NRGV - Energy Vault Holdings | Full investment artifact

Full active edition | Financial methods and portfolio Base overrides preserved.

Research date: 30 September 2026 | **Framework:** 8.0 consolidated | **Format:** standalone current-state analysis **Status:** Full Framework 8.0 artifact; Goshe acquisition and generation procurement integrated | **Classification:** TEMPORAL BENEFICIARY - integrated power delivery and developing owned-asset platform **Artifact Base:** 36/60 = **60% - Fail** | **Protected portfolio Base:** 57% (user override retained; separate from artifact assessment) **Snapshot:** supplied-workbook price USD 3.490; model share proxy 275.000000M; implied snapshot market capitalization 959.750 USD millions. Price is frozen from the supplied workbook, not a current-market refresh; capitalization uses the modeled denominator. **Active ceiling:** Q3 2027 **USD 4.323616**, pricing Q3 2027-Q2 2028. All 15 quarterly ceilings are derived below.

The September 22 Goshe acquisition adds a probability-weighted operating contribution from Q1 2028. The active Q3 2027 ceiling rises from USD 4.080536 to USD 4.323616 (+5.96%) on the same share basis and earnings window. The 275 MW 2G equipment order supports execution but is not a second customer revenue award. Share dilution and senior funding claims materially constrain how much of that opportunity belongs to common shareholders. Workbook Base remains protected.

1. Supercycle, supply chain and durable advantage

Power scarcity and interconnection delays support demand for integrated storage, generation and control software. Energy Vault has converted that demand into a large signed AI infrastructure contract while developing a recurring asset business. Execution and financing capability can differentiate its service, but batteries and generation equipment remain competitive. Owned-asset project returns must be translated through depreciation, financing and preferred claims before attributing value to common shareholders.

Battery and engine manufacturers → Energy Vault engineering, controls and integration → third-party customers or owned sites → utilities and data-center operators. Caterpillar generation equipment is supplied within an unnamed EPC relationship; the hyperscaler identity is not inferred. Crusoe powered shells are a separate owned-project stream, not the1.25GW construction contract.

Business / curve	Stage	Evidence and next inflection
BESS deployment	Commercial and competitive	Execution matters more than exclusive battery technology.
AI integrated power	Early repeatable platform	Large first contract supports revenue, but subsequent awards remain uncertain.
Owned storage/powered sites	Early operating transition	Most controlledMW are not yet revenue-producing.

Stage percentages are qualitative framework bands relative to a possible mature opportunity, not measured market penetration. A current capacity constraint can coexist with a larger long-term TAM; qualification and economic capture decide how much reaches this company.

2. Forward TAM and the three-phase expansion lens

Phase	Engineering opportunity	Demand-to-company bridge
2026-27 /100% thematic weight	Signed power-delivery and storage work	500-600M AI contract supports specific eligible revenue; whole hyperscaler capex is not the addressable share.
2028-29 /50% thematic weight	Asset commissioning and recurring receipts	Latest target: over USD 200M annual project EBITDA at the end of 2028. Operating, construction and development capacity remain different stages; funding and commissioning are required. [S10]
2030+ /20% thematic weight	Larger multi-GW platform	Management illustration approaches5GW and2B annualized EBITDA; uncontracted, highly capital-dependent potential, excluded as a direct earnings input.

The 100% / 50% / 20% thematic weights guide thesis assessment. They are not blanket discounts to reported sales, contracts or all forecasts. Programme probabilities below govern only separately identified optionality. Current reported sales calibrate the starting point; they do not cap the future market.

3. Current earnings and management evidence

Q2 revenue17.369M USD, GP5.376M, operating expenses30.035M and operating loss24.659M. H1 revenue39.248M, GP10.164M and operating loss48.860M. August guidance raised2026 revenue to270-310M and GAAP GM to20-25%. Model290M: H1 actual39.248M plusH2 250.752M, with most recognition inQ4. Cash148M includes54.978M restricted cash; cash growth is partly financing rather than operating profit. [S1/S2]

Reviewed full May5 and August11 prepared remarks and Q&A. May distinguished internal builds from revenue and guided existing projects toward180M annualized project EBITDA around2028/early2029. August identified the1.25GW arrangement as build-and-transfer, with most500-600M revenue in2027, and explained that roughly60% of backlog is multiyear owned-asset revenue. Project-financing negotiations remained ongoing for some assets. [S3/S4]

The two full earnings calls were reviewed. Latest September conference transcript was not located; the September1 project designation is included as an early milestone only. Contract counterparty identity, complete project budgets, future funding draws and quarterly owned-asset margin splits remain unavailable and are modeled explicitly atLOW confidence.

