ rates remain modeled. Reported issuer results are HIGH confidence subject to preliminary status; guide totals MEDIUM; product allocations and outer years LOW. Current files: JBL_Jabil_DeepDive.md/.pdf and master JBL_Q_Model. Prior copies are recoverable in the dated versions folder.