September 30 update: Goshe and generation supply

Reported evidence [S10]: The September 22 acquisition adds 15 U.S. BESS development projects totaling over 2.3 GW. Only two projects, 150 MW and 200 MW, are ready to build. Management targets commercial operation in Q1 2028 and approximately USD 30M combined annual project EBITDA. The S2G facility is a commitment of up to USD 40M, not reported cash already drawn. Neither the purchase consideration nor complete construction financing, project MWh, power contracts or depreciation schedules were disclosed in the release. The latest Asset Vault target is over USD 200M annualized project EBITDA at the end of 2028, superseding the earlier 180M goal as the current target.

Probabilistic transmission: Assign 70% realization to the two ready-to-build projects. Acquisition and a dated commissioning objective support a material probability; funding, construction, power-market capture and commissioning prevent certainty. This is a subjective analyst probability, not an issuer statistic. At the retained 70% project cash margin proxy, USD 30M conditional annual EBITDA implies USD 42.857M conditional annual revenue. The weighted annual revenue is USD 30M. Model half of Q1 2028, then full quarters. Retain product GP margins of 55% in 2028 and 57% thereafter, including depreciation. Add corporate integration cost equal to 10%

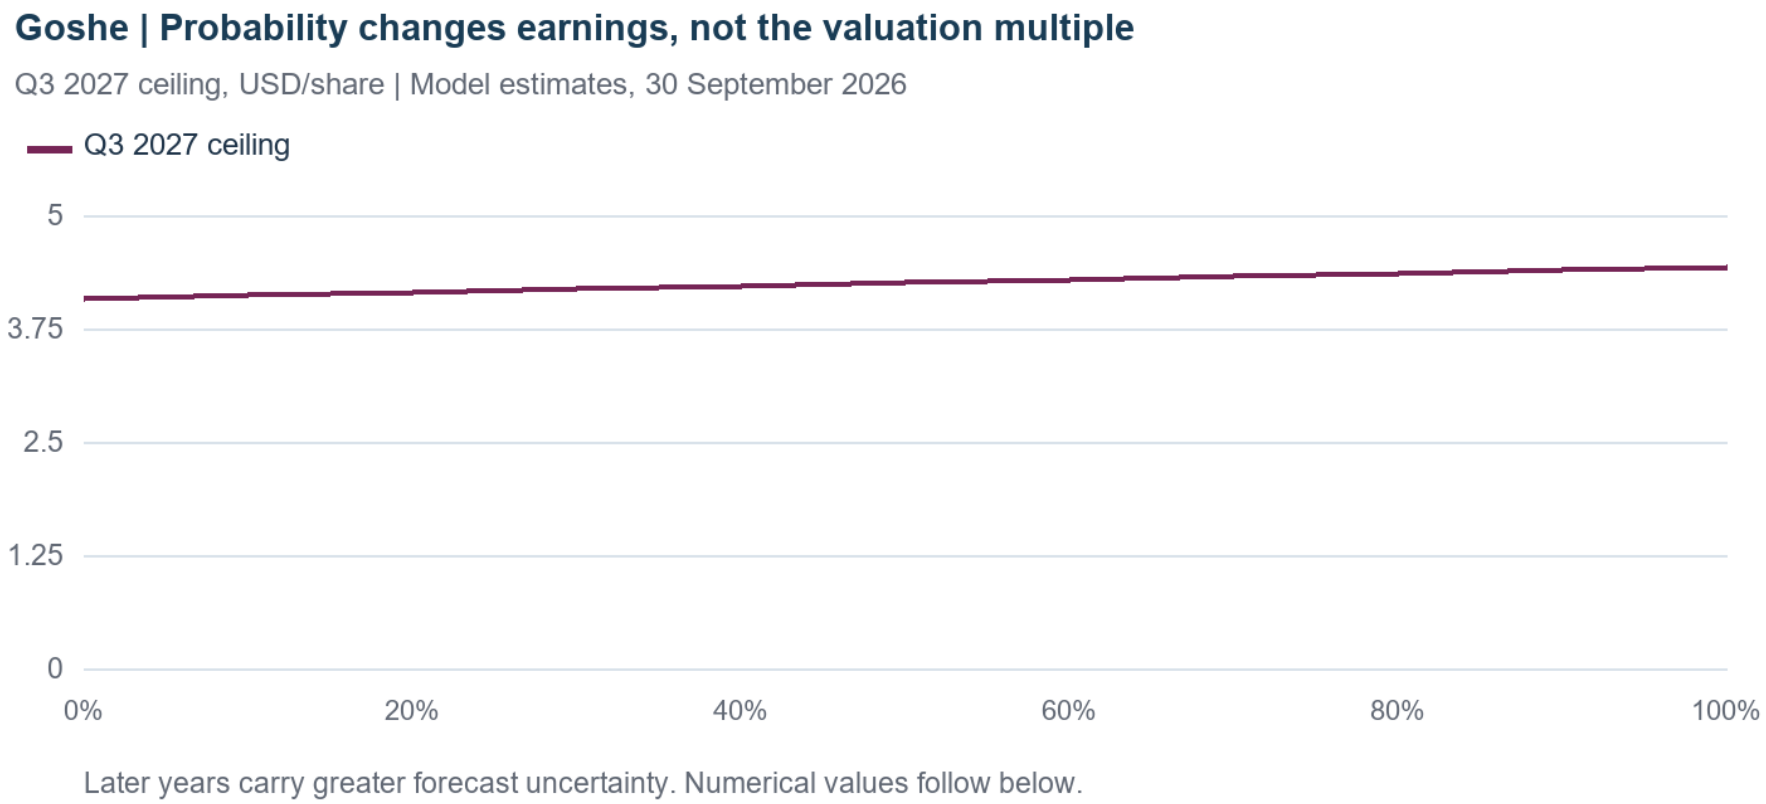

of the incremental revenue. The incremental financing allowance assumes a 50% draw on the USD 40M commitment at a 10% annual cost, weighted by the same probability. All are explicit LOW-confidence inputs; actual draw, interest, capex and depreciation will replace them as evidence develops. Existing share allowances remain unchanged, not because financing is free, but because the authorized share convention is retained while the directly associated financing cost is exposed separately.

Overlap: The reference model predates the acquisition and contains no Goshe-specific allocation. Q4 2028 reference owned revenue annualized at the 70% cash margin gives 178.64M project cash contribution. Add 21M probability-weighted Goshe EBITDA to get 199.64M, near the new 200M+ exit goal. Do not add that goal again. Assign 25% longer-term conversion confidence to the remaining 13 development projects as a watch judgment; their approximately 1.95+ GW has no disclosed revenue/MW or commissioning schedule. Applying the ready-to-build EBITDA/MW ratio would imply about 167M conditional annual project EBITDA, or 42M weighted, but assumes identical project duration, economics and funding. That gross proxy is not incremental to the existing 2029-30 unnamed owned growth. Keep it inside that allowance, with zero separate addition until a distinct project allocation or schedule replaces the overlap.

2G procurement [S8/S9/S11]: The September 23 supplier release describes a 275 MW order with deliveries in Q4 2027-Q3 2028. This is equipment bought by NRGV, not customer revenue earned by NRGV. The September 10 Rolls-Royce MTU financing release concerns another named 275 MW procurement; the two suppliers' tranches and financing cannot be presumed identical or simply added into a funded 550 MW customer award. The Q2 10-Q Note 20 describes the earlier 2G reservation and deposits; preserve that dated distinction from the subsequent order release. September 25 Parmantier commentary questions binding terms and payment visibility. Its critique is counter-evidence, not a reason to import its price target.

For a bounded 2G scenario, use 50% commercial realization and the existing 0.44M delivery-revenue/MW proxy: 275 MW x 0.44M = 121M conditional, 60.5M probability-weighted. That fits within the existing 250M 2028 repeat-project allowance, producing zero net incremental sales. This proxy assumes a delivery-style commercialization, not equipment-purchase accounting. An owned-power route would require a separate operating/funding allocation, replacing rather than stacking the same capacity.

Triggers: Increase Goshe realization on construction funding, notice to proceed and dated commissioning milestones; reduce it or shift timing on delays, expensive capital, lower PPA economics or further common issuance. Reconcile 2G and MTU order terms, customer offtake and project assignments before reallocating the existing repeat-order pool. Official confirmation is not required to price a breadcrumb; incremental economics and overlap must be explicit.

Goshe | Probability changes earnings, not the valuation multiple

Realization probability	Q3 2027 ceiling USD
0%	4.080536
35%	4.202076
70%	4.323616
100%	4.427793

Goshe bridge, USD M	Q1 2028	Each Q2-Q4 2028	FY 2028
Weighted revenue	3.750	7.500	26.250

Goshe bridge, USD M	Q1 2028	Each Q2-Q4 2028	FY 2028
Product GP after depreciation	2.063	4.125	14.438
Corporate integration cost	0.375	0.750	2.625
Incremental consolidated OP	1.688	3.375	11.813
Financing allowance	0.175	0.350	1.225
Economic OP to common proxy	1.513	3.025	10.588

Q3 2027's earnings window contains Q1 and Q2 2028. The incremental economic OP is 4.5375M, giving 4.5375 x 15 / 280 = USD 0.243080 per share. Turning the Goshe probability to zero restores all 15 reference ceilings exactly.

4. Local evidence and calibration packet

AH12 demand calibration uses named project capacity and contractual delivery value, because the unnamed hyperscaler purchase budget and account capture are unavailable. The1.25GW contract midpoint550M implies0.44M of Energy Vault delivery revenue perMW; it is NOT total site capex. Model150M inQ426 plus400M2027 =550M. Legacy EPC2027 240M plusAI400M totals640M, above the residual of roughly700-800M near-term backlog afterH226 deliveries; about80-180M of incremental awards or timing differences is therefore required, a clear LOW-confidence conversion assumption rather than a claimed backlog-only forecast. For2028 AI550M =500M disclosed advanced-negotiation pool×60% conversion +250M repeat-order proxy; later660/800M requires approximately1,500/1,818MW-equivalent at0.44M/MW. The repeat-order amount and conversion probability are LOW assumptions. Legacy EPC annual240/300/330/360M reflects external delivery capacity, excluding75-100M internal builds previously discussed. Owned operating revenue120/220/300/420M2027-30 at70% illustrative cash margin gives84/154/210/294M project cash contribution before corporate costs;2028 approaches, but does not automatically equal, the180M future run-rate target. No full180M is treated as current earnings.

5. Summing thesis score

Category	Points / maximum	Evidence
Core Thesis	10/20	Integrated execution and software add value; competitive hardware and capital dependence.
Cycle Stage	8/10	Signed AI contract materially improves near-term revenue visibility.
TAM	8/10	Storage and power shortages create large demand, constrained by funded projects.
Catalysts	4/5	Q4 delivery ramp and first powered-shell operations.
Macro	8/10	AI power demand supports multi-year deployments.
Alpha	3/5	Separation of project and parent economics is essential.
Risks	-5	Five distinct material risk classes.

Sum: 36/60 × 100 = 60.000000%, conventionally rounded to 60%. This advisory thesis score does not replace any portfolio Base override. The separate risk classes below total the displayed deduction; holding status and classification do not waive that deduction.

6. Revenue sources, capture and product margins

Three distinct external revenue streams: legacy EPC/services, AI build-and-transfer, and operating receipts from owned assets. Internal Asset Vault construction is eliminated. Product GP retains depreciation; corporate expenses retain normal SBC. A separately disclosed senior-claim allowance converts consolidated OP to an economic earnings proxy for common holders.

Vector	Actual calibration / source	Forward demand and capture	Margin derivation / constraint
Legacy EPC/services	Q2 approximately14M allocation	H2 91.752M; then240/300/330/360M.	23% GAAP-like GM including warranty costs.
AI delivery	1M modeling scale unit; no separate Q2 reported segment	150M Q426;400M2027;550/660/800M thereafter.	24% H2,25% later; within disclosed delivery economics.
Owned operations	Q2 3.369M estimated residual	H2 9M;120/246.25/330/450M annually, including probability-weighted Goshe from Q1 2028.	42% H2,50/55/57/57% annually after depreciation; not70-80% cash margin.

Confidence: reported historical totals are HIGH. Source-based forward extrapolations are MEDIUM only where the cited source sizes the relevant period; other product allocations, future capture and margin assumptions are LOW. A source for the historical anchor does not make an unsourced future factor management guidance. The detailed factors below are the single modeled base case, with uncertain assumptions exposed for review.

V1. Third-party BESS construction and services

Sources: S1/S2 existing EPC business and near-term backlog. Revenue = anchor × factor; GP/contribution = revenue × displayed product margin. Forecast confidence: LOW unless a specific actual/guided total is identified above.

Quarter	Revenue anchor	Demand / conversion factor	Revenue	Product margin	GP / contribution

Q3 2030	Model	429.900	142.875	11.107%	47.750	22.127%	95.125	Goshe + Funding and retained equity	LOW model
Q4 2030	Model	512.100	167.025	9.910%	50.750	22.706%	116.275	Goshe + Sustained operating conversion	LOW model

OP = sum of product GP/contribution - explicit operating costs. OP margin = OP ÷ revenue. Displayed numbers are rounded for reading; the workbook calculates from unrounded inputs. Guidance assigned to a future quarter retains Model status because guidance is not an actual result.

NRGV | Converting product profit to common economic earnings

Year	Product GP	Corporate opex	Consolidated OP	Senior claims	Economic OP
2027	215.200	125.000	90.200	40.000	50.200
2028	341.938	147.625	194.312	61.225	133.088
2029	429.000	168.000	261.000	81.400	179.600
2030	539.300	188.000	351.300	101.400	249.900

8. Multiple, shares and recognition convention

Retain15× economic forward operating earnings, reflecting competitive infrastructure execution and financing risk. The latest 200M+ project EBITDA goal is not consolidated operating profit or common-holder earnings. Retain the existing conversion through depreciation, corporate costs and senior capital claims.

August6 common shares181.839570M. June excluded equivalents87.907M comprise warrants8.167M, options9.041M, RSUs19.949M, senior converts28.977M and variable-price debentures21.773M. Gross sum269.746570M; use275M H2 and280/290/300/310M annually for awards/funding. This is a conservative gross conversion proxy with potential exercise overlap, not GAAP EPS dilution. Capped calls can offset some senior-note dilution up to their cap, but variable-price debt and future issuance remain risks; no fixed180M denominator is retained.

The valuation denominator is the ceiling quarter's diluted-share proxy. It is not a historical EPS weighted-average assumption disguised as a fully known future capitalization. Unit factor: 1; this converts the model units to USD per share. No cash balance, enterprise-value adjustment or after-tax earnings substitution is added to the operating-profit ceiling.

Minority earnings allocation

This model uses the economic-claim adjustment field for preferred returns plus project-financing cost, rather than pretending all consolidated OP belongs to common holders. Subtract5M/qH2 then40/60/80/100M annually2027-30. Annual decomposition: preferred/equity-partner allowance12/24/36/40M plus non-converted project-financing allowance28/36/44/60M. Preferred12% on assumed drawn100/200/300M explains the first three annual allowances; terminal40M also allows accretion/partner costs. These are explicit estimates, not current draws or reported minority OP. Corporate converts are instead modeled as fully diluted shares, so their cash interest is not double-counted here. H1 actual preferred PIK2.172M and redemption accretion2.423M demonstrate real capital claims despite noGAAP minority net-income allocation. The waterfall, principal redemption and taxes are more complex than this proxy; it is a framework ceiling, not a distributable-cash valuation.

Quarter	Consolidated operating profit	Senior claims allowance	Parent economic OP proxy

- **Q3 2026:** (-29.870000 + 16.752960 + 3.536000 + 9.544000) x 15 / 275.000 = **-0.002020 USD/share**.
- **Q4 2026:** (16.752960 + 3.536000 + 9.544000 + 14.504000) x 15 / 275.000 = **2.418380 USD/share**.
- **Q1 2027:** (3.536000 + 9.544000 + 14.504000 + 22.616000) x 15 / 280.000 = **2.689286 USD/share**.
- **Q2 2027:** (9.544000 + 14.504000 + 22.616000 + 16.092500) x 15 / 280.000 = **3.361955 USD/share**.
- **Q3 2027:** (14.504000 + 22.616000 + 16.092500 + 27.495000) x 15 / 280.000 = **4.323616 USD/share**.
- **Q4 2027:** (22.616000 + 16.092500 + 27.495000 + 38.240000) x 15 / 280.000 = **5.595187 USD/share**.
- **Q1 2028:** (16.092500 + 27.495000 + 38.240000 + 51.260000) x 15 / 290.000 = **6.883836 USD/share**.
- **Q2 2028:** (27.495000 + 38.240000 + 51.260000 + 24.447000) x 15 / 290.000 = **7.315966 USD/share**.
- **Q3 2028:** (38.240000 + 51.260000 + 24.447000 + 37.213000) x 15 / 290.000 = **7.818621 USD/share**.
- **Q4 2028:** (51.260000 + 24.447000 + 37.213000 + 50.678000) x 15 / 290.000 = **8.461966 USD/share**.
- **Q1 2029:** (24.447000 + 37.213000 + 50.678000 + 67.262000) x 15 / 300.000 = **8.980000 USD/share**.
- **Q2 2029:** (37.213000 + 50.678000 + 67.262000 + 36.353000) x 15 / 300.000 = **9.575300 USD/share**.
- **Q3 2029:** (50.678000 + 67.262000 + 36.353000 + 52.847000) x 15 / 300.000 = **10.357000 USD/share**.
- **Q4 2029:** (67.262000 + 36.353000 + 52.847000 + 69.775000) x 15 / 300.000 = **11.311850 USD/share**.
- **Q1 2030:** (36.353000 + 52.847000 + 69.775000 + 90.925000) x 15 / 310.000 = **12.091935 USD/share**.

The earliest negative arithmetic output is retained to preserve the method. It signals an earnings-based valuation is not meaningful in that loss window; it is not a prediction of a negative tradable share price.

10. Annual trajectory cross-check

NRGV | External revenue mix, excluding internal construction

Year	Legacy EPC	AI delivery	Reference owned	Goshe weighted
2027	240.000	400.000	120.000	0.000
2028	300.000	550.000	220.000	26.250
2029	330.000	660.000	300.000	30.000
2030	360.000	800.000	420.000	30.000

Calendar year	Revenue	GP / contribution	Opex	OP	OP margin
2027	760.000	215.200	125.000	90.200	11.868%
2028	1,096.250	341.938	147.625	194.312	17.725%
2029	1,320.000	429.000	168.000	261.000	19.773%
2030	1,610.000	539.300	188.000	351.300	21.820%

These are calendar-year sums of the quarterly path, not extra revenue and not the live valuation method. For non-December fiscal reporters, fiscal guidance and these calendar totals must be aligned using the period mapping above; a four-quarter run rate is not automatically the same fiscal year. Outer-year outputs are conditional TAM/capture trajectories, not verified management sales targets.

2027-30 consolidated revenue760/1070/1290/1580M. Owned assets contribute120/220/300/420M within those totals. Gross profit to corporate OP and then senior-claim-adjusted earnings are displayed separately. Changing asset funding assumptions materially changes per-share ceilings even when operatingMW and project EBITDA stay constant.

11. Dilution sensitivity - same operating case

Denominator sensitivity	Q3 2027 shares M	Q3 2027 ceiling USD	Effect on ceiling
-5% shares	266.000	4.551175	+5.26%
+0% shares	280.000	4.323616	+0.00%
+5% shares	294.000	4.117730	-4.76%
+10% shares	308.000	3.930560	-9.09%

This isolates denominator uncertainty; it is not a second bull/bear operating case or permission to remove known dilution. The base case remains the explicit share path in the rolling table.

12. Programme and probability ledger

Programme / signal	Source and probability	Amount / unit base	Treatment in this model	Escalation / recognition
1.25GW delivery contract	Signed;85% timing confidence	500-600M through2027	550M split150/400M; no separate GW-times-TAM add-on	Milestones and customer acceptance.
Current backlog	Reported composition	Approximately2B,60%long-term/40%near-term	Recognize over each contract duration, not all in one year	Remove canceled options and distinguish contingent backlog.
Japan portfolio	Acquired;65% schedule confidence	850MW total;350MW advanced	First commercial activity modeled frommid2028	NTP expectedH227, finance and permits.
Crusoe Snyder	Contracted initial phase;75% schedule confidence	8MW H127;25MW later potential	Included owned revenue	500MW site potential is not contracted capacity.
Powered land	Development;65% conversion confidence	75MW initial; larger stages under study	Included owned revenue; no separate65M EBITDA addition	Offtake, interconnect and project financing.
Sardinia	Strategic designation; early development	100MW site headline	Zero separately attributed revenue	Funding, permits, offtake and phasedIT load.
Generation financing	Executed facility	137.5M equipment facility	Interest/claims allowance and refinancing risk	January2028 maturity; draws and covenant compliance.
Sodium-ion/gravity licensing	Commercial options; unquantified	No distinct incremental forecast	Within relevant delivery lines only	Awarded profitable external orders.

Probabilities are analyst judgments under the framework signal hierarchy. Embedded revenue is not multiplied or added a second time. Where no defensible amount or unit base exists, the opportunity remains explicitly unquantified; confidence alone cannot create a revenue number. New evidence can enlarge the TAM, improve capture or move recognition earlier, but each requires an identifiable model input.

Current explicit additions to the programme ledger: Goshe ready-to-build realization 70%; remaining development conversion 25% watch probability with overlap exclusion; 2G commercial realization 50% with the weighted delivery-equivalent already inside the repeat-order allowance. These judgments affect the specified inputs only.

13. Scored risk classes

Risk class	Scored deduction	Mechanism and consequence
Funding	-1	Debt, preferred returns and refinancing can absorb project economics.
Execution	-1	Milestones, interconnection, equipment supply and commissioning can slip.
Competitive	-1	Battery and generation alternatives constrain durable pricing.
Demand	-1	Merchant power prices and customer projects may weaken.
Dilution/governance	-1	Converts, awards and variable-price financing expand the denominator.

14. Dated catalysts, counters and escalation

1. **Q4 2026 - Large revenue concentration** Check delivery milestones versus cash collections and warranty reserve.
2. **Next earnings,November expected - 2027 outlook** Reconcile550M contract conversion and recurring asset timing.
3. **H1 2027 - Crusoe8MW and powered land** Confirm commissioned capacity and offtake revenue.
4. **2027-28 - Japan financing andCOD** Delay recurring revenue ifNTP/interconnect slips.
5. **January2028 - Equipment-facility maturity** Track refinancing and restricted cash.
6. **Every filing - Funding waterfall and shares** Refresh preferred draws, debt conversions, awards and common economic share.

15. Cross-book monitoring

Energy Vault can benefit from the same power shortage as BE and other electrical infrastructure names while serving a distinct integration and asset-ownership role. StorageMW, storageMWh, engineMW andIT-loadMW are different measures. Their total project values and customer budgets cannot be summed as incremental demand for every supplier.

16. Source register and model limits

S1 - Issuer Q2 release (2026-08-11). Actuals, raised guidance, contract value, backlog composition and asset timing.

S2 - Q2 Form10-Q (2026-08). Debt, restricted cash, dilution, operating expenses and preferred waterfall.

S3 - Full Q1 call (2026-05-05). Management commentary and complete Q&A.

S4 - Full Q2 call (2026-08-11). Complete management transcript reproduced from Motley Fool; cross-checked to SEC release.

S5 - Generation-equipment financing8-K (2026-08-14). 137.5M senior secured facility; maturityJanuary2,2028 and restricted distributions.

S6 - Issuer Sardinia announcement listing (2026-09-01). 100MW project receives strategic designation; not operating capacity.

S7 - 2025 Form10-K preferred terms (2026-03). 12% preferred return and greater-of1.65×MOIC/12%IRR redemption hurdle.

S8 - 2G supplier announcement (2026-09-23). 275 MW equipment order; Q4 2027-Q3 2028 deliveries.

S9 - NRGV Rolls-Royce MTU financing announcement (2026-09-10). Separate supplier procurement and dedicated financing; not proof of 2G funding.

S10 - NRGV Goshe acquisition announcement (2026-09-22). Two ready-to-build projects, Q1 2028 target, 30M annual project EBITDA, up to 40M facility commitment and 200M+ exit-2028 platform goal.

S11 - Parmantier research release (2026-09-25). Attributed procurement/financing concerns; target price and recommendation not adopted.

Outer-year projects, margins and financing are LOW confidence. The latest 200M+ exit-2028 project EBITDA target is not current consolidated earnings, and the much larger2030 presentation opportunity is not a funded forecast.

Workbook: v3_2_master_portfolio.xlsx, model tab NRGV_Q_Model, portfolio row 87. Goshe probability and bridge: X4:AH34. It owns portfolio ranking, prices and return calculations; those are intentionally outside this artifact. **Current artifact path:** G:\My Drive\1amInvesting\Artifacts\NRGV_EnergyVault_DeepDive.md. **Recoverable prior edition:** versions/2026-09-30_Muse_0805/NRGV/. This update preserves the pre-existing 15x economic operating-profit method, quarterly window, share schedule and both Base scores. Separate September 30 proposed breadcrumb artifacts are not incorporated.
